Index by areas of study

I. Applied Computer Science (M.Sc.)

At least 120 C must be successfully completed.

(Please note: this is a non-official English translation of the official module directory which is available at the following website: https://www.uni-goettingen.de/de/40964.html)

1. Core subject studies

Modules of at least 30 C must be successfully completed in accordance with the following regulations.

a. Group 1

At least two of the following modules totalling at least 10 C must be successfully completed:

Table of Contents

b. Group 2

At least one of the following modules totalling at least 5 C must be successfully completed.

c. Group 3

Furthermore, the following modules may be completed; only one of the modules M.Inf.1101 and
M.Inf.1102 is allowed to be completed:

Table of Contents

2. Area of professionalisation

Modules totalling at least 60 C must be successfully completed in accordance with the following regulations.

a. Specialisation

One of the following specialisations totalling at least 48 C must be successfully completed in accordance with the regulations listed in II. to XII.

- Bioinformatics
- Data Science
- Digital Humanities
- Geoinformatics
- Ecological Informatics
- Medical Informatics
- Computational Neuroscience
- Information Technology Law
- Business Information Systems
- Scientific Computing
- Applied System Engineering
- Applied System Engineering with Minor Subject in one of the applied computer sciences

b. Key Competencies

Modules totalling at least 12 C must be successfully completed in accordance with the following regulations.

aa. Profession-specific Key Competencies (elective compulsory modules)

At least one of the following modules totalling at least 6C must be successfully completed.

bb. Interdisciplinary Key Competencies (elective modules)

Modules from the university-wide module list of key competencies or the examination regulations for study programmes of the Central Institute for Languages and Transferable Skills (ZESS) or modules recognised as equivalent by the examination board can be taken, provided that they are in line with the study objectives. This is decided by the examination board.

3. Master's thesis

The successful completion of the Master's thesis will earn 30 C.

II. Specialisation "Bioinformatics"

1. Prerequisites

Relevant previous knowledge of at least 30 C, of which at least 15 C in the subject area "Bioinformatics" and at least 13 C in the subject area "Biology", including at least 10 C in molecular biology.

2. Elective compulsory modules

Modules totalling at least 48 C must be successfully completed in accordance with the following regulations. The following two subject areas must be successfully completed.

a. Subject area "Bioinformatics" (at least 24 C)

aa. Group 1

The following module of 12 C must be successfully completed:

bb. Group 2

At least one of the following modules totalling at least 12 C must be successfully completed:

cc. Group 3

Furthermore, the following modules may be completed:

b. Subject area "Biology" (at least 18 C)

aa. Group 1

At least one of the following modules totalling at least 6 C must be successfully completed:

bb. Group 2

Furthermore, the following elective modules in this subject area may be completed:

III. Specialisation "Digital Humanities"

Modules totalling at least 48 C must be successfully completed in accordance with the following regulations.

1. Fundamentals

Two of the following elective modules with a total of 12 C must be successfully completed if their competencies have not already been acquired elsewhere. Only one of the modules B.DH.01 and B.DH.01a and only one of the modules B.DH.02 and B.DH.02a can be completed.

2. Strategies and Methods

At least one of the following modules totalling at least 6 C must be successfully completed. The completion of the module M.DH.01 is recommended.

3. Theories and Research Questions

At least one of the following modules totalling at least 9 C must be successfully completed:

4. Project

At least one of the following modules totalling at least 9 C must be successfully completed:

IV. Specialisation "Ecological Informatics"

1. Prerequisites

Relevant previous knowledge of at least 30 C, of which at least 15 C in the subject area "Ecological Informatics" and at least 15 C in the subject area "Forest Sciences/Forest Ecology".

2. Elective compulsory modules

Modules totalling at least 48 C must be successfully completed in accordance with the following regulations. The following two subject areas must be successfully completed.

a. Subject area "Ecological Informatics" (at least 18 C)

aa. Group 1

One of the following modules totalling at least 6 C must be successfully completed:

bb. Group 2

At least one of the following modules totalling at least 6 C must be successfully completed:

cc. Group 3

Furthermore, the following modules may be completed:

b. Subject area "Forest Sciences/Forest Ecology" (at least 12 C)

aa. Group 1

The following module of 9 C must be successfully completed:

bb. Group 2

At least one of the following modules totalling at least 3 C must be successfully completed:

V. Specialisation "Medical Informatics"

1. Prerequisites

Relevant previous knowledge of at least 30 C, of which at least 15 C in the subject area "Medical Informatics" and at least 15 C in the subject area "Health Care System".

2. Elective compulsory modules

Modules totalling at least 48 C must be successfully completed in accordance with the following regulations. The following two subject areas must be successfully completed.

a. Subject area "Medical Informatics" (at least 24 C)

aa. Group 1

bb. Group 2

b. Subject area "Health Care System" (at least 24 C)

VI. Specialisation "Computational Neuroscience"

1. Prerequisites

Relevant previous knowledge of at least 30 C, of which at least 15 C in the subject area "Computational Neuroscience" and at least 15 C in the subject area of "Mathematics/Natural Sciences".

2. Elective compulsory modules

Modules totalling at least 48 C must be successfully completed in accordance with the following regulations. The following two subject areas must be successfully completed.

a. Subject area "Computational Neuroscience" (at least 18 C)

aa. Group 1

bb. Group 2

Table of Contents

b. Subject area "Mathematics/Natural Sciences" (at least 18 C)

aa. Group 1

At least two of the following modules totalling at least 6 C must be successfully completed:

bb. Group 2

Furthermore, the following modules may be completed:

VII. Specialisation "Information Technology Law"

Modules totalling at least 48 C must be successfully completed in accordance with the followingregulations. The following two subject areas must be successfully completed.

1. Subject area "Information Technology Law" (at least 24 C)

Modules totalling at least 24 C must be successfully completed in accordance with the following regulations.

a. Compulsory module

The following module of 12 C must be successfully completed.

b. Elective compulsory modules

At least two of the following modules totalling at least 12 C must be successfully completed.

c. Elective modules

Furthermore, the following modules may be completed.

2. Subject area "Jurisprudential Foundations" (at least 10 C)

Modules totalling at least 10 C must be successfully completed in accordance with the following regulations.

a. Elective compulsory modules I

At least one of the following modules totalling at least 4 C must be successfully completed:

b. Elective compulsory modules II

At least one of the following modules totalling at least 6 C must be successfully completed:

c. Elective modules

Furthermore, the following modules may be completed:

VIII. Specialisation "Business Information Systems"

1. Prerequisites

Relevant previous knowledge of at least 30 C, of which at least 15 C in the subject area "Business Information Systems" and at least 15 C in the subject area "Business Administration".

2. Elective compulsory modules

Modules totalling at least 48 C must be successfully completed in accordance with the following regulations. The following two subject areas must be successfully completed.

a. Subject area "Business Information Systems" (at least 24 C)

aa. Group 1

At least one of the following modules totalling at least 12 C must be successfully completed:

bb. Group 2

At least two of the following modules totalling at least 12 C must be successfully completed:

b. Subject area "Business Administration" (at least 24 C)

aa. Group 1

The following module of 18 C must be successfully completed:

bb. Group 2

At least one of the following modules totalling at least 6 C must be successfully completed:

IX. Specialisation "Scientific Computing"

1. Prerequisites

Relevant previous knowledge of at least 30 C, of which at least 15 C in the subject area "Scientific Computing" and at least 15 C in the subject area "Mathematics/Natural Sciences".

2. Elective compulsory modules

Modules totalling at least 48 C must be successfully completed in accordance with the following regulations. The following two subject areas must be successfully completed.

a. Subject area "Scientific Computing" (at least 21 C)

At least two of the following modules totaling at least 21 C must be successfully completed. Only one of the modules M.Inf.1200 and M.Inf.1208 is allowed to be completed:

b. Subject area "Mathematics/Natural Sciences" (at least 21 C)

Table of Contents

X. Specialisation "Data Science"

Modules totalling at least 48 C must be successfully completed in accordance with the following regulations. The following two subject areas must be successfully completed.

1. Subject area "Data Science" (at least 21 C)

Modules totalling at least 21 C must be successfully completed in accordance with the following regulations.

a. Elective compulsory modules

At least two of the following modules totalling at least 10 C must be successfully completed:

b. Research project

Exactly one of the following modules with a minimum of 6 C and a maximum of 12 C must be successfully completed:

c. Elective modules

Furthermore, the following modules may be completed:

2. Subject area "Domain-specific Knowledge"

One of the following four module packages totalling at least 18 C must be successfully completed:

a. Module package "Bioinformatics" (at least 18 C)

At least two of the following modules totalling at least 18 C must be successfully completed:

b. Module package "Digital Humanities" (18 C)

Modules totalling at least 18 C must be successfully completed in accordance with the following regulations.

aa. Fundamental modules

It is recommended to take the modules "Introduction to Computational Text and Language Analysis" and "Introduction to Digital Visual Culture" if their competencies have not already been acquired elsewhere. Only one of the modules B.DH.01 and B.DH.01a as well as only one of the modules B.DH.02 and B.DH.02a can be taken. The completion of the module M.DH.01 is recommended.

bb. Advanced modules

Furthermore, the following modules may be completed:

c. Module package "Computational Neuroscience" (at least 18 C)

Modules totalling at least 18 C must be successfully completed in accordance with the following regulations.

aa. Group 1

The following module of 3 C must be successfully completed:

bb. Group 2

At least two of the following modules totalling at least 15 C must be successfully completed:

d. Module package "Mathematics" (at least 18 C)

At least two modules totalling at least 18 C must be successfully completed. Modules can be selected from the following cycles of the teaching unit mathematics

- Optimisation
- Inverse problems
- Image and geometry processing
- Scientific computing/applied mathematics
- Applied and mathematical stochastics
- Statistical modelling and inference
- Multivariate statistics
- Statistical foundations of data science

Additionally, the following modules can be selected:

XI. Specialisation "Applied System Engineering with Minor Subject"

Modules totalling at least 48 C must be successfully completed in accordance with the following regulations.

1. Minor Subjects

One minor subject totalling at least 30 C must be successfully completed in accordance with the following regulations.

a. Bioinformatics

aa. Prerequisites

Relevant previous knowledge of at least 30 C, of which at least 15 C in the subject area "Bioinformatics" and at least 13 C in the subject area "Biology", including at least 10 C in molecular biology.

bb. Elective compulsory modules

Modules totalling at least 30 C must be successfully completed in accordance with the following regulations. The following two subject areas must be successfully completed.

i. Subject area "Bioinformatics" (at least 18 C)

At least two of the following modules totalling at least 18 C must be successfully completed:

Table of Contents

ii. Subject area "Biology" (at least 12 C)

A total of at least 12 C must be successfully completed in accordance with the following regulations.

A. Group 1

At least one of the following modules totalling at least 6 C must be successfully completed:

B. Group 2

Furthermore, the following modules may be completed:

b. Digital Humanities

Modules totalling at least 30 C must be successfully completed in accordance with the following regulations.

aa. Fundamental modules

It is recommended to take the modules "Introduction to Computational Text and Language Analysis" and "Introduction to Digital Visual Culture" if their competencies have not already been acquired elsewhere. Only one of the modules B.DH.01 and B.DH.01a as well as only one of the modules B.DH.02 and B.DH.02a can be taken. The completion of the module M.DH.01 is recommended.

bb. Advanced modules

At least two of the following modules totalling at least 12 C must be successfully completed.

c. Geoinformatics

aa. Prerequisites

Table of Contents

B. Group 2

At least two of the following modules totalling at least 12 C must be successfully completed:

ii. Subject area "Forest Sciences/Forest Ecology" (at least 12 C)

Modules totalling at least 12 C must be successfully completed in accordance with the following regulations.

A. Group 1

The following module of 9 C must be successfully completed:

B. Group 2

At least one of the following modules totalling at least 3 C must be successfully completed:

e. Medical Informatics

aa. Prerequisites

Relevant previous knowledge of at least 30 C, of which at least 15 C in the subject area "Medical Informatics" and at least 15 C in the subject area "Health Care System".

bb. Elective compulsory modules

Modules totalling at least 30 C must be successfully completed in accordance with the following regulations. The following two subject areas must be successfully completed.

i. Subject area "Medical Informatics" (at least 18 C)

At least three of the following modules totalling at least 18 C must be successfully completed:

ii. Subject area "Health Care System" (at least 9 C)

At least one of the following modules totalling at least 9 C must be successfully completed:

f. Computational Neuroscience

aa. Prerequisites

Relevant previous knowledge of at least 30 C, of which at least 15 C in the subject area "Computational Neuroscience" and at least 15 C in the subject area "Mathematics/Natural sciences".

bb. Elective compulsory modules

Modules totalling at least 30 C must be successfully completed in accordance with the following regulations. The following two subject areas must be successfully completed.

i. Subject area "Computational Neuroscience" (at least 11 C)

Modules totalling at least 11 C must be successfully completed in accordance with the following regulations.

A. Group 1

The following modules totalling 7 C must be successfully completed:

B. Group 2

At least one of the following modules totalling at least 4 C must be successfully completed:

ii. Subject area "Mathematics and Natural Sciences" (at least 9 C)

Modules totalling at least 9 C must be successfully completed in accordance with the following regulations.

A. Group 1

At least two of the following modules totalling at least 6 C must be successfully completed:

B. Group 2

Furthermore, the following modules may be completed:

g. Information Technology Law

Modules totalling at least 30 C must be successfully completed in accordance with the following regulations. The following two subject areas must be successfully completed.

aa. Subject area "Information Technology Law" (at least 12 C)

Modules totalling at least 12 C must be successfully completed in accordance with the following regulations.

i. Elective compulsory modules

At least two of the following modules totalling at least 12 C must be successfully completed.

ii. Elective modules

Furthermore, the following modules may be completed:

bb. Subject area "Jurisprudential Foundations" (at least 10 C)

Modules totalling at least 10 C must be successfully completed in accordance with the following regulations.

i. Elective compulsory modules I

At least one of the following modules totalling at least 4 C must be successfully completed

ii. Elective compulsory modules II

At least one of the following modules totalling at least 6 C must be successfully completed.

h. Business Information Systems

aa. Prerequisites

Relevant previous knowledge of at least 30 C, of which at least 15 C in the subject area "Business Information Systems" and at least 15 C in the subject area "Business Administration".

bb. Elective compulsory modules

Modules totalling at least 30 C must be successfully completed in accordance with the following regulations. The following two subject areas must be successfully completed.

i. Subject area "Business Information Systems" (at least 18 C)

Modules totalling at least 18 C must be successfully completed in accordance with the following regulations.

A. Group 1

At least one of the following modules totalling at least 12 C must be successfully completed:

B. Group 2

One of the following modules of 6 C must be successfully completed:

ii. Subject area "Business Administration" (at least 12 C)

i. Scientific Computing

aa. Prerequisites

Relevant previous knowledge of at least 24 C, of which at least 12 C in the subject area "Scientific Computing" and at least 12 C in the subject area "Mathematics/Natural Sciences".

bb. Elective compulsory modules

Modules totalling at least 30 C must be successfully completed in accordance with the following regulations. The following two subject areas must be successfully completed.

i. Subject area "Scientific Computing" (at least 15 C)

At least two of the following modules totalling at least 15 C must be successfully completed:

Table of Contents

ii. Subject area "Mathematics and Natural Sciences" (at least 15 C)

At least two of the following modules totalling at least 15 C must be successfully completed:

Table of Contents

2. Subject area "System-oriented Informatics"

At least two of the following modules totalling at least 18C must be successfully completed.

XII. Specialisation "Applied System Engineering"

Modules totalling at least 48 C must be successfully completed in accordance with the following regulations.

1. Module packages

One of the following five module packages of at least 30C must be successfully completed. For the module package "Basics of Ecological Informatics", the following prerequisites have to be met: achievements of at least 6 C in in the field of nature conservation and spatial information systems.

a. Module package "Specific Application Systems" (at least 30 C)

Modules totalling at least 30 C must be successfully completed in accordance with the following regulations.

aa. Group 1

At least one of the following modules totalling at least 5 C must be successfully completed.

bb. Group 2

At least one of the following modules totalling at least 5 C must be successfully completed.

Table of Contents

cc. Group 3

At least one of the following modules totalling at least 5 C must be successfully completed. Only one of the modules M.Inf.1101 and M.Inf.1102 is allowed to be completed.

b. Module package "Basics of Bioinformatics" (at least 30 C)

Modules totalling at least 30 C must be successfully completed in accordance with the following regulations.

aa. Group 1

At least two of the following modules totalling at least 16 C must be successfully completed.

bb. Group 2

The following modules totalling 12 C must be successfully completed.

cc. Group 3

Furthermore, the following modules may be completed:

c. Module package "Basics of Business Information Systems" (at least 30 C)

Modules totalling at least 30 C must be successfully completed in accordance with the following regulations.

aa. Group 1

At least two of the following modules totalling at least 12 C must be successfully completed.

Table of Contents

bb. Group 2

At least two of the following modules totalling at least 12 C must be successfully completed.

d. Module package "Basics of Computational Neuroscience" (at least 30 C)

Modules totalling at least 30 C must be successfully completed in accordance with the following regulations.

aa. Group 1

The following modules totalling 10 C must be successfully completed.

bb. Group 2

At least two of the following modules totalling at least 20 C must be successfully completed.

e. Module package "Basics of Ecological Informatics" (at least 30 C)

Modules totalling at least 30 C must be successfully completed in accordance with the following regulations.

aa. Group 1

The following module of 6 C must be successfully completed.

bb. Group 2

At least three of the following modules totalling at least 18 C must be successfully completed:

cc. Group 3

Furthermore, the following modules may be completed:

2. System-oriented Informatics

At least two of the following modules totalling at least 18C must be successfully completed.

XIII. Module packages "Computer Science" of 36 C or 18 C

(only available in another suitable Master's programme)

1. Zugangsvoraussetzungen

For the module packages „Computer Science" of 36 C or 18 C, the following prerequisites apply:

Proof of achievements in fundamentals of computer science totalling at least 30 C. Proof of achievements in fundamentals of mathematics totalling at least 18 C. Proof of programming knowledge totalling at least 5 C. Proof of further achievements in computer science totalling at least 10 C.

2. Module package "Computer Science" of 36 C

a. Study objectives

Basic objective is to develop the ability to carry out independent scientific work in the field of system-oriented informatics. Furthermore, the knowledge in one of the fields of theoretical computer science, software engineering, databases or computer networks should be deepened, as well as competences in dealing with current scientific literature in this field should be acquired.

b. Overview of modules

From the following offer, modules totalling at least 36 C must be successfully completed.

aa. Elective Compulsory Modules A

The following modules are recommended:

bb. Elective Compulsory Modules B

Furthermore, all modules according to section I point 1 ("Core Subject Studies") of the M.Sc. programme "Applied Computer Science" may be chosen.

3. Module package "Computer Science" of 18 C

a. Study objectives

The basic objective is to develop the ability to carry out independent scientific work in the field of system-oriented informatics. For this purpose advanced competences in system-oriented informatics, e.g. dealing with current scientific literature, should be acquired.

b. Overview of modules

From the following offer, modules totalling at least 18 C must be successfully completed.

aa. Elective Compulsory Modules A

The following modules are recommended:

bb. Elective Compulsory Modules B

Furthermore, all modules according to section I point 1 ("Core Subject Studies") of the M.Sc. programme "Applied Computer Science" may be chosen.

XIV. Forms of examination

As far as module descriptions are published in English in this module directory, the following classification applies to the forms of examination used:

Oral exam = mündliche Prüfung [§ 15 Abs. 8 APO]

- Written exam = Klausur [§ 15 Abs. 9 APO]
- Term paper = Hausarbeit [§ 15 Abs. 11 APO]
- Presentation = Präsentation [§ 15 Abs. 12 APO]
- Presentation with written elaboration/report = Präsentation mit schriftlicher Ausarbeitung [§ 15 Abs. 12 APO]
- Practical examination = praktische Prüfung [§ 15 Abs. 13 APO]

APO = Allgemeinen Prüfungsordnung für Bachelor- und Master-Studiengänge sowie sonstige Studienangebote an der Universität Göttingen (English: "General examination regulations for Bachelor's and Master's programmes and other programmes offered at the University of Göttingen")

Georg-August-Universität Göttingen	8 C
Module B.Bio-NF.102: Lecture series biology II	6 WLH

Learning outcome, core skills:	**Workload:**
The students get an insight into the fields of Biology to assure a common basic level of knowledge for constitutive modules. They acquire basic knowledge of biochemistry, genetics, bioinformatics, developmental biology, microbiology and plant physiology.	Attendance time: 84 h Self-study time: 156 h

Course: Biologische Ringvorlesung II	6 WLH
Contents:	

Examination: Written examination (120 minutes) **Examination requirements:** Basic knowledge in the fields Developmental Biology, Microbiology and Plant Physiology. This comprises concepts in Developmental Biology and the established model organisms in this field; diversity, importance and organization of microorganisms, growth and reproduction, types of microbial metabolism; basics in Plant physiology like photosynthesis, water transport, plant hormones and plant reproduction.	4 C
Examination: Written examination (120 minutes) **Examination requirements:** Basic knowledge in the fields Biochemistry, Genetics and Bioinformatics. This comprises chemical structures of carbohydrates, proteins, fats, as well as basic knowledge in the central metabolic pathways like glycolysis, citric acid cycle and redox reactions, respiratory chain, degradation of proteins, the urea cycle, digestive enzymes, the structure of DNA and RNA, transcription and translation, principles in inheritance and gene regulation for pro- and eucaryotes; basics in Bioinformatics regarding algorithms for alignments and reconstruction of phylogenetic trees.	4 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: German	**Person responsible for module:** Prof. Dr. Stefanie Pöggeler
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 10	

Additional notes and regulations:
Exclusion: The combination of this module with module B.Bio.102 is not possible (for students in BSc Biologie, BSc Biological Diversity and Ecology, Two-Subjects-Bachelor Biology)

Georg-August-Universität Göttingen	6 C
Module B.Bio-NF.112: Biochemistry	4 WLH

Learning outcome, core skills:	Workload:
Students acquire basic knowledge of biochemical substances and an overview over elementary principles of biochemical reactions and learn the application of biochemical methods. They get insight into the basics of protein chemistry and genetics: DNA, RNA, enzymes, carbohydrates, lipids and cell membranes; basics of metabolism and signal transduction.	Attendance time: 56 h Self-study time: 124 h

Course: Grundlagen der Biochemie (Lecture)	4 WLH
Examination: Written examination (90 minutes) **Examination requirements:** Basic knowledge of biochemical reactions and its components as well as biochemical methods. Anabolism and catabolism of amino acids, carbohydrates, lipids and nucleic acids; synthesis and function of macromolecules; generation and accumulation of metabolic energy.	6 C

Admission requirements: none	Recommended previous knowledge: Basic knowledge in Biology
Language: German	**Person responsible for module:** Dr. rer. nat. Ellen Hornung
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 3 - 5
Maximum number of students: 20	

Additional notes and regulations:
The combination of this module with module B.Bio.112 is not possible.

Georg-August-Universität Göttingen	6 C
Module B.Bio-NF.116: General developmental and cell biology	4 WLH

Learning outcome, core skills:	Workload:
The students learn about developmental aspects in cell biology; fundamental topics in developmental biology of animals and plants; classic and molecular-biological methods in developmental biology and model organisms.	Attendance time: 56 h Self-study time: 124 h

Course: Allgemeine Entwicklungs- und Zellbiologie (Lecture)	4 WLH
Examination: Written examination (90 minutes) **Examination requirements:** Students should be able to assess validity of statements, answer random control questions and describe and compare fundamental aspects from the fields: structure and compartments of cells, cytoskeleton, mitochondria, membrane structure and transport, contact and communication between cells, cell cycle, cell division, apoptosis, control of gene expression in eukaryotes, mechanisms in development, germ cells and fertilization, cleavage, principles in pattern formation, morphogenesis, gastrulation, neurulation, genesis of organs, cellular movement and shaping, methods from experimental embryology and developmental genetics, model organisms, formation of axis, genes for segmentation, homeotic selection genes, evolutionary developmental biology, neuronal development, stem cells and regeneration, homeostasis, origination of cancer, embryogenesis of plants, dormancy and germination, light dependent development, phytohormones, evolution and genetics during flower formation.	6 C

Admission requirements:	Recommended previous knowledge:
none	Basic knowledge in Biology
Language: German	**Person responsible for module:** Prof. Dr. Ernst A. Wimmer
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 3 - 5
Maximum number of students: 25	

Additional notes and regulations:
The combination of this module with module B.Bio.116 is not possible.

