

Internship in aquaculture R&D

Matis is an Icelandic food and biotech R&D company, which supports customers in the fields of value creation, food safety, public health, sustainability and aquaculture with over 100 employees. We are also the Icelandic National Reference Lab, which educates students and offers analytical and consultancy services.

Are you looking for experience in aquaculture, nutrition, RAS and fish & shrimp husbandry?

- If you are a student at university, you can take part in ground-breaking aquaculture projects
- Work with a wide range of species used in aquaculture
- Experience Icelandic culture and nature in your free time, visit a volcano or see the northern lights

You will be involved in:

- Feed production and animal husbandry
- Running and maintenance of RAS systems
- Monitoring water quality and achieving optimal conditions for aquatic animals
- Collecting data on growth, histology, gut microbiome and blood samples
- Planning and carrying out aquaculture experiments

What you will get:

- Free accommodation
- Free breakfast and lunch
- Free public transport
- Unique experiences in the land of fire and ice

If you are interested, please contact:

Georges Lamborelle, Aquaculture Station Manager