Georg-August-Universität Göttingen **Module B.Bio-NF.118: Microbiology**	6 C 4 WLH

Learning outcome, core skills: Students acquire fundamental knowledge in systematics, cell biology, growth and reproduction, variety of metabolisms and the ecological, medical and biotechnological relevance of microorganisms. After passing the module, the students have the ability to differentiate microorganisms and know important biotechnological processes and mechanisms pathogens use to attack their hosts.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Allgemeine Mikrobiologie (Lecture)	4 WLH
Examination: Written examination (120 minutes) **Examination requirements:** In the examination, basics in microbiology are addressed concerning the systematic classification, various metabolic pathways, cell biology, the relevance of microorganisms to the industry, the environment and medicine and their application in these fields. The students should be able to assess current events related to microbiology.	6 C

Admission requirements: none	**Recommended previous knowledge:** Basic knowledge in Biology
Language: German	**Person responsible for module:** Prof. Dr. Jörg Stülke
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 4 - 6
Maximum number of students: 15	

Additional notes and regulations: The combination of this module with module B.Bio.118 is not possible.

Georg-August-Universität Göttingen **Module B.Bio-NF.123: Animal physiology**	6 C 4 WLH

Learning outcome, core skills: The students acquire comprehension for structure and function of nerve cells, glia cells, sensory cells and sensory organs; also comprehension for the principles of central processing of sensory information. They gain insight into the function of hormone systems and different vegetative functions like respiration, energy balance, digestion and excretion. The students gain insight into the complex interaction of physiological performances of the nervous, sensory and vegetative systems and thereby learn to appraise physiological reactions of animals. They learn to assess the relevance of single physiological performances for the whole organism and to better understand its adaptability to existing environmental conditions.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Tierphysiologie (Lecture)	4 WLH
Examination: Written examination (120 minutes) **Examination requirements:** The students should be able to validate statements on animal physiological facts and relationships in the fields neuro-, sensory and vegetative physiology; they should be able to answer random questions on function of sensory cells, neurons and organs regarding physiological aspects; they should have the ability to correctly describe and compare basics and the activity of physiological processes.	6 C

Admission requirements: 2-F-BA: at least 20 C from the orientation modules	**Recommended previous knowledge:** Basic knowledge in Biology
Language: German	**Person responsible for module:** apl. Prof. Dr. Andreas Stumpner Prof. Dr. Andre Fiala
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 3 - 5
Maximum number of students: 25	

Additional notes and regulations: The combination of this module with module B.Bio.123 is not possible.

Georg-August-Universität Göttingen	6 C
Module B.Bio-NF.125: Cell and molecular biology of plants	4 WLH

Learning outcome, core skills:	**Workload:**
The students gain insight into the characteristics of plant cells, learn to know the relation between structure and function of organelles and the cell wall and get an overview of transport processes and intracellular signal transduction. They learn to know the model plant Arabidopsis thaliana and acquire knowledge in biosynthesis, signal transduction, effects of phytohormones and the molecular methods for adaption of plants to different abiotic and biotic stress factors. The students get an overview of current facts of phylogeny and biotechnology of algae.	Attendance time: 56 h Self-study time: 124 h

Course: Zell- und Molekularbiologie der Pflanze (Lecture)	4 WLH
Examination: Written examination (75 minutes) **Examination requirements:** Arabidopsis thaliana as model organism for research on cell- and molecular processes; methods for research on cell- and molecular processes; mechanisms of protein transport in different cell organelles and into the cell wall; mechanisms of signal transduction in plants; mechanisms of plant immunity.	6 C

Admission requirements: none	**Recommended previous knowledge:** Basic knowledge in Biology
Language: German	**Person responsible for module:** Prof. Dr. Christiane Gatz
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 3 - 5
Maximum number of students: 15	

Additional notes and regulations:
The combination of this module with module B.Bio.125 is not possible.

Georg-August-Universität Göttingen	6 C
Module B.Bio-NF.126: Ecology of animals and plants	3 WLH

Learning outcome, core skills:	**Workload:**
After passing the module the students have knowledge in the following fields and have the ability to interrelate these to each other: Basics in plant and animal ecology; ecophysiology of higher and lower plants; aut- and synecology; ecosystem research and ecology of soil systems.	Attendance time: 56 h Self-study time: 124 h

Course: Ökologie (Lecture)	3 WLH
Examination: Written examination (90 minutes) **Examination requirements:** Abiotic environmental conditions; biotic interactions; coevolution; the relevance of the factor "resource"; ecological niche; population models; regulation of populations; relation of populations; competitors; predation; herbivory; mutualism; symbiosis; ecosystems; succession; diversity and disruption; nutrition networks; definition of an individual; Genet- Ramet concept; r-K-concept; case study "Global Change".	6 C

Admission requirements: 2-F-BA: at least 20 C from the orientation modules	**Recommended previous knowledge:** Basic kowledge in Biology
Language: German	**Person responsible for module:** Prof. Dr. Stefan Scheu
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 3 - 5
Maximum number of students: 15	

Additional notes and regulations:
The combination of this module with module B.Bio.126 is not possible.

Georg-August-Universität Göttingen	6 C
Module B.Bio-NF.127: Evolution and systematics of plants	4 WLH

Learning outcome, core skills:	Workload:
The students acquire basic knowledge in evolution, phylogenetic history, systematics and ecology of terrestrial plants (focus on flowering plants). They learn about the spectrum of methods for the reconstruction of the evolution of land plants in time and location and methods for the systematical classification and denotation.	**Attendance time:** 56 h **Self-study time:** 124 h

Course: Evolution und Systematik der Pflanzen (Lecture)	4 WLH

Examination: Written examination (60 minutes) **Examination requirements:** In the written examination, the students should be able to validate statements on the evolution and systematics of terrestrial plants and the spectrum of methods for reconstruction of evolution. They should have the ability to answer questions on these topics and also on basics in taxonomy and nomenclature.	6 C

Admission requirements:	Recommended previous knowledge:
2-F-BA: at least 20 C from the orientation modules	Basic knowledge in Biology
Language: German	**Person responsible for module:** Prof. Dr. Elvira Hörandl
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 4 - 6
Maximum number of students: 15	

Additional notes and regulations:
The combination of this module with module B.Bio.127 is not possible.

Georg-August-Universität Göttingen	6 C
Module B.Bio-NF.128: Evolution and systematics of animals	5 WLH

Learning outcome, core skills:	Workload:
The students acquire the ability to comprehend basic concepts and the way of thinking of the ecological, evolution biological and systematic research. The students learn to know the abundance of structures and phylogenetic relations in selected groups of animals.	Attendance time: 70 h Self-study time: 110 h

Course: Phylogenetisches System und Evolution der Tiere (Lecture)	5 WLH
Examination: Written examination (60 minutes) **Examination requirements:** Phylogeny and evolution of animals; basics in biological systematics (morphological and molecular methods); abundance of structures and phylogenetic relations of selected groups of animals; knowledge in systematics and biology of animal taxa; skills in systematic classification of animals in particular from indigenous biocoenoses.	6 C

Admission requirements:	Recommended previous knowledge:
2-F-BA: at least 20 C from the orientation modules	Basic knowledge in Biology
Language: German	**Person responsible for module:** Prof. Dr. Christoph Bleidorn
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 4 - 6
Maximum number of students: 15	

Additional notes and regulations:
The combination of this module with module B.Bio.128 is not possible.

Georg-August-Universität Göttingen	6 C
Module B.Bio-NF.129: Genetics and microbial cell biology	4 WLH

Learning outcome, core skills:	**Workload:**
The students gain basic knowledge of classic and molecular genetics and cell biology as well as an overview of genetic, molecular and cellular biological methods and model organisms. They get an insight into inheritance of genetic information and the complex regulation of gene expression, After passing the module they should have the ability to understand how the development and morphology of single and multicellular organisms are regulated by genes and how genes influence the structure and function of cells.	Attendance time: 56 h Self-study time: 124 h

Course: Genetik und mikrobielle Zellbiologie (Lecture)	4 WLH
Examination: Written examination (90 minutes) **Examination requirements:** The students should be able to answer random questions from the fields of genetic and cell biology and to validate statements on genetic and cellular biological facts and relations. The basis for these abilities is the content of the lecture and the answering of a catalog of questions with the help of the accompanying tutorials. For the genetics prat, the lecture is based on the book Watson, 6th Edition, Molecular Biology of the Gene (Pearson) and for the cell biology part on selected chapters from the book Alberts et al., 5th Edition, Molecular Biology of the Cell (Garland Science).	6 C

Admission requirements: none	**Recommended previous knowledge:** Basic knowledge in Biology
Language: German	**Person responsible for module:** Prof. Dr. Gerhard Braus
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 4 - 6
Maximum number of students: 15	

Additional notes and regulations:
The combination of this module with module B.Bio.129 is not possible.

Georg-August-Universität Göttingen	10 C
Module B.Bio.113: Applied bioinformatics	7 WLH

Learning outcome, core skills:	**Workload:**
After passing the module the students will understand the structure of most databases in bioscientific research and be able to critically assess their content. They will learn to structure biological data and transfer the data to a database scheme. Furthermore the students learn the application of bioinformatical methods in particular on sequence data, biological networks and expression data.	Attendance time: 98 h Self-study time: 202 h

Course: Einführung in die angewandte Bioinformatik (Lecture)	4 WLH
Examination: Written examination (90 minutes) **Examination prerequisites:** regular participation in the practical training and successful completion of three exercises **Examination requirements:** The students should know suitable sources of biomedical information available in the internet. They should be able to design and explain simple database schemes. The students should be familiar with measurements for critical assessment of bioinformatical methods; different methods for sequence comparison; reconstruction of phylogenetic trees; application of concepts from information theory on the analysis of sequence data. The students should be able to describe basic characteristics and graph theoretical representations of biological networks and apply these concepts to data analysis.	10 C

Course: Internet-basierte Bioinformatik (Exercise)	3 WLH

Admission requirements: BSc Biology: at least 40 C from the first study period	**Recommended previous knowledge:** none
Language: German	**Person responsible for module:** Prof. Dr. Tim Beißbarth
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 3 - 5
Maximum number of students: 100	

Georg-August-Universität Göttingen **Module B.DH.01: Introduction to Computational Text and Language Analysis**	6 C 4 WLH

Learning outcome, core skills: Die Studierenden • haben einen Überblick über wesentliche Gegenstände und Problemstellungen der Computerphilologie und Computerlinguistik; • können Folgen und Perspektiven der digitalen Text- und Sprachanalyse einschätzen; • kennen zentrale Fragen der Digitalen Text- und Sprachwissenschaften, relevante Case Studies und die wichtigsten Werkzeuge zum Erstellen, Verwalten und Verarbeiten digitaler Daten (z.B. Werkzeuge zur linguistischen Analyse, OCR-Systeme, Korpusverwaltungstools).	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Einführung in die digitale Text- und Sprachanalyse (Lecture)	2 WLH
Examination: Written examination (90 minutes), not graded **Examination prerequisites:** regelmäßige Teilnahme am Tutorium sowie Ausarbeitung einer praktischen Anwendung im Umfang von max. 5 Seiten. **Examination requirements:** Die Studierenden weisen im Bereich der Text- und Sprachwissenschaft Kenntnisse spezifisch geisteswissenschaftlicher Fragestellungen, Vorgehensweisen und Forschungsergebnisse auf Grundlage digitaler Datenverarbeitung nach sowie die Fähigkeit, Methoden und Theoriebildungen in den Digital Humanities nachzuvollziehen und in Ansätzen zu reflektieren.	6 C

Course: Tutorium (Tutorial)	2 WLH

Admission requirements: none	**Recommended previous knowledge:** none
Language: German, English	**Person responsible for module:** Prof. Dr. Caroline Sporleder
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1 - 2
Maximum number of students: 25	

Additional notes and regulations: Das Modul B.DH.01 kann nicht gemeinsam mit dem Modul B.DH.01a belegt werden.

Georg-August-Universität Göttingen **Module B.DH.01a: Introduction to Computational Text and Language Analysis**	6 C 4 WLH

Learning outcome, core skills: The students • have an overview of the essential objects and problems of computational philology and computational linguistics; • are able to assess the consequences and perspectives of digital text and language analysis; • know central questions of digital text and linguistics, relevant case studies and the most important tools for creating, managing and processing digital data (e.g. tools for linguistic analysis, OCR systems, corpus management tools).	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Self-learning units (Video tutorials, ILIAS course, Exercises)	4 WLH
Examination: Written examination (90 minutes), not graded **Examination prerequisites:** Successful participation in the ILIAS course **Examination requirements:** In the field of text and linguistics, students demonstrate knowledge of specific humanities questions, procedures and research results on the basis of digital data processing as well as the ability to comprehend and reflect on methods and theories in the digital humanities.	6 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: German, English	**Person responsible for module:** Prof. Dr. Caroline Sporleder Prof. Dr. Jörg Wesche
Course frequency: each semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1

Additional notes and regulations: The module B.DH.01a cannot be taken together with the module B.DH.01.

Georg-August-Universität Göttingen	6 C
Module B.DH.02: Introduction to Digital Visual Culture	4 WLH

| **Learning outcome, core skills:**
Die Studierenden

• haben einen Überblick über wesentliche Gegenstände und Problemstellungen der Digitalen Bild- und Objektwissenschaft;
• können Folgen und Perspektiven der Digitalen Bild- und Objektanalyse einschätzen;
• kennen zentrale Fragen der Digitalen Bild- und Objektwissenschaft, relevante Case Studies und die wichtigsten Werkzeuge zum Erstellen, Verwalten und Verarbeiten digitaler Daten (z.B. Korpusbildung, Bildverarbeitung, 3D Erfassung, Bild- und Objektdatenbanken, quantifizierende Methoden, Virtual Heritage). | **Workload:**
Attendance time:
56 h
Self-study time:
124 h |

Course: Einführung in die Digitale Bild- und Objektiwssenschaft (Lecture)	2 WLH

Examination: Written examination (90 minutes), not graded **Examination prerequisites:** regelmäßige Teilnahme am Tutorium sowie Ausarbeitung einer praktischen Anwendung im Umfang von max. 5 Seiten. **Examination requirements:** Die Studierenden weisen im Bereich der Bild- und Objektwissenschaften Kenntnisse spezifisch geisteswissenschaftlicher Fragestellungen, Vorgehensweisen und Forschungsergebnisse auf Grundlage digitaler Datenverarbeitung nach sowie die Fähigkeit, Methoden und Theoriebildungen in den Digital Humanities nachzuvollziehen und in Ansätzen zu reflektieren.	6 C

Course: Tutorium (Tutorial)	2 WLH

Admission requirements: none	**Recommended previous knowledge:** none
Language: German, English	**Person responsible for module:** Prof. Dr. Martin Langner
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1 - 2
Maximum number of students: 25	

Additional notes and regulations: Das Modul B.DH.02 kann nicht gemeinsam mit dem Modul B.DH.02a belegt werden.

Georg-August-Universität Göttingen	6 C
Module B.DH.02a: Introduction to Digital Image and Artefact Science	4 WLH

Learning outcome, core skills:	Workload:
The students - have an overview of the essential objects and problems of digital image and object science; - are able to assess the consequences and perspectives of digital image and object analysis; - know central questions of digital image and object science, relevant case studies and the most important tools for creating, managing and processing digital data (e.g. corpus formation, image processing, 3D acquisition, image and object databases, quantifying methods, virtual heritage).	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Self-learning units (Video tutorials, ILIAS course, Exercises)	4 WLH
Examination: Written examination (90 minutes), not graded **Examination prerequisites:** Successful participation in the ILIAS course **Examination requirements:** In the field of image and artefact sciences, students demonstrate knowledge of specific humanities questions, procedures and research results based on digital data processing, as well as the ability to comprehend and reflect on methods and theories in the Digital Humanities.	6 C

Admission requirements: none	Recommended previous knowledge: none
Language: German, English	**Person responsible for module:** Prof. Dr. Martin Langner
Course frequency: each semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1

Additional notes and regulations:
The module B.DH.02a cannot be taken together with the module B.DH.02.

| Georg-August-Universität Göttingen | 9 C |
| Module B.DH.31: Strategies and Methods of Digital Text Analysis | 4 WLH |

Learning outcome, core skills:	Workload:
Die Studierenden	Attendance time:
	56 h
• vertiefen ihre Kenntnisse der Grundlagen- und Methodenforschung im Bereich der Textanalyse und Computerphilologie;	Self-study time:
	214 h
• sind in der Lage, textwissenschaftliche Forschungsfragen (z.B. aus den Bereichen quantitative Literaturwissenschaft, digitale Editorik, Stilometrie, Auswertung von Textarchiven im Hinblick auf kulturhistorische Fragestellungen, Evaluation automatischer und manueller Annotationen, Digitalisierungsstrategien für historische Daten) theoretisch zu durchdringen;	
• verstehen in Ansätzen die Komplexität und Heterogenität von textwissenschaftlichen Datenstrukturen;	
• können an ausgewählten Beispielen etablierte Verfahren der Digitalisierung, Analyse und Präsentation von Textdaten evaluieren und diskutieren;	
• wissen, welche digitalen Hilfsmittel für die Beschreibung und Interpretation von Mustern und Prozessen zur Beantwortung kulturhistorischer Fragestellungen am besten geeignet sind.	

| Course: Vorlesung (Lecture) | 2 WLH |

| Course: Seminar (Seminar) | 2 WLH |

Examination: Referat (max. 30 Min.) mit schriftlicher Ausarbeitung (max. 15 Seiten)	9 C
Examination prerequisites:	
regelmäßige Teilnahme am Seminar	
Examination requirements:	
Die Studierenden weisen vertiefte Kenntnisse in der digitalen Umsetzung einer spezifischen philologischen Fragestellung nach und können verschiedene Vorgehensweisen und Forschungsergebnisse nachvollziehen und reflektieren.	
Die Prüfungsleistung ist im Seminar zu erbringen.

Georg-August-Universität Göttingen **Module B.Forst.1101: Elements of forest botany**	6 C 4 WLH

Learning outcome, core skills: Das Modul gibt einen Überblick über Zellbiologie und funktionelle Anatomie von Gehölzen. Die Veranstaltungen umfassen die Einführung in den molekularen Bau der Zelle, die Bedeutung von Speicherstoffen, den Bau der Wurzel, des Stamm mit Schwerpunkt auf dem Transportsystem, der Anatomie von Blättern mit Besonderheiten der Anpassung an unterschiedliche Standorte sowie Aufbau und Funktion des Phloems und von Abschlussgeweben. Wichtige organismische Interaktionen, z.B. mit Mykorrhizapilzen werden eingeführt. In den Übungen wird der Inhalt der Vorlesungen anhand von Beispielen mittels mikroskopischer und histochemischer Techniken veranschaulicht. Die Studierenden erlernen ihre Beobachtungen objektiv zu beschreiben (Protokollführung). In dem Modul werden Kenntnisse über die Biologie einzelner Zellen bis hin zum ganzen Organismus an Hand von Bäumen und deren Besonderheiten vermittelt	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Grundlagen der Forstbotanik (Lecture)	2 WLH
Course: Übungen zur Forstbotanik (Exercise)	2 WLH
Examination: Written examination (120 minutes)	6 C

Examination requirements: Die Studierenden erbringen den Nachweis, dass sie Kenntnisse über die funktionelle Anatomie des Pflanzenkörpers und wichtige biologische Prozesse in Bäumen erworben haben und dieses Wissen wiedergeben können.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: German	**Person responsible for module:** Prof. Dr. Andrea Polle
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:** 1
Maximum number of students: not limited	

Georg-August-Universität Göttingen **Module B.Forst.1104: Forest zoology, wildlife biology and hunting science**	6 C 5 WLH

Learning outcome, core skills: Die Studierenden erwerben grundlegende Kenntnisse zu Systematik, Ökologie und Verhalten einheimischer Insekten und Wirbeltiere, über ihre Rolle in Waldökosystemen, ihre Nutzung, (jagdliche) Steuerung und Erhaltung, Habitatgestaltung, Jagdrecht, sowie Jagdmethodik.	**Workload:** Attendance time: 70 h Self-study time: 110 h

Course: Forstzoologie (Lecture, Exercise)	2 WLH
Course: Wildbiologie und Jagdkunde (Lecture)	2 WLH
Course: Jagdrecht (Lecture)	1 WLH
Examination: Written examination (100 minutes)	6 C

Examination requirements: Die Studierenden weisen grundlegende Kenntnisse über Systematik, Physiologie, Ökologie und Verhalten von Insekten im Kontext mit dem Ökosystem Wald nach.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: German	**Person responsible for module:** Prof. Dr. Niko Balkenhol
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:** 1
Maximum number of students: not limited	

Georg-August-Universität Göttingen	6 C
Module B.Forst.1106: Bioclimatology	4 WLH

Learning outcome, core skills:	**Workload:**
Verständnis der grundlegenden atmosphärischen Faktoren wie Wind, Strahlung, Lufttemperatur und -feuchte und ihres Einflusses auf den Wald, des Kohlenstoff- und Wasserkreislaufes auf lokaler bis globaler Skala sowie des Klimawandels.	Attendance time: 56 h Self-study time: 124 h

Course: Bioklimatologie (Lecture)	4 WLH
Examination: Written examination (90 minutes)	6 C

Examination requirements:
Nachweis, die wichtigsten Prozesse in der Atmosphäre und ihrer Wechselwirkung mit Vegetation verstanden zu haben; quantitative Analysen mit Hilfe von grundlegenden Gleichungen; Erstellen und Interpretation von Grafiken, die funktionale Zusammenhänge abbilden.

Admission requirements:	**Recommended previous knowledge:**
none	none
Language:	**Person responsible for module:**
German	Prof. Dr. Alexander Knohl
Course frequency:	**Duration:**
each summer semester	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**

NICHT-AMTLICHE FASSUNG

Georg-August-Universität Göttingen	6 C
Module B.Forst.1108: Soil science	4 WLH

Learning outcome, core skills:	Workload:
Einführung in die Bodenbildung und -entwicklung: Kentnisse der Bodenbildungsprozesse, Bodenentwicklung auf unterschiedlichen Ausgangssubstraten, Boden- und Standortseigenschaften, ökologische Bewertung von Böden. Grundlagen der Bodenbiogeochemie: Kentnisse der wichtigsten chemischen, biologischen und physikalischen Prozesse in Böden, Wechselwirkungen zwischen festen, flüssigen, gasförmigen und lebenden Phasen in Böden, Vertiefung der Kenntnisse über die Prozesse der Bodengenese.	Attendance time: 56 h Self-study time: 124 h

Course: Einführung in die Bodenbildung und -entwicklung (Lecture, Excursion, Exercise)	2 WLH
Course: Grundlagen der Bodenbiogeochemie (Lecture, Excursion, Exercise)	2 WLH
Examination: Written examination (120 minutes)	6 C

Examination requirements:	
Qualitative und quantitative Zusammenhänge der Bodenbildungsprozesse und Bodenbiogeochemie.	

Admission requirements: none	Recommended previous knowledge: Naturwissenschaftliche Grundlagen (B.Forst.1103)
Language: German	**Person responsible for module:** Prof. Dr. Yakov Kuzyakov
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:** 2
Maximum number of students: not limited	

Georg-August-Universität Göttingen	9 C
Module B.Forst.1110: Silviculture	6 WLH

Learning outcome, core skills:	**Workload:**
Die Studierenden kennen die Grundzüge des Wachstums von Bäumen und Beständen sowie der natürlichen Dynamik von Wäldern, können die Wirkungsweise von waldbaulichen Eingriffen erklären und kennen verschiedene Optionen zum naturnahen Management von Waldbeständen im Hinblick auf unterschiedliche Ziele.	Attendance time: 84 h Self-study time: 186 h

Course: Waldbau (Lecture)	6 WLH

Examination: Written examination (120 minutes)	9 C

Examination requirements:
Kenntnisse waldökologischer Zusammenhänge und ihrer Bedeutung für die Bewirtschaftung von Wäldern. Vertiefte Kenntnisse zu waldbaulicher Verfahren, insbesondere zu Möglichkeiten der Bestandesbegründung, -pflege und –verjüngung, Fähigkeit die Wirkungsweise waldbaulicher Maßnahmen auf der Grundlage eines gesicherten ökologischen Wissens zu erklären.

Admission requirements:	**Recommended previous knowledge:**
none	none
Language:	**Person responsible for module:**
German	Prof. Dr. Christian Ammer
Course frequency:	**Duration:**
each winter semester	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**

Maximum number of students:	
not limited	

Georg-August-Universität Göttingen	6 C
Module B.Forst.1114: Forest genetics	4 WLH

Learning outcome, core skills:	Workload:
Grundkenntnisse in klassischer und molekularer Genetik. Kenntnisse in moderner forstgenetischer Forschung auf der Basis genetischer Marker. Verständnis der Bedeutung genetischer Information für das Wachstum von Bäumen sowie der zeitlichen und räumlichen Dynamik genetischer Strukturen von Waldbaumpopulationen. Grundkenntnisse über die Erhaltung und Nutzung forstgenetischer Ressourcen.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Forstgenetik (Lecture, Exercise)	4 WLH
Examination: Written examination (120 minutes)	6 C

Examination requirements:
Nachweis von Kenntnissen in klassischer und molekularer Genetik, Populationsgenetik, Evolution sowie in Anwendungen genetischer Forschung in den Forstwissenschaften.

Admission requirements:	Recommended previous knowledge:
none	none
Language: German	**Person responsible for module:** Prof. Dr. Oliver Gailing
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:** 3
Maximum number of students: not limited	

Georg-August-Universität Göttingen	3 C
Module B.Forst.1115: Silviculture practice	4 WLH

Learning outcome, core skills:	Workload:
Die Studierenden sollen in die Lage versetzt werden, Boden, Vegetation und Bestand im Gelände umfassend anzusprechen und im Hinblick auf die Entwicklung waldbaulicher Handlungsalterativen zu bewerten. Sie sollen darüber hinaus die Fähigkeit erwerben selbstständig praxisnahe Empfehlungen zur Behandlung von Waldbeständen zu entwickeln.	Attendance time: 56 h Self-study time: 34 h

Course: Waldbau - Übungen (Exercise)	4 WLH
Examination: Written examination (120 minutes)	3 C

Examination requirements:
Fähigkeit im Gelände die Standortsverhältnisse im Hinblick auf die Baumartenwahl einschätzen zu können, sowie auf der Grundlage einer ausführlichen Bestandesbeschreibung geeignete waldbauliche Maßnahmen für einen konkreten Waldbestand abzuleiten.

Admission requirements:	Recommended previous knowledge:
none	none
Language:	**Person responsible for module:**
German	Prof. Dr. Christian Ammer
Course frequency:	**Duration:**
each summer semester	1 semester[s]

cf. examination regulations	4
Maximum number of students:	
not limited	

Georg-August-Universität Göttingen **Module B.Forst.1117: Forest business administration**	6 C 5 WLH

Learning outcome, core skills: Neben der Vermittlung des erforderlichen fachbezogenen Basiswissens (Grundlagen der forstlichen Kosten u. Leistungsrechnung, Betriebsstatistik, Planungs- u. Investitionsrechnung) sollen die Studierenden mit den Instrumenten der entscheidungsorientierten forstlichen Betriebswirtschaftslehre vertraut gemacht werden; das betrifft insbesondere die Methoden der Waldbewertung und Entscheidungsfindung zu verschiedenen forstbetrieblichen Funktionsbereichen (wie Beschaffung, Produktion, Absatz, Finanzierung, forstlicher Steuerlehre) . Dabei soll durch praktische Übungen die Fähigkeiten zum problembezogenen Denken und zur eigenständigen Problemlösung gestärkt werden.	**Workload:** Attendance time: 70 h Self-study time: 110 h

Course: Forstliche Betriebswirtschaftslehre (Lecture, Exercise)	5 WLH
Examination: Written examination (90 minutes)	6 C

Examination requirements: Die Studierenden weisen in der Modulprüfung nach, dass sie • das fachbezogene Basiswissen der Vorlesung vollständig wiedergeben können, • die kennengelernten Ansätze auf vergleichbare Problemstellungen übertragen und diese lösen können, • Konzepte und Instrumente der entscheidungsorientierten forstlichen Betriebswirtschaftslehre erklären und anwenden können, • die eigenen Lösungen kritisch reflektieren und Altennativen aufzeigen können.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: German	**Person responsible for module:** Prof. Dr. Bernhard Möhring
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:** 4
Maximum number of students: not limited	

| Georg-August-Universität Göttingen | 6 C |
| Module B.Forst.1118: Forest monitoring I | 5 WLH |

Learning outcome, core skills:	**Workload:**
Die Studierenden sollen die Themenbereiche „Waldmesslehre", „Waldinventur", „Vermessungslehre" und „Fernerkundung" in ihrer Bedeutung für die Daten- und Informationsbeschaffung praktisch aller anderen forstlichen Disziplinen kennen und einordnen können. Sie sollen die grundlegenden Techniken und Methoden beherrschen, um deren Einsatz in konkreten Projekten der Forschung und der Anwendung optimieren zu können. Die Übungen vermitteln Erfahrungen und Fähigkeiten im Umgang mit Messgeräten für grundlegende Anwendungen in der Waldinventur und der Vermessung.	Attendance time: 70 h Self-study time: 110 h
Die Studierenden sollen die wissenschaftlichen Grundlagen der Waldinventur beherrschen lernen (Prinzipien und Techniken der Erfassung von Einzelbaum- und Wald-bezogenen Attributen), um forstliche, waldökologische oder landschaftsökologische Projekte in Forschung und Anwendung hinsichtlich Datenerfassung und –auswertung effizient planen, durchführen und berichten zu können. Grundlage hierfür ist auch das Beherrschen von Messgeräten und Auswertungsalgorithmen.	
Zu den Lernzielen gehört die Fähigkeit zur eigenständigen effizienten Planung, Durchführung, Auswertung und Analyse von Datenerfassungen in Forstwirtschaft, Forstwissenschaft und Ökologie. Dazu gehören auch die Lösung grundlegender Vermessungsaufgaben, der Einsatz von GNSS Empfängern und digitaler Kartographie, sowie der Einsatz von Fernerkundungsmethoden.	

Course: Waldinventur (Lecture, Exercise)	5 WLH
Examination: Klausur (90 Minuten, Gewichtung: 75%) und praktische Prüfung (ca. 30 Minuten, Gewichtung: 25%)	6 C

Examination requirements:	
Die Studierenden sollen nachweisen, dass sie Kenntnisse und Fertigkeiten bezüglich grundlegender Methoden der Messung und Schätzung von Attributen von Bäumen und Waldbeständen besitzen.	
Die Studierenden sollen Kenntnisse der wissenschaftlichen Grundlagen der Waldinventurmethoden nachweisen und auch grundlegende Aufgaben zu Planung, Implementation und Auswertung von Waldinventurdaten lösen können.	
Im praktischen Teil der Prüfung soll die Sicherheit im korrekten Umgang mit relevanten Messgeräten nachgewiesen werden.	
Die Gewichtung der Einzelprüfungsergebnisse zur Ermittlung der Gesamtnote erfolgt nach erreichter Anzahl Punkte.	

Admission requirements:	**Recommended previous knowledge:**
none	Grundlagen der beschreibenden Statistik, Geometrie und Trigonometrie aus der Schulmathematik
Language:	**Person responsible for module:**

German	Prof. Dr. Christoph Kleinn
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:** 4
Maximum number of students: not limited	

Georg-August-Universität Göttingen **Module B.Forst.1122: Tree growth and forest management planning**	6 C 4 WLH

Learning outcome, core skills: Erwerb von Grundkenntnissen über die Wachstumsprozesse von Einzelbäumen und Beständen in ihrer Abhängigkeit von Zeit, Standortbedingungen, waldbaulichen Maßnahmen und biotischen oder abiotischen Störfaktoren. Aufbau und Anwendung von Waldwachstumsmodellen als Entscheidungshilfe für den Forstbetrieb und die Forstplanung. Vermittlung von Grundkenntnissen und Methoden der Forstplanung (Forsteinrichtung). Die Waldzustandserfassung und -beschreibung, die Zuwachsprognose mithilfe von Wuchsmodellen und die Planung der nachhaltigen Waldentwicklung bilden thematische Schwerpunkte. Teilnehmer/-innen dieser Veranstaltung lernen, alternative forstliche Nutzungs- und Pflegemaßnahmen auf der Grundlage der rechtlichen Vorgaben, der betrieblichen Ziele, der standörtlichen Voraussetzungen sowie der waldwachstumskundlichen Gesetzmäßigkeiten zu beurteilen und zu planen. Die Veranstaltung fördert selbständiges Denken, das Verständnis für Zusammenhänge und die Fähigkeit zur Planung und Berwertung nachhaltiger forstlicher Nutzungskonzepte.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Einführung in die Waldwachstumskunde (Lecture, Excursion, Exercise)	2 WLH
Course: Einfürhung in die Forsteinrichtung (Lecture, Excursion, Exercise)	2 WLH
Examination: Written examination (120 minutes)	6 C

Examination requirements: Grundkenntnisse zu Wachstumsprozessen von Einzelbäumen und Beständen und zu Aufbau und Anwendung von Waldwachstumsmodellen. Grundkenntnisse in den Methoden der Forstplanung. Hierzu zählen die Waldzustandserfassung und -beschreibung, die Anwendung von Wuchsmodellen zu Prognose- und Simulationszwecken und die Analyse und Planung forstlicher Nutzungs- und Pflegemaßnahmen.	

Admission requirements: none	**Recommended previous knowledge:** Waldinventur, Waldbau, Standortskunde
Language: German	**Person responsible for module:** Prof. Dr. Carola Paul

Georg-August-Universität Göttingen **Module B.Inf.1213: Quantum computing**	5 C 3 WLH

Learning outcome, core skills:	Workload:
Es werden die Grundlage des Quantencomputings gelegt, so dass die Teilnehmerinnen und Teilnehmer im Anschluss dessen grundlegende Prinzipien im Vergleich zum klassischen Rechnen verstanden haben. Dies geschieht vermöge der Vermittlung grundlegender Algorithmen, wie Deutschs Algorithmus, Grovers Algorithmus, der Quanten-Fouriertransformation und Shors Algorithmus. Das geht nicht ohne ein Verständnis von Quantenregistern und Quantenschaltkreisen.	Attendance time: 42 h Self-study time: 108 h

Course: **Quantencomputing** (Lecture, Exercise)	3 WLH
Examination: Oral examinationMündliche Prüfung oder mündliche online Prüfung (ca. 20 min) (approx. 20 minutes) **Examination requirements:** Quantenregister; Quantenschaltkreise; Deutschs Algorithmus; Grovers Algorithmus; Quanten-Fouriertransformation; Shors Algorithmus; Vergleich Quantencomputing und klassisches Rechnen.	5 C

Admission requirements: Grundlagen der Analysis, der Lineare Algebra und der Theoretischen Informatik	Recommended previous knowledge: none
Language: German	Person responsible for module: Prof. Dr. Stephan Waack
Course frequency: unregelmäßig	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: 3 - 6
Maximum number of students: 50	

Georg-August-Universität Göttingen **Module B.Inf.1231: Infrastructures of Data Science**	6 C 4 WLH

| **Learning outcome, core skills:**
Upon completion the course, students

• understand the basic functions of data science infrastructures and their significance.
• understand basic data types and their specifics.
• understand the most important technical infrastructures for storing and processing data locally and in the cloud as well as their advantages and disadvantages in relation to data science applications.
• can apply the concept of the data lake to basic data science problems.
• are able to apply the different steps of data pre-processing to selected data sets.
• can identify the characteristics of time series and graph data and are able to recall the functions of DBMSs designed for their processing.
• can present the basic tasks of data analysis platforms and can describe them using examples.
• can apply methods and tools for the presentation and visualisation of data.
• can model basic data science workflows and are able to transfer their knowledge to basic data science projects. | **Workload:**
Attendance time:
56 h
Self-study time:
124 h |

Course: Infrastructures of Data Science (Lecture, Exercise) *Contents*: • Data types and their characteristics • Common functions of data science infrastructures • Storage, compute, and cloud infrastructures for data science • Concept of a data lake • Data pre-processing methods and selected tools • Time series and graph data, the respective DBMS, and query languages • Data analytics platforms • Data presentation and visualization • Data science workflows and selected infrastructure components	4 WLH
Examination: In-class, written exam (90 min) or oral exam (approx. 30 min.) **Examination prerequisites:** Students complete 50% of the homework exercises. **Examination requirements:** Through the examination students demonstrate that they are able to describe basic functions of (cloud-based) data science infrastructures as well as to specify and identify basic data types. Students can also prove their understanding of data lakes and can apply their knowledge of MapReduce and Hadoop in that particular context. They can analyse basic data pre-processing problems and sketch common solutions. Student can show that they understand time series and graph data as well as the corresponding DBMS and that they can present common tasks of data analysis platforms. Through the examination, students also demonstrate their ability to select appropriate methods for visualising data and show that they are able to create basic data science workflows.	6 C

Admission requirements:	Recommended previous knowledge:
none	Python and basic database knowledge (recommended, not mandatory)
Language:	Person responsible for module:
English	Hon.-Prof. Dr. Philipp Wieder

Maximum number of students:	
50	

Georg-August-Universität Göttingen **Module B.Inf.1236: Machine Learning**	6 C 4 WLH

Learning outcome, core skills: Students • learn concepts and techniques of machine learning and understand their advantages and disadvantages compared with alternative approaches • learn techniques of supervised learning for classification and regression • learn techniques of unsupervised learning for density estimation, dimensionality reduction and clustering • implement machine learning algorithms like linear regression, logistic regression, kernel methods, tree-based methods, neural networks, principal component analysis, k-means and Gaussian mixture models • solve practical data science problems using machine learning methods	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Machine Learning (Lecture) Bishop: Pattern recognition and machine learning. https://cs.ugoe.de/prml	2 WLH
Examination: Written examination (90 minutes) **Examination prerequisites:** B.Inf.1236.Ex: At least 50% of homework exercises solved and N-1 attempts presented to tutors **Examination requirements:** Knowledge of the working principles, advantages and disadvantages of the machine learning methods covered in the lecture	6 C

Course: Machine Learning - Exercise (Exercise) *Contents*: Students present their solutions of the homework exercises to tutors and discuss them with their tutors.	2 WLH

Admission requirements: none	**Recommended previous knowledge:** Knowledge of basic linear algebra and probability English language proficiency at level B2 (CEFR)
Language: English	**Person responsible for module:** Prof. Dr. Alexander Ecker
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 4
Maximum number of students: 100	

Georg-August-Universität Göttingen **Module B.Inf.1237: Deep Learning**	6 C 4 WLH

Learning outcome, core skills: Students • learn concepts and techniques of deep learning and understand their advantages and disadvantages compared to alternative approaches • learn to solve practical data science problems using deep learning • implement deep learning techniques like multi-layer perceptrons, convolutional neural networks and other modern deep learning architectures • learn techniques for optimization and regularization of deep neural networks • learn applications of deep neural networks for computer vision tasks such as segmentation and object detection	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Deep Learning for Computer Vision (Lecture) Goodfellow, Bengio, Courville: Deep Learning. https://www.deeplearningbook.org Bishop: Pattern Recognition and Machine Learning. https://cs.ugoe.de/prml	2 WLH
Examination: Written examination (90 minutes) **Examination prerequisites:** B.Inf.1237.Ex: At least 50% of homework exercises solved and N-1 attempts presented to tutors **Examination requirements:** Knowledge of basic deep learning techniques, their advantages and disadvantages and approaches to optimization and regularization. Ability to implement these techniques.	6 C

Course: Deep Learning for Computer Vision - Exercise (Exercise) *Contents*: Students present their solutions of the homework exercises to tutors and discuss them with their tutors.	2 WLH

Admission requirements: none	**Recommended previous knowledge:** Basic knowledge of linear algebra and probability Completion of B.Inf.1236 Machine Learning or equivalent
Language: English	**Person responsible for module:** Prof. Dr. Constantin Pape Prof. Dr. Alexander Ecker
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 5
Maximum number of students: 100	

Georg-August-Universität Göttingen **Module B.Inf.1240: Visualization**	5 C 3 WLH

Learning outcome, core skills: Knowledge of - the potentials and limitations of data visualization - the fundamentals of visual perception and cognition and their implications for data visualization. Students can apply these to the design of visualizations and detect manipulative design choices - a broad variety of techniques for visual representation of data, including abstract and high-dimensional data. Students can select appropriate methods on new problems - integration of visualization into the data analysis process, algorithmic generation and interactive methods	**Workload:** Attendance time: 42 h Self-study time: 108 h

Course: Visualization (Lecture, Exercise)	3 WLH
Examination: Practical project (2-3 weeks) with presentation and questions during oral exam in groups (approx. 20 minutes per examinee). **Examination prerequisites:** At least 50% of homework exercises solved. **Examination requirements:** Knowledge of potentials and limitations of data visualization, fundamentals of visual perception and their implications for good design choices, techniques for visual representation and how to use them.	5 C

Admission requirements: none	**Recommended previous knowledge:** Foundations of linear algebra and analysis (e.g. B.Mat.0801 and B.Mat.0802) and programming skills (e.g. B.Inf.1842).
Language: English	**Person responsible for module:** Prof. Dr. Bernhard Schmitzer
Course frequency: once a year	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 3 - 6
Maximum number of students: 50	

Georg-August-Universität Göttingen **Module B.Inf.1241: Computational Optimal Transport**	6 C 4 WLH

Learning outcome, core skills: Knowledge of - the fundamental notions of optimal transport, and its strengths and limitations as a data analysis tool - the discrete Kantorovich formulation, its convex duality, and Wasserstein distances - classical numerical algorithms, entropic regularization, and their scopes of applicability - examples for data analysis applications. Students can transfer these to new potential applications	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Computational Optimal Transport (Lecture, Exercise)	4 WLH
Examination: Written exam (90 minutes) or oral exam (approx. 20 minutes) **Examination prerequisites:** At least 50% of homework exercises solved. **Examination requirements:** Knowledge of Kantorovich duality, Wasserstein distances, standard algorithms and implications for data analysis applications.	6 C

Admission requirements: none	**Recommended previous knowledge:** Foundations of linear algebra and analysis (e.g. B.Mat.0801 and B.Mat.0802) and programming skills (e.g. B.Inf.1842).
Language: English	**Person responsible for module:** Prof. Dr. Bernhard Schmitzer
Course frequency: once a year	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 4 - 6
Maximum number of students: 50	

Georg-August-Universität Göttingen **Module B.Inf.1243: Algorithms for Data Science**	5 C 4 WLH

Learning outcome, core skills:	**Workload:**
After the successful completion of the module, the students should have a good understanding of fundamental algorithmic-approaches and -tools used in the area of data science. This lecture will approach topics related to: processing of fundamental data types and structures, such as numeric and textual data, graphs, spatial data, etc.; measuring the similarity of data; clustering; pattern matching, recognition, and mining; etc. The lecture will start from a relatively low level (and cover also basic algorithms for graphs, strings, etc.). The lecture will be loosely based on the two following two textbooks. Avrim Blum, John Hopcroft, and Ravi Kannan. Foundations of Data Science, 2018. URL:https://www.cs.cornell.edu/jeh/book.pdf. Charu C. Aggarwal. Data Mining: The Textbook, Springer, May 2015	Attendance time: 56 h Self-study time: 94 h

Course: Algorithms for Data Science (Exercise)	2 WLH

Course: Algorithms for Data Science (Lecture)	2 WLH
Examination: Oral Exam (approx. 30 min.) or Written Exam (120 min.)	5 C

Examination requirements: Oral presentation of a theoretical subject from the lecture and a sketch solution to an algorithmic problem related to the covered topics.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Florin Manea
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: three times	**Recommended semester:** Bachelor: 5 - 6; Master: 1 - 4
Maximum number of students: 50	

Georg-August-Universität Göttingen **Module B.Inf.1244: Data Management for Data Science**	5 C 4 WLH

Learning outcome, core skills: The module provides the fundamental conceptual, systemic and application-related aspects of the sustainable utilization of data from its creation and publication to its sustainable storage. Organized handling of data includes the processes of archiving and re-using data. This covers the strategic planning of research projects (research data management), the management of the technical foundations and the recording, organization, and linking of metadata. The participants will learn approaches to handle big data, including all facets of heterogenous or fast streaming data. We will also work on the concepts of (web) APIs in order to empower the participants to collect and combine their own data sets. The latter requires an understanding of standard processes such as Extract-Transform-Load (ETL). Data integration and interoperability of different data sources is the central challenge. The learned concepts will be tested and applied using advanced solutions. We will investigate the current market of data management tools, warehouse solutions or data processing platforms. The students develop the ability to think in systems and processes. The students are able to transfer their acquired knowledge and skills for problem solving to new areas of responsibility, to work together in groups and to work on new issues together.	**Workload:** Attendance time: 56 h Self-study time: 94 h

Course: Data Management for Data Science (Lecture, Exercise)
Contents:
 	
  • Data management processes in the context of the data life cycle
  • Tools for data management
  • Provision of data for data science processes
  • Data quality and data security
  • Data handling in the context of IoT
  • ETL/ELT processes
  • Stream & batch processing
  • Read-only-data structures
  • Data Lakes vs Data Warehouse
  • Event-driven data architectures
 	
Course frequency: each winter semester
	4 WLH

Examination: Written examination (120 minutes)
Examination requirements:
 	
  • Describing the data lifecycle
  • Understanding different approaches for data archiving
  • Explaining the structure, functionality and use of practice-relevant data management, storage and archiving systems
  • Understanding the ETL/ELT processes for data handling
  • Describing the concepts of data warehousing and data lakes
  • Describing the concepts and challenges for Big Data and data at scale
	5 C

• Understanding the read only data store architecture

Admission requirements:	Recommended previous knowledge:
none	none
Language:	**Person responsible for module:**
English	Dr. Sven Bingert

Georg-August-Universität Göttingen **Module B.Inf.1246: Software Engineering for Data Science**	5 C 3 WLH

| **Learning outcome, core skills:**
 The students acquire the following competences in the areas of software engineering and engineering AI-enabled systems:

 Part I: Software Engineering:

 The studens

 • know definition and tasks of software engineering
 • know what a software project is and which persons and roles are involved in software projects.
 • know and can assess different software engineering process models. The assessment is based on purposes as well as advantages and disadvantages of the models.
 • know the principles of the development phases requirements engineering, design, implementation and quality assurance.
 • can assess and apply basic techniques for requirements engineering, design and quality assurance.

 Part II: Engineering AI-Enabled Systems

 The students

 • know principles and can assess methods of engineering processes for AI-enabled systems.
 • know, assess and can apply engineering methods for engineering AI-enabled systems. Engineering methods may cover requirements engineering, design, architecture and operations.
 • know and can assess the principles of responsible AI engineering. This includes knowledge about the aspects provenance, versioning, reproducibility, safety, security and privacy, fairness, interpretability and explainability, as well as transparency and trust. | **Workload:**
 Attendance time:
 42 h
 Self-study time:
 108 h |

| **Course: Software Engineering for Data Science** (Lecture, Exercise)
 Contents:
 The lecture will cover topics from the following materials:

 • Ian Sommerville. 2015. Software Engineering, Global Edition. Pearson Education.
 • Christian Kästner, Eunsuk Kang. 2020. Teaching software engineering for AI-enabled systems. CSE-SEET '20: Proceedings of the ACM/IEEE 42nd International Conference on Software Engineering: Software Engineering Education and Training.
 • Geoff Hulten. 2019. Building Intelligent Systems: A Guide to Machine Learning, Engineering. Apress.
 • Jeff Smith. 2018. Machine Learning Systems: Designs that Scale. Manning Publications Co. | 3 WLH |
| **Examination: Written Exam (90 min.) or Oral Exam (approx. 20 min.)** | 5 C |

Examination prerequisites:	
Develop and present the solution of one exercise (presentation and report).	

Examination requirements:	
Software engineering definition, software projects, software processes, requirements engineering, design, implementation, quality assurance, engineering processes for AI-enabled systems, responsible AI engineering.

Georg-August-Universität Göttingen **Module B.Inf.1701: Advanced Theoretical Computer Science**	5 C 3 WLH

Learning outcome, core skills: Dieses Modul baut die Kompetenzen aus dem Modul B.Inf.1201 aus. Es geht um den Erwerb fortgeschrittener Kompetenz im Umgang mit theoretischen Konzepten der Informatik und den damit verbundenen mathematischen Techniken und Modellierungstechniken.	**Workload:** Attendance time: 42 h Self-study time: 108 h

Course: Vorlesungen zur Codierungstheorie, Informationstheorie oder Komplexitätstheorie (Lecture, Exercise) *Contents*: Vertiefung in einem der folgenden Gebiete: Komplexitätstheorie (Erkundung der Grenzen effizienter Algorithmen), Datenstrukturen für boolesche Funktionen, Kryptographie, Informationstheorie, Codierungstheorie, Signalverarbeitung.	
Examination: Klausur (90 Minuten) oder mündliche Prüfung (ca. 20 Min.)	5 C

Examination requirements: Nachweis über den Erwerb vertiefter weiterführender Kompetenzen aus dem Kompetenzbereich der Module *B.Inf.1201 Theoretische Informatik* oder *B.Inf.1202 Formale Systeme*.	

Admission requirements: none	**Recommended previous knowledge:** B.Inf.1201, B.Inf.1202
Language: German, English	**Person responsible for module:** Prof. Dr. Stephan Waack (Prof. Dr. Carsten Damm)
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 30	

| Georg-August-Universität Göttingen | 5 C |
| Module B.Inf.1704: Advanced Computer Engineering | 3 WLH |

Learning outcome, core skills:	Workload:
Die Studierenden haben vertiefte Kenntnisse und Kompetenzen auf einem Gebiet der technischen Informatik erworben, z.B. auf dem Gebiet Sensorik und Aktorik.	Attendance time: 42 h Self-study time: 108 h

Course: Sensorik und Aktorik (Lecture, Exercise)	
Contents: Die Studierenden - kennen die Grundlagen der Mess- und Regelungstechnik für die Sensorik und Aktorik - können die Begriffe Sensor und Aktor definieren - kennen Verfahren, Prinzipien und Methoden für die Messung mit Sensoren und Steuerung mit Aktoren - kennen Eigenschaften realer Sensoren und Aktoren - kennen Sensor- und Aktor-Systeme - kennen speicherprogrammierbare Steuerung (programmable logic controller, PLC) - kennen ein Feldbus (fieldbus) und ein Industrial-Ethernet-System, sowie die zugehörigen Protokolle - können Informations- und Echtzeitsysteme unterscheiden *Course frequency:* once a year	
Examination: Written examination (90 minutes) **Examination requirements:** Grundlagen der Mess- und Regelungstechnik; Definition von Sensor und Aktor; Mess-/ Steuerungsverfahren; Mess-/Steuerungsprinzipien; Mess-/Steuerungsmethoden; Eigenschaften realer Sensoren und Aktoren; Sensor- und Aktorik-Systeme; speicherprogrammierbare Steuerung; Feldbus; Industrial-Ethernet; Informationssystem; Echtzeitsysteme	5 C

Admission requirements: none	Recommended previous knowledge: B.Inf.1212
Language: German, English	**Person responsible for module:** Dr. Henrik Brosenne
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 30	

Georg-August-Universität Göttingen	5 C
Module B.Inf.1705: Advanced Software Engineering	3 WLH

Learning outcome, core skills:	**Workload:**
Die Studierenden haben vertiefte Kenntnisse und Kompetenzen aus einem Gebiet der Softwaretechnik erworben. Beispiele für Gebiete der Softwaretechnik in denen vertiefte Kenntnisse und Kompetenzen erworben werden können sind Requirements Engineering, Qualitätssicherung oder Softwareevolution.	Attendance time: 42 h Self-study time: 108 h

Course: Software Testing (Lecture, Exercise)	3 WLH
Contents: The students - can define the term software quality and acquire knowledge on the principles of software quality assurance. - become acquainted with the general test process and know how the general test process can be embedded into the overall software development process. - gain knowledge about manual static analysis and about methods for applying manual static analysis. - gain knowledge about computer-based static analysis and about methods for applying computer-based static analysis. - gain knowlege about black-box testing and about the most important methods for deriving test cases for black-box testing. - gain knowlege about glass-box testing and about the most important methods for deriving test cases for glass-box testing. - acquire knowledge about the specialities of testing of object oriented software. - acquire knowledge about tools that support software testing. - gain knowledge about the principles of test managment.	
Examination: Klausur (90 Minuten) oder mündliche Prüfung (ca. 20 Min.) **Examination prerequisites:** Develop and present the solution of at least one exercise (presentation and report) and active participation in the exercises. **Examination requirements:** Software quality, principles of software quality assurance, general test process, static analysis, dynamic analysis, black-box testing, glass-box testing, testing of object-oriented systems, testing tools, test management	5 C

Admission requirements:	**Recommended previous knowledge:**
none	B.Inf.1101, B.Inf.1209
Language: English	**Person responsible for module:** Prof. Dr. Jens Grabowski

Maximum number of students: 30	

Georg-August-Universität Göttingen **Module B.Inf.1709: Advanced Algorithms and Data Structures**	5 C 4 WLH

Learning outcome, core skills: Die Studierenden haben vertiefte Kenntnisse und Kompetenzen auf einem Gebiet aus dem Bereich Algorithmen und Datenstrukturen erworben. Beispiele für solche Gebiete sind Algorithms on Sequences und Advanced Topics on Algorithms.	**Workload:** Attendance time: 56 h Self-study time: 94 h

Course: Algorithms on Sequences (Lecture, Exercise) *Contents*: This course is an introduction into the theory of stringology, or algorithms on sequences of symbols (also called words or strings). Our main intention is to present a series of basic algorithmic and combinatorial results, which can be used to develop efficient word-processing tools. While the emphasis of the course is on the theoretical side of stringology, we also present a series of applications of the presented concepts in areas like data-compression or computational biology. We expect that the participants to this course will gain an understanding of classical string-processing tools. They are supposed to understand and be able to use in various situations: classical text algorithms (e.g., pattern matching algorithms, edit distance), classical text indexing data structures (e.g., suffix arrays / trees), and classical combinatorial results that are useful in this context (e.g., periodicity lemmas). The main topics our course will cover are: basic combinatorics on words, pattern matching algorithms, data structures for text indexing (suffix arrays, suffix trees), text compression (Huffman encoding, Lempel-Ziv method), detection of regularities in words, algorithms for words with don't care symbols (partial words), word distance algorithms, longest common subsequence algorithms, approximate pattern matching. The presentation of each theoretical topic from the above will be accompanied by a brief discussion on its possible applications. Literature - T.H. Cormen, C.E. Leiserson, R.L. Rivest, C. Stein: Introduction to Algorithms (3rd Edition), MIT Press, 2009. - M. Crochemore, C. Hancart, T. Lecroq: Algorithms on Strings, Cambridge University Press, 2007. - M. Crochemore, W. Rytter: Jewels of Stringology, World Scientific, 2002. - D. Gusfield. Algorithms on strings, trees, and sequences: computer science and computational biology. Cambridge University Press, 1997. *Course frequency:* irregular	4 WLH
Course: Advanced Topics on Algorithms (Lecture, Exercise) *Contents*: In this course we present a series of selected results on data structures and efficient algorithms, and discuss a series of areas in which they can be applied successfully. The emphasis of the course is on the theory, we also approach the problem of a practical implementation of the presented algorithms.	4 WLH

We expect that the students that will participate in this lecture will become familiar with efficient sorting and searching methods, advanced data structures, dynamic data structures, as well as other efficient algorithmic methods, they will be able to estimate the complexity of those algorithms, and they will be able to apply those algorithms to particular programming problems (from practical or theoretical settings).

The main topics our course will cover are: efficient sorting and searching (non-comparison based methods, van Emde Boas trees, Radix Sort), advanced tree-structures (Fibonacci heaps, B-Trees, structures for working with disjoint sets), dynamic data structures (range minimum queries, lowest common ancestor, applications to string algorithms: suffix arrays, suffix trees), Hashing and Dictionaries, Young tableaux, geometric algorithms (convex hull), number theoretic algorithms. The presentation of each theoretical topic from the above will be accompanied by a brief discussion on its possible applications.

Learning outcome, core skills: Die Studierenden haben vertiefte Kenntnisse und Kompetenzen auf einem Gebiet aus dem Bereich Sensordatenverarbeitung erworben. Beispiele für solche Gebiete sind "Sensor Data Fusion" und "Mobile Robotics".	**Workload:** Attendance time: 56 h Self-study time: 94 h

Course: Sensor Data Fusion (Lecture, Exercise) *Contents*: This lecture is concerned with fundamental principles and algorithms for the processing and fusion of noisy (sensor) data. Applications in the context of navigation, object tracking, sensor networks, robotics, Internet-of-Things, and data science are discussed. After completion, students are able to • define the notion of data fusion and distinguish different data fusion levels • formalize data fusion problems as state estimation problems • develop distributed and decentralized data fusion architectures • describe the basic concepts of linear estimation theory • explain the fundamental formulas for the fusion of noisy data • deal with unknown correlations in data fusion • understand the Bayesian approach to data fusion and estimation • formulate dynamic models for time-varying phenomena • describe the concept of a recursive Bayesian state estimator • explain and apply the Kalman filter for state estimation in dynamic systems • explain and apply basic nonlinear estimation techniques such as the Extended Kalman filter (EKF) and Unscented Kalman filter (UKF) • assess the properties, advantages, and disadvantages of the discussed (nonlinear) estimators • explain different approaches to deal with uncertainty such as probability theory, fuzzy theory, and Dempster–Shafer theory • identify data fusion applications and assess the benefits of data fusion *Course frequency:* irregular	4 WLH
Course: Mobile Robotics (Lecture, Exercise) *Contents*: This lecture is concerned with fundamental principles and algorithms for mobile robot navigation and perception. After completion, the students are able to • model the locomotion of wheeled mobile robots • understand the concept of dead reckoning • describe the most common sensors for mobile robots, e.g., inertial sensors and beam-based sensors • employ probabilistic state estimation methods such as Kalman filters and sequential Monte Carlo methods (particle filters) for robot navigation and perception	4 WLH

- describe and distinguish different concepts for localization such as trilateration and triangulation
- implement and evaluate basic algorithms for localization
- understand the robot mapping problem and explain different map representations such as occupancy grids
- describe the problem of Simultaneous Localization and Mapping (SLAM)
- implement and evaluate basic algorithms for SLAM such as graph-based approaches and Rao-Blackwellized particle filters
- implement and evaluate basic feature extraction methods such as Random Sample Consensus (RANSAC)
- design basic planning algorithms for mobile robots using, e.g., a Markov Decision Process (MDP)

Course frequency: irregular

Examination: Klausur (90 Min.) oder mündliche Prüfung (ca. 20 Min.) **Examination requirements:** Sensor Data Fusion - Definition of data fusion; data fusion levels; formalization of data fusion problems; distributed and decentralized fusion architectures; linear estimation theory; fundamental fusion formulas; dynamic state estimation; Kalman filter; Extended Kalman filter (EKF); Unscented Kalman filter (UKF), algorithms for dealing with unknown correlations; fuzzy theory; Dempster-Shafer theory Mobile Robotics - Motion models for wheeled robots; dead reckoning; mobile robot sensors; Kalman filter; particle filter; localization concepts and algorithms; robot mapping; Simultaneous Localization and Mapping (SLAM); feature extraction methods; planning algorithms	5 C

Module B.Inf.1802: Training in Programming	4 WLH

Learning outcome, core skills:	Workload:
Die Studierenden erlernen eine objektorientierte Programmiersprache, sie	**Attendance time:** 56 h
• kennen die gängigen Programmierwerkzeuge (Compiler, Build-Management-Tools) und können diese benutzen.	**Self-study time:** 94 h
• kennen die Grundsätze und Techniken des objektorientierten Programmentwurfs (z.B. Klassen, Objekte, Kapselung, Vererbung, Polymorphismus) und können diese anwenden.	
• kennen eine Auswahl der zur Verfügung stehenden Application Programming Interfaces (APIs) (z.B. Collections-, Grafik-, Thread-API)	
• können Dokumentationskommentare benutzen und kennen die Werkzeuge zur Generierung von API-Dokumentation.	
• kennen Techniken und Werkzeuge zur Versionskontrolle und können diese anwenden.	
• können Programme erstellen, die konkrete Anforderungen erfüllen, und deren Korrektheit durch geeignete Testläufe überprüfen.	
• kennen die Prinzipien und Methoden der projektbasierten Teamarbeit und können diese umsetzen.	

Course: **Programmierpraktikum** (Internship, Lecture)	

Examination: Projektarbeit (4-6 Wochen) und mündliche Prüfung (ca. 20 Minuten je zu prüfender Person) als Gruppenprüfung	5 C
Examination prerequisites: B.Inf.1802.Ue: Lösung von 50% der Programmieraufgaben. **Examination requirements:** Klassen, Objekte, Schnittstellen, Vererbung, Packete, Exceptions, Collections, Typisierung, Grafik, Threads, Thread-Synchronisation, Prozess-Kommunikation, Dokumentation, Archive, Versionskontrolle	

Admission requirements: B.Inf.1101	**Recommended previous knowledge:** B.Inf.1801

Module B.Mat.0720: Mathematical application software	2 WLH

Learning outcome, core skills:	**Workload:**
Lernziele:	Attendance time:
Nach erfolgreichem Absolvieren des Moduls haben die Studierenden	28 h
• die Grundprinzipien der Programmierung erfasst;	Self-study time:
• die Befähigung zum sicheren Umgang mit einer Programmiersprache im mathematische Kontext erworben;	62 h
• Erfahrungen mit elementaren Algorithmen und deren Anwendungen gesammelt.	
Kompetenzen:	
Nach erfolgreichem Absolvieren des Moduls haben die Studierenden grundlegende Kenntnisse über eine Programmiersprache im mathematischen Kontext erworben. Sie	
• haben die Fähigkeit erworben, Algorithmen in einer Programmiersprache umzusetzen;	
• haben gelernt die Programmiersprache zum Lösen von Algebraischen Problemen zu nutzen (Computeralgebra CAS).	

Course: Blockkurs	2 WLH
Contents:	
Blockkurs bestehend aus Vorlesung, Übungen und Praktikum, z.B. "Einführung in Python und Computeralgebra".	

Examination: Written examination (90 minutes)	3 C

Examination requirements:	
Grundkenntnisse in einer Programmiersprache mit Fokus auf mathematisch orientierte Anwendung und Hintergrund.	

Admission requirements:	**Recommended previous knowledge:**
none	B.Mat.0011, B.Mat.0012
Language:	**Person responsible for module:**

Additional notes and regulations:

- Dozent/in: Lehrpersonen des Instituts für Numerische und Angewandte Mathematik.
- Ausschluss: Studierende, die das Modul B.Mat.0721 bereits erfolgreich absolviert haben, dürfen das Modul B.Mat.0720 nicht absolvieren.

Georg-August-Universität Göttingen	9 C
Module B.Mat.2100: Partial differential equations	6 WLH

Learning outcome, core skills:	**Workload:**
Lernziele:	Attendance time:
Nach erfolgreichem Absolvieren des Moduls sind die Studierenden mit grundlegenden Typen von Differenzialgleichungen und Eigenschaften ihrer Lösungen vertraut. Sie	84 h Self-study time: 186 h
• beschreiben grundlegende Eigenschaften von Lösungen der Laplace-, Wärmeleitungs- und Wellengleichung und zugehöriger Rand- bzw. Anfangs-Randwertprobleme;	
• sind mit grundlegenden Eigenschaften von Fourier-Transformation und Sobolev-Räumen auf beschränkten und unbeschränkten Gebieten vertraut;	
• analysieren die Lösbarkeit von Randwertproblemen für elliptische Differenzialgleichungen mit variablen Koeffizienten;	
• analysieren die Regularität von Lösungen elliptischer Randwertprobleme im Inneren und am Rand.	
Kompetenzen:	
Nach erfolgreichem Absolvieren des Moduls sind die Studierenden in der Lage,	
• den Typ einer partiellen Differenzialgleichung zu erkennen und auf qualitative Eigenschaften ihrer Lösungen zu schließen;	
• mathematisch relevante Fragestellungen zu partiellen Differenzialgleichungen zu erkennen;	
• den Einfluss von Randbedingungen und Funktionenräumen auf Existenz, Eindeutigkeit und Stabilität von Lösungen zu beurteilen.	

Course: Partielle Differenzialgleichungen (Lecture)	4 WLH

Examination: Written examination (120 minutes)	9 C
Examination prerequisites: B.Mat.2100.Ue: Erreichen von mindestens 50% der Übungspunkte und zweimaliges Vorrechnen von Lösungen in den Übungen	

Course: Partielle Differenzialgleichungen - Übung (Exercise)	2 WLH

Examination requirements: Nachweis der Grundkenntnisse über partielle Differenzialgleichungen	

Admission requirements: none	**Recommended previous knowledge:** B.Mat.0021, B.Mat.0022
Language: German	**Person responsible for module:** Studiengangsbeauftragte/r

Learning outcome, core skills:	**Workload:**
Learning outcome:	Attendance time:
	84 h
The successful completion of modules of the cycle "Analytic number theory" enables students to learn methods, concepts, theories and applications in the area of "Analytic number theory". During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students	Self-study time: 186 h

- solve arithmetical problems with basic, complex-analytical, and Fourier-analytical methods;
- know characteristics of the Riemann zeta function and more general L-functions, and apply them to problems of number theory;
- are familiar with results and methods of prime number theory;
- acquire knowledge in arithmetical and analytical theory of automorphic forms, and its application in number theory;
- know basic sieving methods and apply them to the problems of number theory;
- know techniques used to estimate the sum of the sum of characters and of exponentials;
- analyse the distribution of rational points on suitable algebraic varieties using analytical techniques;
- master computation with asymptotic formulas, asymptotic analysis, and asymptotic equipartition in number theory.

Core skills:

After having successfully completed the module, students will be able to

- discuss basic concepts of the area "Analytical number theory";
- explain basic ideas of proof in the area "Analytical number theory";
- illustrate typical applications in the area "Analytical number theory".

| **Course: Lecture course** (Lecture) | 4 WLH |

Learning outcome, core skills:

Learning outcome:

The successful completion of modules of the cycle "Analysis of partial differential equations" enables students to learn methods, concepts, theories and applications in the area "Analysis of partial differential equations". During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students

- are familiar with the most important types of partial differential equations and know their solutions;
- master the Fourier transform and other techniques of the harmonic analysis to analyse partial differential equations;
- are familiar with the theory of generalized functions and the theory of function spaces and use these for solving differential partial equations;
- apply the basic principles of functional analysis to the solution of partial different equations;
- use different theorems of function theory for solving partial different equations;
- master different asymptotic techniques to study characteristics of the solutions of partial different equations;
- are paradigmatically familiar with broader application areas of linear theory of partial different equations;
- are paradigmatically familiar with broader application areas of non-linear theory of partial different equations;
- know the importance of partial different equations in the modelling in natural and engineering sciences;
- master some advanced application areas like parts of microlocal analysis or parts of algebraic analysis.

Core skills:

After having successfully completed the module, students will be able to

- discuss basic concepts of the area "Analysis of partial different equations";
- explain basic ideas of proof in the area "Analysis of partial different equations";
- illustrate typical applications in the area "Analysis of partial different equations".

Additional notes and regulations: **Instructor:** Lecturers at the Mathematical Institute

Georg-August-Universität Göttingen **Module B.Mat.3114: Introduction to algebraic topology**	9 C 6 WLH

Learning outcome, core skills: **Learning outcome:** In the modules of the cycle "Algebraic topology" students get to know the most important classes of topological spaces as well as algebraic and analytical tools for studying these spaces and the mappings between them. The students use these tools in geometry, mathematical physics, algebra and group theory. They are introduced to current research questions and enabled to carry out independent contributions to research, e. g. within the scope of a Master's thesis. Algebraic topology uses concepts and tools of algebra, geometry and analysis and can be applied to these areas. In the course offer several aspects are considered at a time and a cycle will only cover some of the learning objectives mentioned below. The introduction to the cycle and the specialisation in the cycle will normally cover different aspects of algebraic topology and supplement one another complementarily. The following content-related competencies are pursued. Students	**Workload:** Attendance time: 84 h Self-study time: 186 h

- know the basic concepts of set-theoretic topology and continuous mappings;
- construct new topologies from given topologies;
- know special classes of topological spaces and their special characteristics like CW complexes, simplicial complexes and manifolds;
- apply basic concepts of category theory to topological spaces;
- use concepts of functors to obtain algebraic invariants of topological spaces and mappings;
- know the fundamental group and the covering theory as well as the basic methods for the computation of fundamental groups and mappings between them;
- know homology and cohomology, calculate those for important examples and with the aid of these deduce non-existence of mappings as well as fixed-point theorems;
- calculate homology and cohomology with the aid of chain complexes;
- deduce algebraic characteristics of homology and cohomology with the aid of homological algebra;
- become acquainted with connections between analysis and topology;
- apply algebraic structures to deduce special global characteristics of the cohomology of a local structure of manifolds.

Core skills:

After having successfully completed the module, students will be able to

- discuss basic concepts of the area "Algebraic topology";
- explain basic ideas of proof in the area "Algebraic topology";
- illustrate typical applications in the area "Algebraic topology".

The successful completion of modules of the cycle "Algebraic number theory" enables students to learn methods, concepts, theories and applications in the areas "Algebraic number theory" and "Algorithmic number theory". During the course of the cycle students will be successively introduced to current theoretical and/or applied research topics and able to carry out independent contributions to research (e. g. within the scope of a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued in relation to algebra. Students	84 h
	Self-study time:
	186 h

- know Noetherian and Dedekind rings and the class groups;
- are familiar with discriminants, differents and bifurcation theory of Hilbert;
- know geometrical number theory with applications to the unit theorem and the finiteness of class groups as well as the algorithmic aspects of lattice theory (LLL);
- are familiar with L-series and zeta functions and discuss the algebraic meaning of their residues;
- know densities, the Tchebotarew theorem and applications;
- work with orders, S-integers and S-units;
- know the class field theory of Hilbert, Takagi and Idele theoretical field theory;
- are familiar with Zp-extensions and their Iwasawa theory;
- discuss the most important hypotheses of Iwasawa theory and their consequences.

Concerning algorithmic aspects of number theory, the following competencies are pursued. Students

- work with algorithms for the identification of short lattice bases, nearest points in lattices and the shortest vectors;
- are familiar with basic algorithms of number theory in long arithmetic like GCD, fast number and polynomial arithmetic, interpolation and evaluation and prime number tests;
- use the sieving method for factorisation and calculation of discrete logarithms in finite fields of great characteristics;
- discuss algorithms for the calculation of the zeta function of elliptic curves and Abelian varieties of finite fields;
- calculate class groups and fundamental units;
- calculate Galois groups of absolute number fields.

Core skills:

Depending on the current course offer the following content-related competencies may be pursued. Students	84 h Self-study time: 186 h

- are familiar with the phenomenon of illposedness and identify the degree of illposedness of typical inverse problems;
- evaluate different regularisation methods for ill posed inverse problems under algorithmic aspects and with regard to various a priori information and distinguish concepts of convergence for such methods with deterministic and stochastic data errors;
- analyse the convergence of regularisation methods with the help of spectral theory of bounded self-adjoint operators;
- analyse the convergence of regularisation methods with the help of complex analysis;
- analyse regularisation methods from stochastic error models;
- apply fully data-driven models for the choice of regularisation parameters and evaluate these for concrete problems;
- model identification problems in natural sciences and technology as inverse problems of partial differential equations where the unknown is e. g. a coefficient, an initial or a boundary condition or the shape of a region;
- analyse the uniqueness and conditional stability of inverse problems of partial differential equations;
- deduce sampling and testing methods for the solution of inverse problems of partial differential equations and analyse the convergence of such methods;
- formulate mathematical models of medical imaging like computed tomography (CT) or magnetic resonance tomography (MRT) and know the basic characteristics of corresponding operators.

Core skills:

After having successfully completed the module, students will be able to

- discuss basic concepts of the area "Inverse problems";
- explain basic ideas of proof in the area "Inverse problems";
- illustrate typical applications in the area "Inverse problems".

Course: Lecture course (Lecture)	4 WLH
Examination: written examination (120 minutes) or oral examination (appr. 20 minutes)	9 C

Examination prerequisites:	
B.Mat.3131.Ue: Achievement of at least 50% of the exercise points and presentation, twice, of solutions in the exercise sessions	

Course: Exercise session (Exercise)	2 WLH

Examination requirements:	
Proof of knowledge and mastery of basic competencies in the area "Inverse problems"	

Admission requirements:	**Recommended previous knowledge:**
none	B.Mat.1300
Language:	**Person responsible for module:**
English	Programme coordinator
Course frequency:	**Duration:**
not specified	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**
twice	Bachelor: 5 - 6; Master: 1 - 4
Maximum number of students:	
not limited	

Additional notes and regulations:
Instructor: Lecturers at the Institute of Numerical and Applied Mathematics

Georg-August-Universität Göttingen **Module B.Mat.3132: Introduction to approximation methods**	9 C 6 WLH
Learning outcome, core skills: **Learning outcome:** The successful completion of modules of the cycle "Approximation methods" enables students to learn methods, concepts, theories and applications in the area of "Approximation methods", so the approximation of one- and multidimensional functions as well as for the analysis and approximation of discrete signals and images. During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a practical course in scientific computing or a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students • are familiar with the modelling of approximation problems in suitable finite- and infinite-dimensional vector spaces; • can confidently handle models for the approximation of one- and multidimensional functions in Banach and Hilbert spaces; • know and use parts of classical approximation theory, e. g. Jackson and Bernstein theorems for the approximation quality for trigonometrical polynomials, approximation in translationally invariant spaces; polynomial reductions and Strang-Fix conditions; • acquire knowledge of continuous and discrete approximation problems and their corresponding solution strategies both in the one- and multidimensional case; • apply available software for the solution of the corresponding numerical methods and evaluate the results sceptically; • evaluate different numerical methods for the efficient solution of the approximation problems on the basis of the quality of the solutions, the complexity and their computing time; • acquire advanced knowledge about linear and non-linear approximation methods for multidimensional data; • are informed about current developments of efficient data approximation and data analysis; • adapt solution strategies for the data approximation using special structural characteristics of the approximation problem that should be solved. **Core skills:** After having successfully completed the module, students will be able to • discuss basic concepts of the area "Approximation methods"; • explain basic ideas of proof in the area "Approximation methods" for one- and multidimensional data; • illustrate typical applications in the area of data approximation and data analysis.	**Workload:** Attendance time: 84 h Self-study time: 186 h

Learning outcome:	Attendance time: 84 h
	Self-study time: 186 h

The successful completion of modules of the cycle "Numerics of partial differential equations" enables students to learn methods, concepts, theories and applications in the area of "Numerics of partial differential equations". During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a practical course in scientific computing or a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students

- are familiar with the theory of linear partial differential equations, e. g. questions of classification as well as existence, uniqueness and regularity of the solution;
- know the basics of the theory of linear integral equations;
- are familiar with basic methods for the numerical solution of linear partial differential equations with finite difference methods (FDM), finite element methods (FEM) as well as boundary element methods (BEM);
- analyse stability, consistence and convergence of FDM, FEM and BEM for linear problems;
- apply methods for adaptive lattice refinement on the basis of a posteriori error approximations;
- know methods for the solution of larger systems of linear equations and their preconditioners and parallelisation;
- apply methods for the solution of larger systems of linear and stiff ordinary differential equations and are familiar with the problem of differential algebraic problems;
- apply available software for the solution of partial differential equations and evaluate the results sceptically;
- evaluate different numerical methods on the basis of the quality of the solutions, the complexity and their computing time;
- acquire advanced knowledge in the theory as well as development and application of numerical solution strategies in a special area of partial differential equations, e. g. in variation problems with constraints, singularly perturbed problems or of integral equations;
- know propositions about the theory of non-linear partial differential equations of monotone and maximally monotone type as well as suitable iterative solution methods.

Core skills:

After having successfully completed the module, students will be able to

- discuss basic concepts of the area "Numerics of partial differential equations";
- explain basic ideas of proof in the area "Numerics of partial differential equations";
- illustrate typical applications in the area "Numerics of partial differential equations".

Learning outcome, core skills:	**Workload:**
Learning outcome:	Attendance time:
	84 h
The successful completion of modules of the cycle "Optimisation" enables students to learn methods, concepts, theories and applications in the area of "Optimisation", so the discrete and continuous optimisation. During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a practical course in scientific computing or a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students	Self-study time: 186 h

- identify optimisation problems in application-oriented problems and formulate these as mathematical programmes;
- evaluate the existence and uniqueness of the solution of an optimisation problem;
- identify structural characteristics of an optimisation problem, amongst others the existence of a finite candidate set, the structure of the underlying level set;
- know which special characteristics of the target function and the constraints (like (virtual) convexity, dc functions) for the development of solution strategies can be utilised;
- analyse the complexity of an optimisation problem;
- classify a mathematical programme in a class of optimisation problems and know current solution strategies for it;
- develop optimisation methods and adapt general methods to special problems;
- deduce upper and lower bounds for optimisation problems and understand their meaning;
- understand the geometrical structure of an optimisation problem and apply it for solution strategies;
- distinguish between proper solution methods, approximation methods with quality guarantee and heuristics and evaluate different methods on the basis of the quality of the found solutions and their computing times;
- acquire advanced knowledge in the development of solution strategies on the basis of a special area of optimisation, e. g. integer optimisation, optimisation of networks or convex optimisation;
- acquire advanced knowledge for the solution of special optimisation problems of an application-oriented area, e. g. traffic planning or location planning;
- handle advanced optimisation problems, like e. g. optimisation problems with uncertainty or multi-criteria optimisation problems.

Core skills:

After having successfully completed the module, students will be able to

- discuss basic concepts of the area "Optimisation";
- explain basic ideas of proof in the area "Optimisation";
- illustrate typical applications in the area "Optimisation".

The successful completion of modules of the cycle "Applied and mathematical stochastics" enables students to understand and apply a broad range of problems, theories, modelling and proof techniques of stochastics. During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued: Students	Self-study time: 186 h

- are familiar with advanced concepts of probability theory established on measure theory and apply them independently;
- are familiar with substantial concepts and approaches of probability modelling and inferential statistics;
- know basic characteristics of stochastic processes as well as conditions for their existence and uniqueness;
- have a pool of different stochastic processes in time and space at their disposal and characterise those, differentiate them and quote examples;
- understand and identify basic characteristics of invariance of stochastic processes like stationary processes and isotropy;
- analyse the convergence characteristic of stochastic processes;
- analyse regularity characteristics of the paths of stochastic processes;
- adequately model temporal and spatial phenomena in natural and economic sciences as stochastic processes, if necessary with unknown parameters;
- analyse probabilistic and statistic models regarding their typical characteristics, estimate unknown parameters and make predictions for their paths on areas not observed / at times not observed;
- discuss and compare different modelling approaches and evaluate the reliability of parameter estimates and predictions sceptically.

Core skills:

After having successfully completed the module, students will be able to

- discuss basic concepts of the area "Applied and mathematical stochastics";
- explain basic ideas of proof in the area "Applied and mathematical stochastics";
- illustrate typical applications in the area "Applied and mathematical stochastics".

The successful completion of modules of the cycle "Stochastic processes" enables students to learn and apply methods, concepts, theories and proof techniques in the area of "Stochastic processes" and use these for the modelling of stochastic systems. During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students	84 h Self-study time: 186 h

- are familiar with advanced concepts of probability theory established on measure theory and apply them independently;
- know basic characteristics as well as existence and uniqueness results for stochastic processes and formulate suitable probability spaces;
- understand the relevance of the concepts of filtration, conditional expectation and stopping time for the theory of stochastic processes;
- know fundamental classes of stochastic processes (like e. g. Poisson processes, Brownian motions, Levy processes, stationary processes, multivariate and spatial processes as well as branching processes) and construct and characterise these processes;
- analyse regularity characteristics of the paths of stochastic processes;
- construct Markov chains with discrete and general state spaces in discrete and continuous time, classify their states and analyse their characteristics;
- are familiar with the theory of general Markov processes and characterise and analyse these with the use of generators, semigroups, martingale problems and Dirichlet forms;
- analyse martingales in discrete and continuous time using the corresponding martingale theory, especially using martingale equations, martingale convergence theorems, martingale stopping theorems and martingale representation theorems;
- formulate stochastic integrals as well as stochastic differential equations with the use of the Ito calculus and analyse their characteristics;
- are familiar with stochastic concepts in general state spaces as well as with the topologies, metrics and convergence theorems relevant for stochastic processes;
- know fundamental convergence theorems for stochastic processes and generalise these;
- model stochastic systems from different application areas in natural sciences and technology with the aid of suitable stochastic processes;
- analyse models in mathematical economics and finance and understand evaluation methods for financial products.

Core skills:

After having successfully completed the module, students will be able to

Learning outcome, core skills: **Learning outcome:**	**Workload:** Attendance time: 84 h Self-study time: 186 h

The successful completion of modules of the cycle "Analysis of partial differential equations" enables students to learn methods, concepts, theories and applications in the area "Analysis of partial differential equations". During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students

- are familiar with the most important types of partial differential equations and know their solutions;
- master the Fourier transform and other techniques of the harmonic analysis to analyse partial differential equations;
- are familiar with the theory of generalised functions and the theory of function spaces and use these for solving differential partial equations;
- apply the basic principles of functional analysis to the solution of partial different equations;
- use different theorems of function theory for solving partial different equations;
- master different asymptotic techniques to study characteristics of the solutions of partial different equations;
- are paradigmatically familiar with broader application areas of linear theory of partial different equations;
- are paradigmatically familiar with broader application areas of non-linear theory of partial different equations;
- know the importance of partial different equations in the modelling in natural and engineering sciences;
- master some advanced application areas like parts of microlocal analysis or parts of algebraic analysis.

Core skills:

After having successfully completed the module, students will be able to

- handle methods and concepts of the area "Analysis of partial differential equations" confidently;
- explain complex issues of the area "Analysis of partial differential equations";
- apply methods of the area "Analysis of partial differential equations" to new problems in this area.

The successful completion of modules of the cycle "Differential geometry" enables students to learn methods, concepts, theories and applications in the area "Differential geometry". During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students

• master the basic concepts of differential geometry;
• develop a spatial sense using the examples of curves, surfaces and hypersurfaces;
• develop an understanding of the basic concepts of differential geometry like "space" and "manifolds", "symmetry" and "Lie group", "local structures" and "curvature", "global structure" and "invariants" as well as "integrability";
• master (variably weighted and sorted depending on the current courses offered) the theory of transformation groups and symmetries as well as the analysis on manifolds, the theory of manifolds with geometric structures, complex differential geometry, gauge field theory and their applications as well as the elliptical differential equations of geometry and gauge field theory;
• develop an understanding for geometrical constructs, spatial patterns and the interaction of algebraic, geometrical, analytical and topological methods;
• acquire the skill to apply methods of analysis, algebra and topology for the treatment of geometrical problems;
• are able to import geometrical problems to a broader mathematical and physical context.

Core skills:

After having successfully completed the module, students will be able to

| **Learning outcome, core skills:**
Learning outcome:

In the modules of the cycle "Algebraic topology" students get to know the most important classes of topological spaces as well as algebraic and analytical tools for studying these spaces and the mappings between them. The students use these tools in geometry, mathematical physics, algebra and group theory. They are introduced to current research questions and enabled to carry out independent contributions to research, e. g. within the scope of a Master's thesis.

Algebraic topology uses concepts and tools of algebra, geometry and analysis and can be applied to these areas. In the course offer several aspects are considered at a time and a cycle will only cover some of the learning objectives mentioned below. The introduction to the cycle and the specialisation in the cycle will normally cover different aspects of algebraic topology and supplement one another complementarily. The following content-related competencies are pursued. Students

• know the basic concepts of set-theoretic topology and continuous mappings;
• construct new topologies from given topologies;
• know special classes of topological spaces and their special characteristics like CW complexes, simplicial complexes and manifolds;
• apply basic concepts of category theory to topological spaces;
• use concepts of functors to obtain algebraic invariants of topological spaces and mappings;
• know the fundamental group and the covering theory as well as the basic methods for the computation of fundamental groups and mappings between them;
• know homology and cohomology, calculate those for important examples and with the aid of these deduce non-existence of mappings as well as fixed-point theorems;
• calculate homology and cohomology with the aid of chain complexes;
• deduce algebraic characteristics of homology and cohomology with the aid of homological algebra;
• become acquainted with connections between analysis and topology;
• apply algebraic structures to deduce special global characteristics of the cohomology of a local structure of manifolds.

Core skills:

After having successfully completed the module, students will be able to

• handle methods and concepts of the area "Algebraic topology" confidently;
• explain complex issues of the area "Algebraic topology";

In the modules of the cycle "Mathematical methods of physics" students get to know different mathematical methods and techniques that play a role in modern physics. They are introduced to current research questions and enabled to carry out independent contributions to research, e. g. within the scope of a Master's thesis.	Self-study time: 186 h
The topics of the cycle can be divided into four blocks, a cycle normally contains parts of different blocks, that topically supplement each other, but can also be read within one block. The introducing parts of the cycle form the basis for the advanced specialisation area. The topic blocks are	
• harmonic analysis, algebraic structures and representation theory, (group) effects; • operator algebra, C* algebra and von-Neumann algebra; • operator theory, perturbation and scattering theory, special PDE, microlocal analysis, distributions; • (semi) Riemannian geometry, symplectic and Poisson geometry, quantization.	
One of the aims is that a connection to physical problems is visible, at least in the motivation of the covered topics. Preferably, in the advanced part of the cycle, the students should know and be able to carry out practical applications themselves.	
Core skills:	
After having successfully completed the module, students will be able to	
• handle methods and concepts of the area "Mathematical methods in physics" confidently; • explain complex issues of the area "Mathematical methods in physics"; • apply methods of the area "Mathematical methods in physics" to new problems in this area.

In the modules of the cycle "Algebraic geometry" students get to know the most important classes of algebraic varieties and schemes as well as the tools for studying these objects and the mappings between them. The students apply these skills to problems of arithmetic or complex analysis. They are introduced to current research questions and enabled to carry out independent contributions to research, e. g. within the scope of a Master's thesis.	Self-study time: 186 h

Algebraic geometry uses and connects concepts of algebra and geometry and can be used versatilely. In the course offer several aspects are considered at a time and a cycle will only cover some of the learning objectives mentioned below. The introduction to the cycle and the specialisation in the cycle will normally cover different aspects of algebraic geometry and supplement one another complementarily. The following content-related competencies are pursued. Students

- are familiar with commutative algebra, also in greater detail;
- know the concepts of algebraic geometry, especially varieties, schemes, sheafs, bundles;
- examine important examples like elliptic curves, Abelian varieties or algebraic groups;
- use divisors for classification questions;
- study algebraic curves;
- prove the Riemann-Roch theorem and apply it;
- use cohomological concepts and know the basics of Hodge theory;
- apply methods of algebraic geometry to arithmetical questions and obtain e. g. finiteness principles for rational points;
- classify singularities and know the significant aspects of the dimension theory of commutative algebra and algebraic geometry;
- get to know connections to complex analysis and to complex geometry.

Core skills:

After having successfully completed the module, students will be able to

- handle methods and concepts of the area "Algebraic geometry" confidently;
- explain complex issues of the area "Algebraic geometry";
- apply methods of the area "Algebraic geometry" to new problems in this area.

Depending on the current course offer the following content-related competencies may be pursued. Students	Self-study time: 186 h

- identify optimisation problems in application-oriented problems and formulate these as mathematical programmes;
- evaluate the existence and uniqueness of the solution of an optimisation problem;
- identify structural characteristics of an optimisation problem, amongst others the existence of a finite candidate set, the structure of the underlying level set;
- know which special characteristics of the target function and the constraints (like (virtual) convexity, dc functions) for the development of solution strategies can be utilised;
- analyse the complexity of an optimisation problem;
- classify a mathematical programme in a class of optimisation problems and know current solution strategies for it;
- develop optimisation methods and adapt general methods to special problems;
- deduce upper and lower bounds for optimisation problems and understand their meaning;
- understand the geometrical structure of an optimisation problem and apply it for solution strategies;
- distinguish between proper solution methods, approximation methods with quality guarantee and heuristics and evaluate different methods on the basis of the quality of the found solutions and their computing times;
- acquire advanced knowledge in the development of solution strategies on the basis of a special area of optimisation, e. g. integer optimisation, optimisation of networks or convex optimisation;
- acquire advanced knowledge for the solution of special optimisation problems of an application-oriented area, e. g. traffic planning or location planning;
- handle advanced optimisation problems, like e. g. optimisation problems with uncertainty or multi-criteria optimisation problems.

Core skills:

After having successfully completed the module, students will be able to

- handle methods and concepts of the area "Optimisation" confidently;
- explain complex issues of the area "Optimisation";
- apply methods of the area "Optimisation" to new problems in this area.

Course: Lecture course (Lecture)	4 WLH
Examination: Oral examination (approx. 20 minutes) **Examination prerequisites:** B.Mat.3334.Ue: Achievement of at least 50% of the exercise points and presentation, twice, of solutions in the exercise sessions	9 C

Course: Exercise session (Exercise)	2 WLH
Examination requirements: Proof of advancement of knowledge and competencies acquired in the introductory module of the area "Optimisation"	

Admission requirements: none	**Recommended previous knowledge:** B.Mat.3134
Language: English	**Person responsible for module:** Programme coordinator
Course frequency: Usually subsequent to the module B.Mat.3134 "Introduction to optimisation"	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** Bachelor: 6; Master: 1 - 4
Maximum number of students: not limited	

Additional notes and regulations:
Instructor: Lecturers at the Institute of Numerical and Applied Mathematics

Georg-August-Universität Göttingen **Module B.Mat.3338: Advances in image and geometry processing**	9 C 6 WLH
Learning outcome, core skills: **Learning outcome:** The successful completion of modules of the cycle "Image and geometry processing" enables students to learn and apply methods, concepts, theories and applications in the area of "Image and geometry processing", so the digital image and geometry processing. During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a practical course in scientific computing or a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students • are familiar with the modelling of problems of image and geometry processing in suitable finite- and infinite-dimensional vector spaces; • learn basic methods for the analysis of one- and multidimensional functions in Banach and Hilbert spaces; • learn basic mathematical concepts and methods that are used in image processing, like Fourier and Wavelet transform; • learn basic mathematical concepts and methods that play a central role in geometry processing, like curvature of curves and surfaces; • acquire knowledge about continuous and discrete problems of image data analysis and their corresponding solution strategies; • know basic concepts and methods of topology; • are familiar with visualisation software; • apply available software for the solution of the corresponding numerical methods and evaluate the results sceptically; • know which special characteristics of an image or of a geometry can be extracted and worked on with which methods; • evaluate different numerical methods for the efficient analysis of multidimensional data on the basis of the quality of the solutions, the complexity and their computing time; • acquire advanced knowledge about linear and non-linear methods for the geometrical and topological analysis of multidimensional data; • are informed about current developments of efficient geometrical and topological data analysis; • adapt solution strategies for the data analysis using special structural characteristics of the given multidimensional data. **Core skills:** After having successfully completed the module, students will be able to • handle methods and concepts of the area "Image and geometry processing" confidently; • explain complex issues of the area "Image and geometry processing";	**Workload:** Attendance time: 84 h Self-study time: 186 h

- apply methods of the area "Image and geometry processing" to new problems in this area.

Course: Lecture course (Lecture)	4 WLH
Examination: Oral examination (approx. 20 minutes) **Examination prerequisites:** B.Mat.3338.Ue: Achievement of at least 50% of the exercise points and presentation, twice, of solutions in the exercise sessions	9 C

Course: Exercise session (Exercise)	2 WLH

Examination requirements:
Proof of advancement of knowledge and competencies acquired in the introductory module of the area "Image and geometry processing"

Admission requirements: none	Recommended previous knowledge: B.Mat.3138
Language: English	Person responsible for module: Programme coordinator

Learning outcome:

The successful completion of modules of the cycle "Applied and mathematical stochastics" enables students to understand and apply a broad range of problems, theories, modelling and proof techniques of stochastics. During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued: Students

• are familiar with advanced concepts of probability theory established on measure theory and apply them independently;
• are familiar with substantial concepts and approaches of probability modelling and inferential statistics;
• know basic characteristics of stochastic processes as well as conditions for their existence and uniqueness;
• have a pool of different stochastic processes in time and space at their disposal and characterise those, differentiate them and quote examples;
• understand and identify basic characteristics of invariance of stochastic processes like stationary processes and isotropy;
• analyse the convergence characteristic of stochastic processes;
• analyse regularity characteristics of the paths of stochastic processes;
• adequately model temporal and spatial phenomena in natural and economic sciences as stochastic processes, if necessary with unknown parameters;
• analyse probabilistic and statistic models regarding their typical characteristics, estimate unknown parameters and make predictions for their paths on areas not observed / at times not observed;
• discuss and compare different modelling approaches and evaluate the reliability of parameter estimates and predictions sceptically.

Core skills:

After having successfully completed the module, students will be able to

• handle methods and concepts of the area "Applied and mathematical stochastics" confidently;
• explain complex issues of the area "Applied and mathematical stochastics";

Depending on the current course offer the following content-related competencies may be pursued. Students	Self-study time: 186 h

- are familiar with the most important methods of mathematical statistics like estimates, testing, confidence propositions and classification and use them in simple models of mathematical statistics;
- evaluate statistical methods mathematically precisely via suitable risk and loss concepts;
- analyse optimality characteristics of statistical estimate methods via lower and upper bounds;
- analyse the error rates of statistical testing and classification methods based on the Neyman Pearson theory;
- are familiar with basic statistical distribution models that base on the theory of exponential indexed families;
- know different techniques to obtain lower and upper risk bounds in these models;
- are confident in modelling typical data structures of regression;
- analyse practical statistical problems in a mathematically accurate way with the techniques learned on the one hand and via computer simulations on the other hand;
- are able to mathematically analyse resampling methods and apply them purposively;
- are familiar with advanced tools of non-parametric statistics and empirical process theory;
- independently become acquainted with a current topic of mathematical statistics;
- evaluate complex statistical methods and enhance them in a problem-oriented way.

Core skills:

Learning outcome, core skills:	**Workload:**
Lernziele:	Attendance time:
	28 h
In den Modulen zum Zyklus "Algebraische Topologie" lernen die Studierenden die wichtigsten Klassen topologischer Räume kennen sowie die algebraischen und analytischen Werkzeuge für das Studium dieser Räume und der Abbildungen zwischen ihnen. Die Studierenden wenden diese Werkzeuge in Geometrie, mathematischer Physik, Algebra und Gruppentheorie an. Sie werden an aktuelle Forschungsfragen herangeführt und befähigt, erste eigene Beiträge zur Forschung in diesem Bereich zu leisten, etwa im Rahmen einer Masterarbeit.	Self-study time: 62 h

Die algebraische Topologie benutzt Ideen und Werkzeuge aus Algebra, Geometrie und Analysis und kann auf diese Bereiche angewandt werden. Im Lehrangebot werden jeweils einige Aspekte betrachtet, und ein Zyklus wird nur einige der unten genannten inhaltlichen Lernziele behandeln. Die Einführung in den Zyklus und die Spezialisierung im Zyklus werden in der Regel verschiedene Aspekte der algebraischen Topologie behandeln und sich komplementär ergänzen. Folgende inhaltsbezogenen Kompetenzen werden angestrebt. Die Studierenden

- kennen die grundlegenden Konzepte der mengentheoretischen Topologie und der stetigen Abbildungen;
- konstruieren aus gegebenen Topologien neue Topologien;
- kennen spezielle Klassen topologischer Räume und deren spezielle Eigenschaften wie CW-Komplexe, Simplizialkomplexe und Mannigfaltigkeiten;
- wenden grundlegende Konzepte der Kategorientheorie auf topologische Räume an;
- nutzen Konzepte der Funktoren um algebraische Invarianten von topologischen Räumen und Abbildungen zu erhalten;
- kennen die Fundamentalgruppe und die Überlagerungstheorie sowie die grundlegenden Methoden zur Berechnung von Fundamentalgruppen und Abbildungen zwischen ihnen;
- kennen Homologie und Kohomologie, berechnen diese für wichtige Beispiele und leiten mit ihrer Hilfe Nicht-Existenz von Abbildungen sowie Fixpunktsätze her;
- berechnen Homologie und Kohomologie mit Hilfe von Kettenkomplexen;
- leiten mit Hilfe der homologischen Algebra algebraische Eigenschaften von Homologie und Kohomologie her;
- lernen Verbindungen zwischen Analysis und Topologie kennen;
- wenden algebraische Strukturen an, um aus der lokalen Struktur von Mannigfaltigkeiten spezielle globale Eigenschaften ihrer Kohomologie herzuleiten.

Kompetenzen:

Nach erfolgreichem Absolvieren des Moduls sind die Studierenden in der Lage,

- sich in ein mathematisches Thema im Bereich "Algebraische Topologie" einzuarbeiten und in einem Vortrag vorzustellen;

- wissenschaftliche Diskussionen in einem bekannten Kontext zu führen.

In den Modulen zum Zyklus "Algebraische Geometrie" lernen die Studierenden die wichtigsten Klassen algebraischer Varietäten und Schemata kennen sowie die Werkzeuge für das Studium dieser Objekte und der Abbildungen zwischen ihnen. Die Studierenden wenden diese Kenntnisse auf Probleme der Arithmetik oder der komplexen Analysis an. Sie werden an aktuelle Forschungsfragen herangeführt und befähigt, erste Beiträge zur Forschung zu leisten, etwa im Rahmen einer Masterarbeit.	Self-study time: 62 h

Die algebraische Geometrie benutzt und verbindet Ideen aus Algebra und Geometrie und kann vielseitig angewandt werden. Im Lehrangebot werden jeweils einige Aspekte betrachtet, und ein Zyklus wird nur einige der unten genannten inhaltlichen Lernziele behandeln. Die Einführung in den Zyklus und die Spezialisierung werden in der Regel verschiedene Aspekte der algebraischen Geometrie behandeln und sich komplementär ergänzen. Folgende inhaltbezogene Kompetenzen werden angestrebt. Die Studierenden

- sind mit der kommutativen Algebra auch in tiefer liegenden Details vertraut;
- kennen den Begriffsapparat der algebraischen Geometrie, insbesondere Varietäten, Schemata, Garben, Bündel;
- untersuchen wichtige Beispiele wie elliptische Kurven, abelsche Varietäten oder algebraische Gruppen;
- verwenden Divisoren für Klassifikationsfragen;
- studieren algebraische Kurven;
- beweisen den Satz von Riemann-Roch beweisen und wenden ihn an;
- benutzen kohomologische Konzepte und kennen die Grundlagen der Hodge-Theorie;
- wenden Methoden der algebraischen Geometrie auf arithmetische Fragen an und gewinnen z.B. Endlichkeitssätze für rationale Punkte;
- klassifizieren Singularitäten und kennen die wesentlichen Aspekte der Dimensionstheorie der kommutativen Algebra und der algebraischen Geometrie;
- lernen Verbindungen zur komplexen Analysis und komplexen Geometrie kennen.

Kompetenzen:

Nach erfolgreichem Absolvieren des Moduls sind die Studierenden in der Lage,

- sich in ein mathematisches Thema im Bereich "Algebraische Geometrie" einzuarbeiten und in einem Vortrag vorzustellen;
- wissenschaftliche Diskussionen in einem bekannten Kontext zu führen.

Das erfolgreiche Absolvieren von Modulen zum Zyklus "Algebraische Zahlentheorie" ermöglicht den Studierenden, Methoden, Begriffe, Theorien und Anwendungen in den Bereichen "Algebraische Zahlentheorie" und "Algorithmische Zahlentheorie" kennenzulernen. Sie werden sukzessive an aktuelle Forschungsthemen theoretischer und/oder angewandter Natur herangeführt und befähigt, in diesem Bereich erste eigene Beiträge zur Forschung zu leisten (z.B. im Rahmen einer Masterarbeit). Je nach aktuellem Lehrangebot unterschiedlich geordnet und gewichtet werden in algebraischer Hinsicht folgende inhaltsbezogene Lernziele angestrebt. Die Studierenden	Self-study time: 62 h

- kennen Noethersche und Dedekind'sche Ringe und die Klassengruppen;
- sind mit Diskriminanten, Differenten und der Verzweigungstheorie von Hilbert vertraut;
- kennen geometrische Zahlentheorie mit Anwendung auf den Einheitensatz und die Endlichkeit von Klassengruppen wie auch die algorithmischen Aspekte von Gittertheorie (LLL);
- sind mit L-Reihen und Zeta-Funktionen vertraut und diskutieren die algebraische Bedeutung ihrer Residuen;
- kennen Dichten, den Satz von Tchebotarew und Anwendungen;
- arbeiten mit Ordnungen, S-ganzen Zahlen und S-Einheiten;
- kennen die Klassenkörpertheorie von Hilbert, Takagi und Idèle-theoretische Klassenkörpertheorie;
- sind mit Zp-Erweiterungen und ihrer Iwasawa-Theorie vertraut;
- diskutieren die wichtigsten Vermutungen der Iwasawa-Theorie und deren Konsequenzen.

Hinsichtlich algorithmischer Aspekte der Zahlentheorie werden folgende Kompetenzen angestrebt. Die Studierenden

- arbeiten mit Algorithmen zur Bestimmung von kurzen Gitterbasen, nächsten Punkten in Gittern und kürzesten Vektoren;
- sind mit Grundalgorithmen der Zahlentheorie in langer Arithmetik wie GCD, schneller Zahl- und Polynomarithmetik, Interpolation und Evaluation und Primheitstests vertraut;
- verwenden die Siebmethode zur Faktorisierung und Berechnung von diskreten Logarithmen in endlichen Körpern großer Charakteristik;
- diskutieren Algorithmen zur Berechnung der Zeta-Funktion von elliptischen Kurven und abelschen Varietäten über endlichen Körpern;
- berechnen Klassengruppen und Fundamentaleinheiten;
- berechnen Galoisgruppen absoluter Zahlkörper.

Kompetenzen:

Nach erfolgreichem Absolvieren des Moduls sind die Studierenden in der Lage,

- sich in ein mathematisches Thema im Bereich "Algebraische Zahlentheorie" einzuarbeiten und in einem Vortrag vorzustellen;
- wissenschaftliche Diskussionen in einem bekannten Kontext zu führen.

- kennen grundlegende Konzepte wie Ringe, Moduln, Algebren und Lie-Algebren;
- kennen wichtige Beispiele von Lie-Algebren und Algebren;
- kennen spezielle Klassen von Lie-Gruppen und ihre speziellen Eigenschaften;
- kennen Klassifikationsaussagen für endlich-dimensionale Algebren;
- wenden grundlegende Konzepte der Kategorientheorie auf Algebren und Moduln an;
- kennen Gruppenaktionen und deren grundlegenden Klassifikationen;
- wenden die einhüllende Algebra von Lie-Algebren an;
- wenden Ring- und Modul-Theorie auf grundlegende Konstruktionen algebraischer Geometrie an;
- wenden kombinatorische Werkzeuge auf die Untersuchung assoziativer Algebren und Lie-Algebren an;
- erwerben solide Kenntnisse der Darstellungstheorie von Lie-Algebren, endlichen Gruppen und kompakten Lie-Gruppen sowie der Darstellungstheorie halbeinfacher Lie-Gruppen;
- kennen Hopf-Algebren sowie deren Deformations- und Darstellungstheorie.

Kompetenzen:

Nach erfolgreichem Absolvieren des Moduls sind die Studierenden in der Lage,

- sich in ein mathematisches Thema im Bereich "Algebraische Strukturen" einzuarbeiten und in einem Vortrag vorzustellen;
- wissenschaftliche Diskussionen in einem bekannten Kontext zu führen.

Course: Seminar (2 SWS) (Seminar)	
Examination: Oral Presentation (approx. 75 minutes)	3 C

Examination prerequisites:

Teilnahme am Seminar

Examination requirements:

Selbständige Durchdringung und Darstellung komplexer mathematischer Sachverhalte
im Bereich "Algebraische Strukturen"

Admission requirements:	**Recommended previous knowledge:**
none	B.Mat.3123
Language:	**Person responsible for module:**
English, German	Studiengangsbeauftragte/r
Course frequency:	**Duration:**
unregelmäßig	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**
twice	6
Maximum number of students:	
not limited	

Additional notes and regulations:

Dozent/in: Lehrpersonen des Mathematischen Instituts

Georg-August-Universität Göttingen **Module B.Mat.3424: Seminar on groups, geometry and dynamical systems**	3 C 2 WLH

Learning outcome, core skills:	**Workload:**
Lernziele: In den Modulen des Zyklus "Gruppen, Geometrie und Dynamische Systeme" lernen die Studierenden wichtige Klassen von Gruppen kennen sowie die für ihre Untersuchung und ihre Anwendungen nötigen algebraischen, geometrischen und analytischen Werkzeuge. Sie werden an aktuelle Forschungsfragen herangeführt und befähigt, erste eigene Beiträge zur Forschung in diesem Bereich zu leisten, etwa im Rahmen einer Masterarbeit. Gruppentheorie benutzt Ideen und Werkzeuge aus Algebra, Geometrie und Analysis und kann auf diese Bereiche angewandt werden. Im Lehrangebot werden jeweils einige Aspekte betrachtet, und ein Zyklus wird nur einige der unten genannten inhaltlichen Lernziele behandeln. Die Einführung in den Zyklus und die Spezialisierung im Zyklus werden in der Regel verschiedene Aspekte aus dem Bereich "Gruppen, Geometrie und Dynamische Systeme" behandelt, die sich komplementär ergänzen. Folgende inhaltsbezogenen Kompetenzen werden angestrebt. Die Studierenden, • kennen grundlegende Konzepte von Gruppen und Gruppenhomomorphismen; • kennen wichtige Beispiele von Gruppen; • kennen spezielle Klassen von Gruppen und deren spezielle Eigenschaften; • wenden grundlegende Konzepte der Kategorientheorie auf Gruppen an und definieren Räume durch universelle Eigenschaften; • wenden die Konzepte von Funktoren an um algebraische Invarianten zu gewinnen; • kennen Gruppenaktionen und deren grundlegenden Klassifikationsresultate; • kennen die Grundlagen der Gruppenkohomologie und berechnen diese für wichtige Beispiele; • kennen die Grundlagen der geometrischen Gruppentheorie wie Wachstumseigenschaften; • kennen selbstähnliche Gruppen, deren grundlegende Konstruktion sowie Beispiele mit interessanten Eigenschaften; • nutzen geometrische und kombinatorische Werkzeuge für die Untersuchung von Gruppen; • kennen die Grundlagen der Darstellungstheorie kompakter Lie-Gruppen. **Kompetenzen:** Nach erfolgreichem Absolvieren des Moduls sind die Studierenden in der Lage, • sich in ein mathematisches Thema im Bereich "Gruppen, Geometrie und Dynamische Systeme" einzuarbeiten und in einem Vortrag vorzustellen; • wissenschaftliche Diskussionen in einem bekannten Kontext zu führen.	Attendance time: 28 h Self-study time: 62 h

Lernziele:	Attendance time:
	28 h
Das erfolgreiche Absolvieren von Modulen zum Zyklus "Approximationsverfahren" ermöglicht den Studierenden, Methoden, Begriffe, Theorien und Anwendungen im Bereich "Approximationsverfahren", also der Approximation von ein- und mehrdimensionalen Funktionen sowie zur Analyse und Approximation von diskreten Signalen und Bildern kennenzulernen. Sie werden sukzessive an aktuelle Forschungsthemen herangeführt und befähigt, in diesem Bereich erste eigene Beiträge zur Forschung zu leisten (z.B. im Rahmen eines Praktikums im wissenschaftlichen Rechnen oder einer Masterarbeit). Je nach aktuellem Lehrangebot unterschiedlich geordnet und gewichtet werden folgende inhaltsbezogene Kompetenzen angestrebt.	Self-study time: 62 h

Die Studierenden

- sind mit der Modellierung von Approximationsproblemen in geeigneten endlich und unendlich-dimensionalen Vektorräumen vertraut;
- gehen sicher mit Modellen zur Approximation von ein- und mehrdimensionalen Funktionen in Banach- und Hilberträumen um;
- kennen und verwenden Elemente der klassischen Approximationstheorie, wie z.B. Jackson- und Bernstein-Sätze zur Approximationsgüte für trigonometrische Polynome, Approximation in translationsinvarianten Räumen, Polynomreproduktion und Strang-Fix-Bedingungen;
- erwerben Kenntnisse zu kontinuierlichen und zu diskreten Approximationsproblemen und den zugehörigen Lösungsstrategien im ein- und mehrdimensionalen Fall;
- wenden verfügbare Software zur Lösung der zugehörigen numerischen Verfahren an und bewerten die Ergebnisse kritisch;
- bewerten verschiedene numerische Verfahren zur effizienten Lösung der Approximationsprobleme anhand der Qualität der Lösungen, der Komplexität und ihrer Rechenzeit;
- erwerben vertiefte Kenntnisse zu linearen und nichtlinearen Approximationsverfahren für mehrdimensionale Daten;
- sind über aktuelle Entwicklungen in der effizienten Datenapproximation und Datenanalyse informiert;
- adaptieren Lösungsstrategien zur Datenapproximation unter Ausnutzung spezieller struktureller Eigenschaften des zu lösenden Approximationsproblems.

Kompetenzen:

Nach erfolgreichem Absolvieren des Moduls sind die Studierenden in der Lage,

- sich in ein mathematisches Thema im Bereich "Approximationsverfahren" einzuarbeiten und in einem Vortrag vorzustellen;
- wissenschaftliche Diskussionen in einem bekannten Kontext zu führen.

Course: Seminar (2 SWS) (Seminar)

den Studierenden, Methoden, Begriffe, Theorien und Anwendungen im Bereich	62 h
"Optimierung", also der diskreten und kontinuierlichen Optimierung, kennenzulernen.	

Sie werden sukzessive an aktuelle Forschungsthemen herangeführt und befähigt, in diesem Bereich erste eigene Beiträge zur Forschung zu leisten (z.B. im Rahmen eines Praktikums im wissenschaftlichen Rechnen oder einer Masterarbeit). Je nach aktuellem Lehrangebot unterschiedlich geordnet und gewichtet werden folgende inhaltsbezogene Kompetenzen angestrebt. Die Studierenden

- erkennen Optimierungsprobleme in anwendungsorientierten Fragestellungen und formulieren sie als mathematische Programme;
- beurteilen Existenz und Eindeutigkeit der Lösung eines Optimierungsproblemes;
- erkennen strukturelle Eigenschaften eines Optimierungsproblemes, u.a. die Existenz einer endlichen Kandidatenmenge, die Struktur der zugrunde liegenden Niveaumengen;
- wissen, welche speziellen Eigenschaften der Zielfunktion und der Nebenbedingungen (wie (quasi-)Konvexität, dc-Funktionen) bei der Entwicklung von Lösungsverfahren ausgenutzt werden können;
- analysieren die Komplexität eines Optimierungsproblemes;
- ordnen ein mathematisches Programm in eine Klasse von Optimierungsproblemen ein und kennen dafür die gängigen Lösungsverfahren;
- entwickeln Optimierungsverfahren und passen allgemeine Verfahren auf spezielle Probleme an;
- leiten obere und untere Schranken an Optimierungsprobleme her und verstehen ihre Bedeutung;
- verstehen die geometrische Struktur eines Optimierungsproblemes und machen sie sich bei Lösungsverfahren zunutze;
- unterscheiden zwischen exakten Lösungsverfahren, Approximationsverfahren mit Gütegarantie und Heuristiken und bewerten verschiedene Verfahren anhand der Qualität der aufgefundenen Lösungen und ihrer Rechenzeit;
- erwerben vertiefte Kenntnisse in der Entwicklung von Lösungsverfahren anhand eines speziellen Bereiches der Optimierung, z.B. der ganzzahligen Optimierung, der Optimierung auf Netzwerken oder der konvexen Optimierung;
- erwerben vertiefte Kenntnisse bei der Lösung von speziellen Optimierungsproblemen aus einem anwendungsorientierten Bereich, z.B. der Verkehrsplanung oder der Standortplanung;
- gehen mit erweiterten Optimierungsproblemen um, wie z.B. Optimierungsproblemen unter Unsicherheit oder multikriteriellen Optimierungsproblemen.

Kompetenzen:

Nach erfolgreichem Absolvieren des Moduls sind die Studierenden in der Lage,

- sich in ein mathematisches Thema im Bereich "Optimierung" im Bereich "Optimierung" einzuarbeiten und in einem Vortrag vorzustellen;
- wissenschaftliche Diskussionen in einem bekannten Kontext zu führen.

Lernziele:

Das erfolgreiche Absolvieren von Modulen zum Zyklus "Angewandte und Mathematische Stochastik" ermöglicht es den Studierenden, eine breite Auswahl von Fragestellungen, Theorien, Modellierungs- und Beweistechniken aus der Stochastik zu verstehen und anzuwenden. Von grundlegender Wichtigkeit sind dabei stochastische Prozesse in Zeit und Raum und deren Anwendungen in der Modellierung und Statistik. Im Laufe des Zyklus werden die Studierenden sukzessive an aktuelle Forschungsthemen herangeführt und befähigt, in diesem Bereich erste eigene Beiträge zur Forschung zu leisten (z.B. im Rahmen einer Masterarbeit). Je nach aktuellem Lehrangebot unterschiedlich geordnet und gewichtet werden folgende inhaltsbezogene Ziele angestrebt: Die Studierenden

- sind mit weiterführenden Konzepten der maßtheoretisch fundierten Wahrscheinlichkeitstheorie vertraut und wenden diese selbstständig an;
- sind mit wesentlichen Begriffen und Vorgehensweisen der Wahrscheinlichkeitsmodellierung und der schließenden Statistik vertraut;
- kennen grundlegende Eigenschaften stochastischer Prozesse, sowie Bedingungen für deren Existenz und Eindeutigkeit;
- verfügen über einen Fundus von verschiedenen stochastischen Prozessen in Zeit und Raum und charakterisieren diese, grenzen sie gegeneinander ab und führen Beispiele an;
- verstehen und erkennen grundlegende Invarianzeigenschaften stochastischer Prozesse, wie Stationarität und Isotropie;
- analysieren das Konvergenzverhalten stochastischer Prozesse;
- analysieren Regularitätseigenschaften der Pfade stochastischer Prozesse;
- modellieren adäquat zeitliche und räumliche Phänomene in Natur- und Wirtschaftswissenschaften als stochastische Prozesse, gegebenenfalls mit unbekannten Parametern;
- analysieren probabilistische und statistische Modelle hinsichtlich ihres typischen Verhaltens, schätzen unbekannte Parameter und treffen Vorhersagen ihrer Pfade auf nicht beobachteten Gebieten / zu nicht beobachteten Zeiten;
- diskutieren und vergleichen verschiedene Modellierungsansätze und beurteilen die Verlässlichkeit von Parameterschätzungen und Vorhersagen kritisch.

Kompetenzen:

Nach erfolgreichem Absolvieren des Moduls sind die Studierenden in der Lage,

- sich in ein mathematisches Thema im Bereich "Angewandte und Mathematische Stochastik" einzuarbeiten und in einem Vortrag vorzustellen;
- wissenschaftliche Diskussionen in einem bekannten Kontext zu führen.

Learning outcome, core skills:	**Workload:**
Nach erfolgreichem Absolvieren des Moduls haben die Studierenden die Grundlagen und die physikalische Erscheinungen der Zusammenhalt der Ionen und Elektronen in einem Festkörper mit idealen periodischen Anordnung der konstituierenden Atomen verinnerlicht. Basierend auf der Eigenschaften freier Atomen und deren Wechselwirkung im Kristallgitter wird ein grundlegendes Verständnis verschiedener kollektiven Phänomene gewonnen. Dazu gehören beispielsweise die elektronische Bandstruktur im periodischen Gitterpotential (Dynamik der Elektronen) sowie die Gitterschwingungen (Dynamik der Ionen), die Elektrizitätsleitung - auch in niederdimensionalen Strukturen - sowie thermische Eigenschaften (spezifische Wärme).	Attendance time: 84 h Self-study time: 156 h

Course: Vorlesung und Übung Einführung in die Festkörperphysik	
Examination: Klausur (120 min.) oder mdl. Prüfung (ca. 30 min.) **Examination prerequisites:** Mindestens 50% der Hausaufgaben in den Übungen müssen bestanden worden sein. **Examination requirements:** Grundlagen, Phänomene und Modelle für Elektronen- und Gitterdynamik in Festkörpern. Insbesondere, Chemische Bindung in Festkörpern, Atomare Kristallstruktur, Streuung an periodischen Strukturen, das Elektronengas ohne Wechselwirkung (Freie Elektronen), das Elektronengas mit Wechselwirkung (Abschirmung, Plasmonen), das periodische Potential (Bandstrukturd der Kristall-Elektronen), Gitterschwingungen (Phononen) und spezifische Wärme	8 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: German	**Person responsible for module:** Prof. Dr. Angela Rizzi
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: three times	**Recommended semester:** 5 - 6
Maximum number of students: 120	

Georg-August-Universität Göttingen	4 C
Module B.Phy.1531: Introduction to Materials Physics	4 WLH

Learning outcome, core skills:	**Workload:**
This 2 week long intensive course is offered between the winter and summer semesters. It applies the knowledge obtained in the Einführung in die Festkörperphysik and Thermodynamik und statistische Physik to understanding the structure, properties and dynamic behavior of the materials we use in our everyday lives. **Learning outcomes:** crystal defects, disordered systems, impurities, crystalline mixtures and alloys, phase diagrams, phase transformations, diffusion, kinetics, materials selection, structure-property relations. **Core skills:** The students will gain an understanding of the different materials classes that we use in everyday life, including: how properties of materials are determined by their atomic scale structure, which driving forces determine the structure of equilibrium phases, and how kinetic processes control phase transformations and the dynamics of non-equilibrium processes.	Attendance time: 56 h Self-study time: 64 h

Course: Introduction to Materials Physics (Lecture)	2 WLH
Examination: Written or oral examWritten exam (120 minutes) or oral examination (approximately 30 minutes) **Examination prerequisites:** 50% of the homework problems must be solved successfully. **Examination requirements:** Crystal defects, disordered systems, impurities, crystalline mixtures and alloys, phase diagrams, phase transformations, diffusion, kinetics, materials selection.	4 C

Course: Introduction to Materials Physics (Exercise)	2 WLH

Admission requirements: none	**Recommended previous knowledge:** • Experimentelle Methoden der Materialphysik, • Einführung in die Festkörperphysik, • Thermodynamik und statistische Physik
Language: English	**Person responsible for module:** Prof.in Cynthia Volkert
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: three times	**Recommended semester:** Bachelor: 5 - 6; Master: 1
Maximum number of students: 30	

Georg-August-Universität Göttingen **Module B.Phy.1541: Introduction to Geophysics**	4 C 3 WLH

Learning outcome, core skills: Nach erfolgreichem Absolvieren des Moduls können die Studierenden mit den grundlegenden Begriffen und Modellen der Geophysik umgehen: • Treibhauseffekt • Gravimetrie • Seismologie • Elektromagnetische Tiefenforschung • Altersbestimmung • Gezeiten • Konvektion • Erdmagnetfeld • Fraktale und chaotische Prozesse • Plattentektonik	**Workload:** Attendance time: 42 h Self-study time: 78 h

Course: Vorlesung und Übung zu Einführung in die Geophysik	
Examination: Klausur (120 min.) oder mdl. Prüfung (ca. 30 min.) **Examination prerequisites:** Mindestens 50% der Hausaufgaben in den Übungen müssen bestanden worden sein. **Examination requirements:** Grundlagen der Geophysik, insbes. Plattentektonik, Erdbeben	4 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: German	**Person responsible for module:** Prof. Dr. Andreas Tilgner
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: three times	**Recommended semester:** Bachelor: 6; Master: 1 - 2
Maximum number of students: 120	

Georg-August-Universität Göttingen	8 C
Module B.Phy.1551: Introduction to Astrophysics	6 WLH

Learning outcome, core skills:	**Workload:**
After successful completion of the module students are familiar with the basic concepts of astrophysics in observation and theory. In particular, they • have gained an overview of observational techniques in astronomy • understand the basic physics of the formation, structure and evolution of stars and planets have learned about the classification and structure of normal and active galaxies • understand the basic physics of homogeneous cosmology and cosmological structure formation	Attendance time: 84 h Self-study time: 156 h

Course: Lecture and exercises for introduction to astrophysics	
Examination: oral (approx. 30 minutes) or written (120 min.) exam **Examination prerequisites:** At least 50% of the homework of the excercises have to be solved successfully. **Examination requirements:** Observational techniques, Planets and exoplanets, planet formation, stellar formation, structure and evolution, galaxies, AGN and quasars, cosmology, structure formation	8 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: English, German	**Person responsible for module:** Prof. Dr. Jens Niemeyer
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: three times	**Recommended semester:** Bachelor: 5 - 6; Master: 1
Maximum number of students: 120	

Georg-August-Universität Göttingen	6 C
Module B.Phy.1561: Introduction to Physics of Complex Systems	6 WLH

Learning outcome, core skills:	Workload:
Sound knowledge of essential methods and concepts from Nonlinear Dynamics and Complex Systems Theory, including practical skills for analysis and simulation (using, for example, the programming language python) of dynamical systems.	Attendance time: 84 h Self-study time: 96 h

Course: Introduction to Physics of Complex Systems (Lecture)	4 WLH
Examination: written examination (120 Min.) or oral examination (approx. 30 Min.) **Examination prerequisites:** At least 50% of the homework of the excercises have to be solved successfully. **Examination requirements:** • Knowledge of fundamental principles and methods of Nonlinear Physics • Modern experimental techniques and theoretical models of Complex Systems theory.	6 C

Course: Introduction to Physics of Complex Systems (Exercise)	2 WLH

Admission requirements: none	Recommended previous knowledge: Basic programming skills (for the exercises)
Language: English, German	**Person responsible for module:** Prof. Dr. Stefan Klumpp Prof. Dr. Ulrich Parlitz
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: three times	**Recommended semester:** Bachelor: 5 - 6; Master: 1 - 2
Maximum number of students: 120	

Georg-August-Universität Göttingen **Module B.Phy.1571: Introduction to Biophysics**	6 C 6 WLH

Learning outcome, core skills: After attending this course, students will have basic knowledge about - the build-up of cells and the function of the components - transport phenomena on small length scales, derivation and solution of the diffusion equation - laminar hydrodynamics and its application in biological systems (flow, swimming, motility) - reaction kinetics and cooperativity, including enzymes - non-covalent interaction forces - self-assembly - biological (lipid) membrane build-up and dynamics - biopolymer physics and cytoskeletal filaments, including filament and cell mechanics - neurobiophysics - experimental methods, including state-of-the-art microscopy	**Workload:** Attendance time: 84 h Self-study time: 96 h

Course: Introduction to Biophysics (Lecture) *Contents*: components of the cell; diffusion, Brownian motion and random walks; low Reynolds number hydrodynamics; chemical reactions, cooperativity and enzymes; biomolecular interaction forces and self-assembly; membranes; polymer physics and mechanics of the cytoskeleton; neurobiophysics; experimental methods and microscopy	4 WLH
Examination: Written exam (120 min.) or oral exam (ca. 30 min.) **Examination prerequisites:** At least 50% of the homework problems have to be solved successfully. **Examination requirements:** Knowledge of the fundamental principles, theoretical descriptions and experimental methods of biophysics.	6 C

Course: Introduction to Biophysics (Exercise)	2 WLH

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Sarah Köster
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: three times	**Recommended semester:** Bachelor: 5 - 6; Master: 1 - 2
Maximum number of students: 100	

Georg-August-Universität Göttingen **Module B.Phy.5601: Theoretical and Computational Neuroscience I**	3 C 2 WLH

Learning outcome, core skills: Nach erfolgreichem Absolvieren des Moduls sollten die Studierenden... • ein vertieftes Verständnis folgender Themen entwickelt haben: TCN I: biophysikalische Grundlagen neuronaler Anregbarkeit, mathematische Grundlagen neuronaler Anregbarkeit, Input-Output Beziehungen und Bifurkationen, Klassifizierung, Existenz, Stabilitaet und Koexistenz sychroner und asynchroner Zustaende in spikenden neuronalen Netzwerken; • Methoden und Methodenentwicklung für die Analyse hochdimensionaler Modelle ratenkodierter Einheiten in Feldmodellen verstehen; • die Handhabung von Bifurkationsszenarien und zugehörigen Instabilitäten verstanden haben.	**Workload:** Attendance time: 28 h Self-study time: 62 h

Course: Collective Dynamics Biological Neural Networks I (Lecture)	

Von den folgenden Prüfungen ist genau eine erfolgreich zu absolvieren:	
Examination: Written examination (120 minutes)	3 C
Examination: Oral examinationMündliche Prüfung (approx. 30 minutes)	3 C
Examination: Vortrag (2 Wochen Vorbereitungszeit) (30 minutes)	3 C

Examination requirements: Grundlagen der Membranbiophysi;, Bifurkationen anregbarer Systeme; Verständnis der Grundlagen der Modellierungsansätze der Neurophysik; kollektive Zustände spikender neuronaler Netzwerke; insbesondere Synchonizität; Balanced State; Phase-Locking und diesen Zuständen unterliegenden lokalen und Netzwerkeigenschaften: Netzwerktopologie; Delays; inhibitorische und exzitatorische Kopplung; sparse random networks	

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Fred Wolf
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: three times	**Recommended semester:** Bachelor: 4 - 6; Master: 1
Maximum number of students: 90	

Georg-August-Universität Göttingen	3 C
Module B.Phy.5602: Theoretical and Computational Neuroscience II	2 WLH

Learning outcome, core skills:	Workload:
Nach erfolgreichem Absolvieren des Moduls sollten Studierende... • das vertiefte Verständnis folgender Themen entwickelt haben: TCN II: Grundlagen neuronaler Anregbarkeit, Input-Output Beziehungen bei Einzelneuronen, eindimensionale Feldmodelle (Feature Selectivity, Contrastinvariance), zweidimensionale Feldmodell (Zusammenwirken von kurz- und langreichweitigen Verbindungen sowie lokaler Nichtlinearitaeten), Amplitudengleichungen und ihre Loesungen; • Methoden und Methodenentwicklung für die Analyse spikender neuronaler Netzwerke mit und ohne Delays, Handhabung von Bifurkationsszenarien und zugehörigen Instabilitäten verstehen.	**Workload:** Attendance time: 28 h Self-study time: 62 h

Course: Collective Dynamics Biological Neural Networks II (Lecture)	

Von den folgenden Prüfungen ist genau eine erfolgreich zu absolvieren:	
Examination: Written examination (120 minutes)	3 C
Examination: Oral examination (approx. 30 minutes)	3 C
Examination: Seminarvortrag (2 Wochen Vorbereitungszeit) (30 minutes)	3 C

Examination requirements:	
Ratenmodelle von Einzelneuronen; Feldansatz in der theoretischen Neurophysik; Grundlagen der Bifurkationen anregbarer System; Verständnis der Grundlagen der Modellierungsansätze der Neurophysik; Zusammenhang diskrete/kontinuierliche Modelle; kollektive Zustände ein- und zweidimensionaler Feldmodelle, insbesondere ring model of feature selectivity; orientation preference maps.	

Admission requirements: none	Recommended previous knowledge: none
Language: English	**Person responsible for module:** Prof. Dr. Fred Wolf
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: three times	**Recommended semester:** Bachelor: 4 - 6; Master: 1
Maximum number of students: 90	

Georg-August-Universität Göttingen **Module B.Phy.5605: Computational Neuroscience: Basics**	3 C 2 WLH

Learning outcome, core skills:	**Workload:**
Goals: Introduction to the different fields of Computational Neuroscience: • Models of single neurons, • Small networks, • Implementation of all simple as well as more complex numerical computations with few neurons. • Aspects of sensory signal processing (neurons as ‚filters'), • Development of topographic maps of sensory modalities (e.g. visual, auditory) in the brain, • First models of brain development, • Basics of adaptivity and learning, • Basic models of cognitive processing. **Kompetenzen/Competences:** On completion the students will have gained… • … overview over the different sub-fields of Computational Neuroscience; • … first insights and comprehension of the complexity of brain function ranging across all sub-fields; • … knowledge of the interrelations between mathematical/modelling methods and the to-be-modelled substrate (synapse, neuron, network, etc.); • … access to the different possible model level in Computational Neuroscience.	Attendance time: 28 h Self-study time: 62 h

Course: Computational Neuroscience: Basics (Lecture)	
Examination: Written examination (45 minutes) **Examination requirements:** Actual examination requirements: Having gained overview across the different sub-fields of Computational Neuroscience; Having acquired first insights into the complexity of across the whole bandwidth of brain function; Having learned the interrelations between mathematical/modelling methods and the to-be-modelled substrate (synapse, neuron, network, etc.) Being able to realize different level of modelling in Computational Neuroscience.	3 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Florentin Andreas Wörgötter
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** Bachelor: 2 - 6; Master: 1 - 4

Georg-August-Universität Göttingen	3 C
Module B.Phy.5651: Advanced Computational Neuroscience	2 WLH

Learning outcome, core skills:	**Workload:**
Participants in the course can explain and relate biological foundations and mathematical modelling of selected (neuronal) algorithms for learning and pattern formation. Based on the the algorithms' properties, they can discuss and derive possible technical applications (robots).	Attendance time: 28 h Self-study time: 62 h

Course: Advanced Computational Neuroscience I (Lecture)	

Examination: Written examination (90 Min.) or oral examination (approx. 20 Min.)
Examination requirements:
Algorithms for learning:
 	
   • Unsupervised Learning (Hebb, Differential Hebb),
   • Reinforcement Learning,
   • Supervised Learning
 	
Algorithms for pattern formation.
 	
Biological motivation and technical Application (robots).
	3 C

Admission requirements: none	**Recommended previous knowledge:** Basics Computational Neuroscience
Language: English	**Person responsible for module:** Prof. Dr. Florentin Andreas Wörgötter
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: three times	**Recommended semester:** Bachelor: 5 - 6; Master: 1 - 4
Maximum number of students: 50	

Additional notes and regulations:
Hinweis: Die B.Phy.5652 kann als vorlesungsbegleitendes Praktikum besucht werden.

Georg-August-Universität Göttingen	3 C
Module B.Phy.5652: Advanced Computational Neuroscience II	2 WLH

Learning outcome, core skills:	**Workload:**
Participants in the course can implement, test, and evaluate the properties of selected (neuronal) algorithms for learning and pattern formation.	Attendance time: 28 h Self-study time: 62 h

Course: Advanced Computational Neuroscience II	
Examination: 4 Protocols (max. 3 Pages) and Presentations (ca. 10 Min.), not graded **Examination requirements:** Algorithms for learning: • Unsupervised Learning (Hebb, Differential Hebb), • Reinforcement Learning, • Supervised Learning Algorithms for pattern formation. Biological motivation and technical Application (robots). *For each of the 4 programming assignments 1 protocol (ca. 3 pages) and 1 oral presentations (demonstration and discussion of the program, ca. 10 min).*	3 C

Admission requirements:	**Recommended previous knowledge:**
B.Phy.5651 (can be taken in parallel to B.Phy.5652)	Programming in C++, basic numerical algorithms, Grundlagen Computational Neuroscience B.Phy.5504: Computational Physics (Scientific Computing)
Language: English	**Person responsible for module:** Prof. Dr. Florentin Andreas Wörgötter
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: three times	**Recommended semester:** Bachelor: 5 - 6; Master: 1 - 4
Maximum number of students: 24	

Georg-August-Universität Göttingen **Module B.Phy.5676: Computer Vision and Robotics**	9 C 6 WLH

Learning outcome, core skills: After successful completion of this module, students are familiar with • the basic concepts of computer vision (CV), • low level hardware components and their functions, • building and programming a robot, and • computer vision and planning algorithms.	**Workload:** Attendance time: 84 h Self-study time: 186 h

Course: Introduction to Computer Vision and Robotics (Lecture) *Contents*: • PID Controller, Kalman Filter and Extended Kalman Filter, SVM, Centroid, Perceptron, Neural Networks und Deep Neural Networks, K-Means, A*, Q-Learning, Particle Filter, SLAM, Smoothing and Median Filtering, Bilateral Filtering, Non-Local Means, Connected Components, Morphological Operators, Line Detection, Circle Detection, Feature Detection, Advanced image segmentation algorithms	2 WLH
Course: Practical Course on Computer Vision and Robotics (Lecture) *Contents*: • Building a robot, solving a graph problem using the robot and executing the found solution by the robot in a real-world scenario involving perception and navigation	2 WLH
Course: Tutorial on Computer Vision and Robotics (Tutorial) *Contents*: • In the accompanying tutorial sessions students deepen and broaden their knowledge from the lectures	2 WLH
Examination: Written Exam (30 minutes, 50%) and Oral Exam (approx. 30 minutes, 50%) **Examination requirements:** Written Examination requirements: The students must be able • to repeat the contents of the lecture • to explain given problems and according solutions to typical navigation- and perception problems of robots Oral Examination requirements: The students must be able • to program control algorithms for a robot, and • to identify and understand low level hardware components as robot sensors and actuators.	9 C

Admission requirements: none	**Recommended previous knowledge:** Programming in Python
Language: English	**Person responsible for module:** Prof. Dr. Florentin Andreas Wörgötter
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**

three times	Bachelor: 5 - 6; Master: 1 - 4
Maximum number of students: 24	

Georg-August-Universität Göttingen **Module B.WIWI-OPH.0009: Law**	8 C 6 WLH

| **Learning outcome, core skills:**
Nach erfolgreichem Absolvieren des Moduls:

• haben die Studierenden grundlegende Kenntnisse des Zivilrechts und des Handelsrechts erlangt,
• haben die Studierenden gelernt, zwischen Verpflichtungsgeschäft und Verfügungsgeschäft sowie zwischen vertraglichen und deliktischen Ansprüchen zu differenzieren,
• kennen die Studierenden die wesentlichen Vertragstypen,
• kennen die Studierenden die dogmatischen Konzeptionen des Zivilrechts in ihrer systematischen, ideellen und praktischen Bedeutung,
• kennen die Studierenden die Methoden der Gesetzesauslegung (Wortlaut, systematische, historische, teleologische Auslegung) und können diese anwenden,
• können die Studierenden die Technik der Falllösung im Bereich des Zivilrechts anwenden,
• sind die Studierenden in der Lage, die erworbenen Kenntnisse bei der Lösung einschlägiger Fälle umzusetzen und sich mit den aufgeworfenen Rechtsfragen kritisch auseinanderzusetzen. | **Workload:**
Attendance time:
84 h
Self-study time:
156 h |

Course: Recht (Lecture)	4 WLH
Course: Recht (Exercise)	2 WLH
Examination: Written examination (120 minutes)	8 C

Examination requirements: Durch die Modulprüfung weisen die Studierenden nach, dass sie: • grundlegende Kenntnisse im Zivil- und Handelsrecht aufweisen, • ausgewählte Tatbestände des Zivilrechts beherrschen, • die zugehörigen methodischen Grundlagen beherrschen und • systematisch an einen zivilrechtlichen Fall herangehen und diesen in vertretbarer Weise lösen können.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: German	**Person responsible for module:** Prof. Dr. Joachim Münch
Course frequency: each semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1 - 2
Maximum number of students: not limited	

Georg-August-Universität Göttingen	3 C
Module M.Bio.141: General and applied microbiology	3 WLH

Learning outcome, core skills:	Workload:
Learning outcome: Evolution and phylogenetic system; morphology and cell biology; communities and biocoenosis of bacteria and archaea; gene expression and molecular control (transcription, translation); posttranslational control, protein stability and proteomics; genetic networks; molecular switches and signal transduction; microbial developmental biology; mechanisms of pathogenicity of important pathogens; development of new antimicrobial agents; diversity of the metabolism in bacteria and archaea as basis for biotechnological applications; industrial microbiology. **Core skills:** Knowledge of microorganisms relevant for biotechnology and medicine, ability to identify these organisms and to analyse them with molecular methods.	Attendance time: 42 h Self-study time: 48 h

Course: lecture: General and applied microbiology (Lecture)	3 WLH
Examination: Written examination (90 minutes)	3 C

Examination requirements:	
detailed knowledge in cell biology, biochemistry and genetics of procaryotic microorgansims	

Admission requirements:	Recommended previous knowledge:
can't be combined with core module M.Bio.101	none
Language: English	**Person responsible for module:** Prof. Dr. Jörg Stülke
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 10	

| Georg-August-Universität Göttingen | 3 C |
| Module M.Bio.142: Molecular genetics and microbial cell biology | 3 WLH |

| Learning outcome, core skills: | Workload: |
| Advanced knowledge of Molecular Genetics and microbial cell biology through case studies of model systems of molecular mycology (yeasts and filamentous fungi). Acquisation of knowledge up to the "Review" level in one topic. | Attendance time: 42 h Self-study time: 48 h |

| Course: Molecular genetics and microbial cell biology (Lecture) | 3 WLH |
| Examination: Written examination (90 minutes) | 3 C |

Examination requirements:
detailed knowledge in cell biology, biochemistry and genetics of eucaryotic microorgansims

Admission requirements:	Recommended previous knowledge:
Can´t be combined with core module M.Bio.102 or key competence module M.Bio.172.	• Watson, Molecular Biology of the Gene, Pearson, 7th Edition • Alberts, Molecular Biology of the Cell, Garland, 5th Edition
Language: English	Person responsible for module: Prof. Dr. Gerhard Braus
Course frequency: each winter semester	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester:
Maximum number of students: 10	

Georg-August-Universität Göttingen	3 C
Module M.Bio.144: Cellular and molecular biology of plant-microbe interactions	3 WLH

Learning outcome, core skills:	Workload:
Introduction into theory and methods for the analysis of plant-microbe interactions on the cell biological and molecular level.	Attendance time: 42 h Self-study time: 48 h

Course: lecture: Plant-microbe-interactions (Lecture)	3 WLH
Examination: Written examination (54 minutes)	3 C

Examination requirements:
knowledge of basic concepts in plant-microbe-interactions

Admission requirements:	Recommended previous knowledge:
Can´t be combined with core module M.Bio.104	none
Language: English	**Person responsible for module:** Prof. Dr. Christiane Gatz Prof. Dr. Volker Lipka
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 10	

Georg-August-Universität Göttingen	12 C
Module M.Bio.310: Systems biology	14 WLH

Learning outcome, core skills:	Workload:
Subject of this module are the formal description, modeling, analysis and simulation of complex interactions between the components (molecules, cells, organs) of living systems on different levels of abstraction.	Attendance time: 147 h
	Self-study time: 213 h
Biomolecular networks, like networks of metabolic signaling and transduction will be introduced and various graph based abstractions of interaction networks will be demonstrated (entity interaction graph, boolean networks, Petri networks). The students will get to know basics of the graph theory (analysis of paths, cluster coefficients, centrality, etc.) and they will learn how to apply the respective theory to biomolecular networks. The students will be introduced to different high-throughput techniques and their application to biomolecular networks. The simulation of molecular networks will be presented by selected examples.	

Course: Bioinformatics of systems biology (Lecture)	2 WLH
Examination: Oral examination (approx. 30 minutes)	6 C

Course: Bioinformatics of systems biology (Exercise)	2 WLH
Course: Bioinformatics of systems biology (Seminar)	1 WLH

Course: Methods course 'Modelling and analysis of biological systems'	9 WLH
3 weeks full time	
Examination: Minutes / Lab report (max. 10 pages) **Examination prerequisites:** oral presentation (ca. 30 min), regular attendance	6 C

Examination requirements:	
Ability to model, analyze and simulate biomolecular networks	

Admission requirements: can't be combined with M.Bio.340	Recommended previous knowledge: none
Language: English	**Person responsible for module:** Prof. Dr. Tim Beißbarth
Course frequency: each summer semester; verschieden; siehe Lehrveranstaltungen	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 10	

Georg-August-Universität Göttingen **Module M.Bio.323: Introduction to Bayesian Statsistics and Information Theory**	12 C 12 WLH

Learning outcome, core skills: The students learn the basic concepts and main applications of Bayesian Statistics, in particular Bayesian probabilities, parameter estimation and Bayesian credible intervals, importance and choice of prior distributions based on prior knowledge, Bayesian hypothesis testing, model tests and MCMC methods. All concepts will be presented in lectures and worked with in hands-on computer assignments. The module closes with a foray into information theory.	**Workload:** Attendance time: 195 h Self-study time: 165 h

Course: Introduction to Bayesian Inference and Information Theory (Lecture)	3 WLH
Course: Classical problems in Bayesian Interference (Seminar)	1 WLH

Course: Programmierkurs	8 WLH

Examination: Written examination (90 minutes) **Examination prerequisites:** regular attendance, oral presentation in seminar	12 C

Examination requirements: Knowledge of the foundations of Bayesian probabilities and statistics and the ability to solve simple classic problems in Bayesian Inference.	

Admission requirements: basic computer knowledge, basic experience in coding	**Recommended previous knowledge:** basics in probability calculation
Language: English	**Person responsible for module:** Prof. Dr. Michael Wibral
Course frequency: each winter semester	**Duration:**
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 10	

Georg-August-Universität Göttingen	3 C
Module M.Bio.344: Neurobiology 1 (key competence module)	2 WLH

Learning outcome, core skills:	**Workload:**
Profound knowledge of essential techniques in molecular, cellular and systemic neuroscience and their application.	Attendance time: 28 h
	Self-study time: 62 h

Course: From gene to behavior (Lecture)	2 WLH
Examination: Written examination (60 minutes)	3 C

Examination requirements:
Theoretical knowledge of the basic methods in neuroscience based on the contents of the lecture.

Admission requirements:	**Recommended previous knowledge:**
can't be combined with module M.Bio.304	none
Language:	**Person responsible for module:**
English	Prof. Dr. Martin Göpfert
Course frequency:	**Duration:**
each winter semester	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**
twice	
Maximum number of students:	
27	

Georg-August-Universität Göttingen **Module M.Bio.359: Development and plasticity of the nervous system (lecture)**	3 C 2 WLH

Learning outcome, core skills: The basics of the development and plasticity of the vertebrate nervous system are presented. Special emphasis is on the 3 following subjects: i) early development of the nervous system (induction and pattern formation, formation and survival of nerve cells, development of specific axonal projections, synaptogenesis), ii) developmental plasticity (experience- and activity-dependent development of the brain, critical periods) and iii) adult plasticity and regeneration (learning-induced plasticity, cellular mechanisms of plastic changes, neurogenesis, therapies after brain lesions). Deepened knowledge, up-to-date research results and understanding of scientific approaches in the field of the development and plasticity of the nervous system.	**Workload:** Attendance time: 28 h Self-study time: 62 h

Course: lecture: Development and plasticity of the nervous system (Lecture)	2 WLH
Examination: Oral examination (approx. 15 minutes)	3 C

Examination requirements: Profound knowledge of recent reserach and understanding of scientific methods in the field of development and plasticity of the nervous system.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Siegrid Löwel
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 35	

Georg-August-Universität Göttingen **Module M.Bio.360: Development and plasticity of the nervous system (seminar)**	3 C 2 WLH

Learning outcome, core skills: The students learn to present up-to-date publications on the development and plasticity of the nervous system and to discuss the results critically in a seminar report. Deepened knowledge, up-to-date research results and understanding of scientific approaches in the field of the development and plasticity of the nervous system. Critical discussion of up-to-date literature, scientific debate, sharpening of critical thought, promotion of multidisciplinarity. Training in presentation techniques and scientific writing.	**Workload:** Attendance time: 28 h Self-study time: 62 h

Course: seminar: Development and plasticity of the nervous system (Seminar)	2 WLH
Examination: oral presentation (~ 20 min) and essay (~ 8 pages)	3 C

Examination requirements: Profound knowledge of recent research and scientific methods in the field of development and plasticity of the nervous system.	

Admission requirements: attendance of M.Bio.359	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Siegrid Löwel
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 15	

Georg-August-Universität Göttingen **Module M.Bio.375: Neurorehabilitation Technologies: Introduction and Applications**	2 C 2 WLH

Learning outcome, core skills: Students are able to describe the state of the art in Neurorehabilitation technologies and understand the basics of the related physiological processes. They are in a position to discuss and evaluate current trends as well as to recognize limitations of available assistive and (neuro)rehabilitation technology. The programming and lab exercises will allow students to address variety of practical Neurorehabilitation challenges.	**Workload:** Attendance time: 28 h Self-study time: 32 h

Course: Introduction to Neurorehabilitation Technologies (Seminar) *Contents*: • Basic motor physiology • Biophysiological signal acquisition and processing • Invasive and non-invasive man-machine interfaces • Upper limb related technologies • Lower limb related technologies • Feedback for sensory-motor integration and rehabilitation • Selected topics on advanced technologies and their applications	1 WLH

Examination: Presentation (approx. 20 min.) and written elaboration (max. 5 pages), not graded **Examination prerequisites:** Participation and successful completion of all laboratory exercises.	3 C

Course: Neurorehabilitation Technologies (Exercise) *Contents*: • Biophysiological signal acquisition and processing • Prosthesis control • Motion analysis	1 WLH

Examination requirements: Students show that they are able to present and critically reflect scientific publications. They are familiar with the basic principles of neurorehabilitation technologies.	

Admission requirements: none	Recommended previous knowledge: basic programming skills (B.Inf.1801/1802) basic knowledge in neurophysiology (B.Bio.123; M.Bio.304)
Language: English	**Person responsible for module:** Prof. Dr. Arndt Schilling; Dr. Marko Markovic
Course frequency: each winter semester1	**Duration:**

Number of repeat examinations permitted: twice	Recommended semester:
Maximum number of students: 16	

Additional notes and regulations:
Literature suggestions will be handed out at the beginning of each term. However, the students are expected to independently perform literature research on the selected topic.

Georg-August-Universität Göttingen **Module M.DH.01: Advanced Topics in Digital Humanities**	6 C 4 WLH

Learning outcome, core skills: The students • have an overview of central methods and theories from one or more subject areas of the Digital Humanities; • are able to comprehend and discuss the scientific discussions about it; • are familiar with the complexity, heterogeneity or fuzziness of data in the humanities and the specific characteristics of the Digital Humanities; • know typical examples for the scientific categorisation of texts, persons, images and objects, ideas and processes and can relate them to each other; • can discuss, test and, if necessary, modify these approaches with regard to their applicability.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Lecture	2 WLH
Course: Seminar	2 WLH

Examination: Presentation (approx. 20 min.) with written elaboration (max. 10 pages) **Examination prerequisites:** Regular participation in the seminar **Examination requirements:** The students discuss research results of the Digital Humanities and have the ability to evaluate methods and theories and to modify them in approaches.	6 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Martin Langner
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 20	

Georg-August-Universität Göttingen	9 C
Module M.DH.10: Theories and Research Questions in Digital Language Analysis	4 WLH

Learning outcome, core skills:	Workload:
The students - know the possibilities of comprehensive digital language development and analysis; - can analyse grammatical structures of a lexical, morphological, phonetic-phonological, syntactic, semantic and discursive nature of written or spoken language using digital means and are familiar with their use in linguistic and extralinguistic contexts (pragmatics and discourse); - possess the ability to answer humanities questions from the core areas of linguistics using computer-assisted methods; - are able to digitally model the specific characteristics of language and relate these to each other as well as to the extralinguistic context.	Attendance time: 56 h Self-study time: 214 h

Course: Seminar	2 WLH
Examination: Presentation (approx. 30 min.) with written elaboration (max. 15 pages) **Examination prerequisites:** Regular participation in the seminar and digital implementation of the exercises. **Examination requirements:** Students reflect on the results of specific linguistic research and have the ability to evaluate methods and theories and to modify them in approaches. The examination is to be taken in the seminar.	9 C

Course: Exercise	2 WLH

Admission requirements: none	Recommended previous knowledge: none
Language: English	**Person responsible for module:** Prof. Dr. Caroline Sporleder
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 20	

Georg-August-Universität Göttingen	9 C
Module M.DH.11: Theories and Research Questions in Digital Text Analysis	4 WLH

Learning outcome, core skills:	Workload:
The students	Attendance time: 56 h
- know the possibilities of comprehensive digital text indexing, analysis and presentation; - have an overview of computer-assisted research questions from the whole spectrum of philological and cultural-historical disciplines, starting with the digitisation of data and the construction of suitable corpora for specific questions, through their manual and automatic preparation, to the selecting and applying appropriate methods of text analysis and the textminings as well as for the evaluation and presentation of the results; - are able to digitally acquire, analyse and model the specific characteristics of texts and text collections; - are able to evaluate the approaches used and to reflexively apply the analytical knowledge to themselves and their actions.	Self-study time: 214 h

Course: Seminar	2 WLH
Examination: Presentation (approx. 30 min.) with written elaboration (max. 15 pages)	9 C
Examination prerequisites:	
Regular participation in the seminar as well as successful digital implementation of the given exercises.	
Examination requirements:	
Students reflect on the results of specific research in textual studies and have the ability to evaluate and modify methods and theories.	
The examination is to be taken in the seminar.	

Course: Exercise	2 WLH

Admission requirements:	Recommended previous knowledge:
none	none

Georg-August-Universität Göttingen Module M.DH.16: Digital Analysis of Historical Contexts	9 C 4 WLH

Learning outcome, core skills:	Workload:
The students - can integrate pictorial works and objects into their contexts of use, the historical discourse or the modern research situation; - know possibilities of digital mediation between the "silent" artefacts and the historical or contemporary circumstances; - possess the ability to analyse the significance of historical contexts with digital methods and to discuss them in a fundamental reflection on methods; - are able to digitally model the scientific categorisations of people, images and objects, spaces, ideas or processes and relate them visually to each other; - are able to evaluate the approaches used and to reflexively apply the analytical knowledge to themselves and their actions.	Attendance time: 56 h Self-study time: 214 h

Course: Seminar	2 WLH
Examination: Presentation (approx. 30 min.) with written elaboration (max. 15 pages) **Examination prerequisites:** Regular participation in the seminar as well as successful digital implementation of the given exercises. **Examination requirements:** The students reflect on the results of specific research in image and object science on the contextuality of things and have the ability to evaluate methods and theories and to modify them in approaches. The examination is to be taken in the seminar.	9 C

Course: Exercise	2 WLH

Admission requirements: none	Recommended previous knowledge: none
Language: English	Person responsible for module: Prof. Dr. Martin Langner
Course frequency: each winter semester	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester:
Maximum number of students: 20	

Georg-August-Universität Göttingen **Module M.DH.20a: Research Project Digital Language Analysis**	12 C 2 WLH

Learning outcome, core skills: The students - are able to work on a complex research question from the field of linguistics with the help of digital technologies, e.g. to carry out a linguistic analysis of internet documents (such as tweets); - have the ability to reflect on the possibilities and limitations of the methods used in the development of a digital solution; - are able to utilise digital technologies to enhance the critical discussion on language, text and literature asking new kinds of questions about traditional research topics; - have the ability to subdivide complex tasks into subtasks and to find multifaceted solutions (in a team).	**Workload:** Attendance time: 28 h Self-study time: 332 h

Course: Project	1 WLH
Examination: Project work (max. 10 pages of project documentation) **Examination requirements:** Students create digital content that prepares, evaluates and presents the results of linguistic research. In doing so, they demonstrate that they can evaluate relevant methods and theories and modify them to some extent. The project work comprises 270 hours of self-study and concludes with a project documentation (max. 10 pages).	6 C

Course: Colloquium	1 WLH
Examination: Oral Presentation (approx. 30 minutes) **Examination requirements:** Students demonstrate that they are capable of presenting a completed project in an appropriate manner to a broader audience and explain the research question and the relevance of the topic. They are also able to discuss and defend the theses that have been put forward.	6 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Martin Langner
Course frequency: each summer semester	**Duration:** 1 Semester
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 20	

Georg-August-Universität Göttingen	9 C
Module M.DH.20b: Project Digital Language Analysis	2 WLH

Learning outcome, core skills:	**Workload:**
The students • are able to work on a research question from the field of linguistics with the help of digital technologies, e.g. to analyse language documents or to visualise historical references of reception; • have the ability to reflect on the possibilities and limitations of the methods used in the development of a digital solution; • are able to utilise digital technologies to enhance the critical discussion on language, text and literature asking new kinds of questions about traditional research topics; • have the ability to subdivide complex tasks into subtasks and to find multifaceted solutions (in a team).	Attendance time: 28 h Self-study time: 242 h

Course: Project	1 WLH
Examination: small project work (max. 5 pages of project documentation) **Examination requirements:** Students create digital content that prepares, evaluates and presents the results of linguistic research. In doing so, they demonstrate that they can evaluate relevant methods and theories and modify them to some extent. The project work comprises 180 hours of self-study and concludes with a project documentation (max. 5 pages).	6 C

Course: Colloquium	1 WLH
Examination: Oral Presentation (approx. 20 minutes) **Examination requirements:** Students demonstrate that they are capable of presenting a completed project in an appropriate manner to a broader audience and explain the research question and the relevance of the topic. They are also able to discuss and defend the theses that have been put forward.	3 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Caroline Sporleder
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 20	

Georg-August-Universität Göttingen	12 C
Module M.DH.21a: Research Project Digital Text Analysis	2 WLH

Learning outcome, core skills: The students • are able to work on a complex research question from the field of textual studies with the help of digital technologies, e.g. to develop a procedure for the digitisation of historical documents; • have the ability to reflect on the possibilities and limitations of the methods used in the development of a digital solution; • are able to utilise digital technologies to enhance the critical discussion on language, text and literature asking new kinds of questions about traditional research topics; • have the ability to subdivide complex tasks into subtasks and to find multifaceted solutions (in a team).	**Workload:** Attendance time: 28 h Self-study time: 332 h

Maximum number of students: 20	

Georg-August-Universität Göttingen **Module M.FES.111: Introduction to Ecological Modelling**	6 C 4 WLH

Learning outcome, core skills: Basic knowledge of classic and modern approaches for modelling dynamics of populations and communities. Skilled in analytical thinking, independent application of models for practical research questions, development of simple models, and critical assessment of the possibilities and limitations of different modeling approaches. Ability to develop an effective model concept.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Introduction to ecological modelling (Lecture, Exercise) *Contents*: Using examples from ecology in general and forest ecology in specific, we will cover the following modelling approaches and types: population growth (considering demographic and environmental noise, scramble and contest competition), metapopulation models, predator-prey models, forest growth models, patterns and dynamics of biodiversity, island biogeography, life tables, matrix models, individual-based models, and spatial models. We will also address how to develop a model concept. The course will consist of a mixture of lectures and hands-on work on the computer.	4 WLH
Examination: Term paper (max. 3 pages, 50%) and written examination (45 minutes, 50%)	6 C

Examination requirements: Term paper: Ability to develop an effective model concept. Written examination: Knowledge and understanding of essential characteristics of the modelling approaches covered in class. Ability to interpret model results. Knowledge of possibilities and limitations of the models.	

Admission requirements: none	Recommended previous knowledge: none
Language: English	**Person responsible for module:** Prof. Dr. Kerstin Wiegand
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:**
Maximum number of students: 20	

Georg-August-Universität Göttingen	6 C
Module M.FES.113: Soil Hydrology	4 WLH

Learning outcome, core skills:	**Workload:**
The course consists of three interconnected parts. The theoretical background (1) describes the fundamental static and dynamic principles of soil water, starting with the special physical properties of water molecules continuing with the basic static traits of soil water, e.g. water content and the energy state. The latter is important for the understanding and calculation of soil water flow under saturated and unsaturated conditions. The water balance of the soils will be completed by the potential sinks of soil water in ecosystems, like e.g. drainage, evaporation, root water uptake, and transpiration. The theoretical lectures will be accompanied by experimental exercises (2): lab measurements of bulk density, water content, water potential, conductivity, pF-curve are important parameters describing the state of soil water. Additionally, automated soil lysimeters with or without plants will be provided to the students for self-initiated experiments. The self-measured hydrological and meteorological time series data are the basis for the third part (3), the modelling of soil water cycles. Based on the learned experimental and theoretical skills, the basic principles of soil water modelling are explained and practiced.	Attendance time: 56 h Self-study time: 124 h

Course: **Soil Hydrology** (Lecture, Exercise, Practical course)	4 WLH
Examination: Term Paper (max. 20 pages)	6 C

Examination requirements:	
Theoretical and experimental skills of soil hydrology	

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Dr. Martin Jansen
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:**
Maximum number of students: not limited	

Georg-August-Universität Göttingen	6 C
Module M.FES.114: Ecosystem - Atmosphere Processes	4 WLH

Learning outcome, core skills:	Workload:
Unterstanding the carbon and water cycle of terrestrial ecosystems requires a solid understanding of biogeophysical and biogeochemical processes at the ecosystem – atmosphere interface. These processes are directly affected by human induced alterations of the climate system such as climate change and land use.	**Workload:** Attendance time: 56 h Self-study time: 124 h
In this course, the students will learn about ecosystem – atmosphere processes based on real datasets from forests and other terrestrial ecosystems. The student will be exposed to a quantitative analysis of the data and will gain basic insights into land surface modelling considering land use as well as climate change.	

Course: Ecosystem – Atmosphere Processes (Lecture, Seminar)	2 WLH
Course: Ecosystem – Atmosphere Processes (Exercise)	2 WLH
Examination: Written examination (90 minutes)	6 C

Examination requirements:	
The student will learn about biogeophysical and biogeochemical processes at the ecosystem – atmosphere interface. They will have the ability to formulate these processes in the programming language R and describe them quantitatively.	

Admission requirements: none	Recommended previous knowledge: none
Language: English	**Person responsible for module:** Prof. Dr. Alexander Knohl
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:**
Maximum number of students: not limited	

Georg-August-Universität Göttingen **Module M.FES.115: Statistical Data Analysis with R**	6 C 4 WLH

Learning outcome, core skills: Introduction to R as programming language for beginners, statistical data analysis including explorative data analysis, plotting, basic tests (t, F, non-parametric), ANOVA, simple linear regression, multiple regression, analysis of residuals, ANCOVA, non-linear regression, glms with focus on logistic regression, short introduction to tidyverse and ggplot; always including introduction to theory and to practical implementation in R.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Statistical data analysis with R (Lecture, Exercise)	4 WLH
Examination: Written examination (120 minutes)	6 C

Examination requirements:	
• Import data into a statistics software and perform an explorative data analysis • Display data graphically • Select appropriate statistical approaches or models for data analysis • Discuss the advantages and disadvantages of statistical approaches or models • Apply statistical approaches or models to given data • Explain and test assumptions of statistical approaches or models • Interpret the results of the data analysis • Suggest meaningful follow-up analyses	

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Dr. Katrin Mareike Meyer
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:**
Maximum number of students: 30	

Additional notes and regulations: 30 students are only possible if a corresponding number of computers is available

Georg-August-Universität Göttingen	6 C
Module M.FES.121: Advanced Data Analysis with R	4 WLH

Learning outcome, core skills:	Workload:
Advanced data analysis skills with program R. Topics of this module include data management and organization, working with spatio(temporal) data, visualization of data, and applying appropriate statistical modeling techniques. Modeling starts with a thorough review of the linear model. Subsequently situations where assumptions of the linear model are violated are shown and potential solutions are discussed.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Advanced data analysis with R (Exercise)	2 WLH
Course: Advanced data analysis with R (Lecture)	2 WLH
Examination: Written examination (120 minutes)	6 C

Examination requirements:
- Handle and organizing data sets (merging data from multiple sources, perform subsets and filter operations, calculate new variables)
- Work with spatial data (vector and raster), perform basic operations.
- Visualize data, choose appropriate models, validation and interpretation of models, and state potential caveats of models used.

Admission requirements:	Recommended previous knowledge:
M.Forest.1115: Statistcal Data Analysisi with R	none
Language: English	**Person responsible for module:** Dr. Johannes Signer
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:**
Maximum number of students: 30	

Georg-August-Universität Göttingen **Module M.FES.122: Ecological Simulation Modelling**	6 C 4 WLH

Learning outcome, core skills:	Workload:
• Knowledge of the modelling techniques covered; • Ability to find a suitable modeling technique for a given problem in the area of ecology and to apply it independently; • Knowledge of the current state of research in ecological modelling; • Critical appreciation and discussion of research results; • Refined presentation techniques; • Knowledge of constructive feedback techniques.	Attendance time: 56 h Self-study time: 124 h

Course: Simulation modelling (Lecture, Exercise)	3 WLH
Course: Current Topics in Ecological Modelling (Seminar)	1 WLH
Examination: Term paper (max. 10 pages, 75%) and presentation (approx. 20 minutes) with written outline (25%)	6 C

Examination requirements:	
• Know, explain, apply, analyse and assess model types that are applied in ecology • Know, explain, apply, analyse and assess the stages of model development along the modeling cycle • Understand and summarize published model studies and point out and discuss their possibilities and limitations • Moderate presentations and discussions	

Admission requirements: none	Recommended previous knowledge: none
Language: English	Person responsible for module: Prof. Dr. Kerstin Wiegand
Course frequency: each summer semester	Duration: 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	Recommended semester:
Maximum number of students: 20	

Additional notes and regulations:
20 students are only possible if a corresponding number of computers is available.
Module is also applicable for other study programs, such as MSc "Biological Diversity and Ecology", MSc "Agriculture" (specialization Ressourcenmanagement).

Georg-August-Universität Göttingen	6 C
Module M.FES.123: Functional-Structural Plant Models	4 WLH

Learning outcome, core skills:	**Workload:**
Basic knowledge and understanding of ecophysiological foundations for FSPM (functional-structural plant models) and of the corresponding frameworks from computer science (formal grammars, rule-based programming paradigm, software tools); assessment of the possibilities and limits of FSPMs; ability to analyse an FSPM and to parameterize it based on one's own data; acquaintance with methods of simulation and visualization.	Attendance time: 56 h Self-study time: 124 h

Course: Functional-Structural Plant Models (Lecture, Exercise)	4 WLH
Contents: Overview about FSPMs; Lindenmayer systems, graph grammars and basic features of rule-based modelling and programming, e.g. in the language XL; software tools for FSPMs (e.g., the platform GroIMP – partially supported by eLearning units); basic knowledge about physiological processes, e.g., photosynthesis; approaches for modelling plant architecture, processes and the linkage of structure and function in plants; basics about data acquisition of morphological and physiological traits of woody plants; digital representation of measured branching systems and of selected processes; analysis, parameterization, modification and evaluation of an existing FSPM. *Form:* Lectures and exercises (weekly) and practical work (measurement campaign: block course).	

Examination: Term Paper (max. 20 pages)	6 C

Examination requirements:	
To show basic knowledge and understanding of ecophysiological foundations for FSPM (functional-structural plant models) and of the corresponding frameworks from computer science (formal grammars, rule-based programming paradigm, software tools); assessment of the possibilities and limits of FSPMs; ability to analyse an FSPM and to parameterize it based on one's own data; acquaintance with methods of simulation and visualization.	

Admission requirements:	**Recommended previous knowledge:**
none	none
Language: English	**Person responsible for module:** Prof. Dr. Winfried Kurth
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:**
Maximum number of students: not limited	

Georg-August-Universität Göttingen	12 C
Module M.FES.131: Project: Ecosystem Analysis and Modelling	2 WLH

Learning outcome, core skills:	Workload:
Usage of GIS and/or other software tools and modelling techniques to work on an interdisciplinary topic; autonomous acquisition of know-how and competencies for scientific problem solving; ability to interdisciplinary, strategic thinking; team work and organisation of tasks, scientific presentation and discussion; writing a final report in the style of a scientific article.	Attendance time: 28 h Self-study time: 332 h

Course: Project: Ecosystem Analysis and Modelling	2 WLH
Contents: Each topic will be proposed by a researcher from the Faculty of Forest Sciences and Forest Ecology who will then be the principal supervisor for this topic. To ensure the interdisciplinary character of the project, a second supervisor should come from a department different from that of the principal supervisor. A topic can be worked upon by a single student or (preferentially) by a team of two or three students. In the case of teamwork, the final report must contain sections which can be attributed to one individual author.	
Examination: Presentation (approx. 20 minutes, 33 %) and term paper (max. 15 pages, 67%)	12 C

Examination requirements:	
Ability to use GIS and/or other software tools and modelling techniques to work on an interdisciplinary topic; autonomous acquisition of know-how and competencies for scientific problem solving; ability to interdisciplinary, strategic thinking; team work and organisation of tasks, scientific (oral) presentation and discussion; writing a final report in the style of a scientific article.	

Admission requirements: none	Recommended previous knowledge: none
Language: English	**Person responsible for module:** Prof. Dr. Winfried Kurth
Course frequency: each semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:**
Maximum number of students: not limited	

Additional notes and regulations:
Will be coordinated by W. Kurth in the winter semester and by M. Jansen in the summer term.

Georg-August-Universität Göttingen **Module M.FES.726: Ecological Modelling with C++**	6 C 4 WLH

Learning outcome, core skills: • Implementing ecological questions in model structures • Independently develop simulation models • Programming with C++ • Proficiency in the use of software dedicated to programming C++ • Commenting and documenting program code	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Ecological modelling with C++ (Lecture, Exercise) *Contents*: The module conveys advanced knowledge of modelling ecological questions. The focus is on the implementation of ecological models with the programming language C++. The module covers the fundamentals of C++ to the degree necessary for the implementation of models. Programming skills are applied in an independent modelling project implementing an own model question. The modelling project is documented in the term paper.	4 WLH
Examination: Term Paper (max. 20 pages)	6 C

Examination requirements: Develop ecological questions and translate them into model structures; Read and understand C++; implement model independently.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Kerstin Wiegand
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:**
Maximum number of students: 14	

Georg-August-Universität Göttingen **Module M.Forst.221: Remote Sensing and GIS**	6 C 4 WLH

Learning outcome, core skills: Ziel der Veranstaltungen dieses Moduls ist es, den Studierenden einen umfassenden Einblick in die wesentlichen Arbeitsabläufe der fernerkundlichen digitalen Bildverarbeitung und -analyse zu geben. Die Veranstaltung ist in die aufeinander abgestimmten Teilmodule "Geografische Informationssysteme" und „Fernerkundung" gegliedert. Beide Teile ermöglichen eine Erweiterung der im Bachelorstudium erworbenen, grundlegenden Kenntnisse. In praxisorientierten Kleinprojekten sollen die Studierenden Grundkenntnisse der Vektor- und Rasterdatenverarbeitung in Theorie und praktischer Anwendung kennenlernen und in einem GIS umsetzen. Die Studierenden sollen sich nach den Lehrveranstaltungen auf Basis der erworbenen Grundkenntnisse selbstständig spezielle Verarbeitungsfunktionen erschließen können und sollen auch die Möglichkeiten der Automatisierung von Geodaten-Verarbeitungsprozessen kennen. Die Lehrveranstaltungen versetzen die Studierenden in die Lage, selbstständig Projekte auf raumbezogener Datenbasis, ausgehend von der fernerkundlichen Informationsextraktion aus digitalen Bilddaten bis zur Analyse der generierten Geoobjekte, zu bearbeiten. Die Studierenden sollen befähigt werden, analytisch raumbezogene Fragestellungen zu lösen, Arbeitsprozesse zu strukturieren und zu gestalten sowie dafür im Team zu arbeiten und kooperativ zu agieren. Die in Vorlesungen und Übungen vermittelten Kenntnisse orientieren sich an den aktuellen Anforderungen raumbezogener interdisziplinärer Forschungsprojekte.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Geografische Informationssysteme (Lecture, Exercise) *Contents*: Grundlagen der Vektor- und insbesondere Rasterdatenverarbeitung, Installation eines konkreten GIS, Benutzungsoberfläche, Hinzufügen von Layern, Transformation von Koordinatensystemen, Projektdateien, Geodatenformate, Geo-Datenbanken, Karten-Webdienste, Erstellung von Drucklayouts; Erstellung von Vektordaten, Verarbeitungsfunktionen für Vektordaten; Rasterdaten symbolisieren, Verarbeitungsfunktionen für Rasterdaten, Automatisierung von Verarbeitungsprozessen.	2 WLH
Examination: Written examination (60 minutes)	3 C

Course: Fernerkundung (Lecture, Exercise) *Contents*: Prinzipien der digitalen Bildverarbeitung, Prinzipien der geometrischen und radiometrischen Bildkorrektur, Evaluation der Bildqualität auf Basis von Bildstatistiken, Prinzipien der Bildverbesserung, Vorstellung aktueller Sensoren und Plattformen zur Erdbeobachtung, Verwendung von überwachten und unüberwachte Klassifikationsverfahren zur Erstellung thematischer Karten, Genauigkeitsanalyse thematischer Karte, Analyse von 3D Punktwolken, multi-temporale Bildanalyse.	2 WLH
Examination: Written examination (60 minutes)	3 C

Examination requirements: **Geografische Informationssysteme:**	

Theorie der Vektor- und Rasterdatenmodelle und -verarbeitung, Kenntnis der Benutzungsoberfläche eines konkreten GIS und wichtiger Funktionalitäten wie Hinzufügen von Layern, Transformation von Koordinatenreferenzsystemen, Kenntnis verschiedener Geodatenformate, Geodatenbanken und Karten-Webdienste (insbes. WMS), Erstellung von Karten(-layouts). Fähigkeit zur Lösung raumbezogener Problemstellung unter Einsatz von Vektor- und Rasterdatenverarbeitungsfunktionen.

Fernerkundung:

- Grundlagen elektromagnetischer Strahlung und deren Interaktion mit der Atmosphäre und mit Landbedeckungsformen,
- Grundlegende Techniken der Fernerkundungsbildvorbereitung, -bearbeitung, -verbesserung und -klassifikation, wie in den Übungen behandelt,
- Anwendung der Software, die in den Übungen verwendet wird,
- Beurteilung der Qualität von Fernerkundungs-Bildprodukten, einschließlich Genauigkeitsanalyse.

Admission requirements:	Recommended previous knowledge:
none	Erforderlich sind Kenntnisse in der Kartografie, der Fernerkundung, deskriptiven Statistik und einfachen Stichprobenstatistik sowie GIS-Grundkenntnisse (entsprechend den üblichen Lehrveranstaltungen in Bachelorstudiengängen).
Language: German	**Person responsible for module:** Prof. Dr. Winfried Kurth
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:**
Maximum number of students: 40	

Georg-August-Universität Göttingen **Module M.Forst.765: Basics of Population Genetics**	6 C 4 WLH

Learning outcome, core skills: Kenntnisse in der Interpretation populationsgenetischer Prozesse.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Paarungssysteme (Lecture, Seminar) *Contents*: Im ersten Teil werden zunächst grundlegende Begriffe und Konzepte (Population, Fitness) behandelt sowie Paarungssysteme allgemein beschrieben und charakterisiert (Paarungsreferenzen, Paarungspräferenzen, Paarungsnorm). Es folgt dann die analytische Behandlung spezieller Paarungssysteme (Zufallspaarung, assortative Paarung, Inkompatibilitäten, Inzuchtsysteme usw.) mit den sich daraus ergebenden Veränderungen genetischer Strukturen.	2 WLH
Course: Selektionstheorie (Lecture, Seminar) *Contents*: Aufbauend auf dem ersten Teil der Populationsgenetik (Paarungssysteme) werden in diesem Semester die Auswirkungen von Selektion auf die Entwicklung genetischer Strukturen, insbesondere die Etablierung und Erhaltung genetischer Polymorphismen und auch die Entwicklung der Populationsfitness behandelt (Selektion und Paarungssystem, Formen der Selektion, Berechnung von Fitnesswerten, Selektion mit konstanten, häufigkeitsabhängigen bzw, dichteabhängigen genotypischen Fitnesswerten).	2 WLH
Examination: Term Paper (max. 20 pages)	6 C

Examination requirements: Kenntnisse populationsgenetischer Prozesse	

Admission requirements: none	**Recommended previous knowledge:** none
Language: German	**Person responsible for module:** Prof. Dr. Martin Ziehe
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:**
Maximum number of students: not limited	

Georg-August-Universität Göttingen **Module M.Forst.778: Variation Measurements in Biology and Specifically in Genetics**	6 C 4 WLH

Learning outcome, core skills: Vertrautheit mit Methoden der Quantifizierung von Eigenschaften biologischer und speziell genetischer Variation.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Das Ausmaß von Variation (Lecture, Seminar) *Contents*: Es werden die Möglichkeiten dargestellt, das Ausmaß von Variation quantitativ zu erfassen und zu beschreiben. Dazu gehört auch die Behandlung entsprechender Konzepte (wie etwa für die Diversität oder Differenzierung). Die hier demonstrierten Anwendungen beziehen sich zwar zum Teil ganz allgemein auf Variation (wie sie auch in der Ökologie zu finden sind), verstärkt aber auf solche speziell aus dem Bereich der Genetik.	2 WLH
Course: Räumliche und andere Aspekte der Variation (Lecture, Seminar) *Contents*: In diesem Semester steht zunächst die Beschreibung der räumlichen Organisation und Verteilung von Variation (räumliche Charakterisierungen mit Ripley`s K, räumliche Autokorrelationen mit Moran`s I usw.) im Vordergrund. Anschließend werden weitere ausgewählte Themen behandelt, deren Auswahl sich auch an den speziellen Interessen der Zuhörer orientieren kann.	2 WLH
Examination: Hausarbeit (max. 20 Seiten)	6 C

Examination requirements: Kenntisse über: • Methoden der Quantifizierung von Eigenschaften biologischer Variation • Methoden der Quantifizierung von Eigenschaften genetischer Variation	

Admission requirements: none	**Recommended previous knowledge:** none
Language: German	**Person responsible for module:** Prof. Dr. Martin Ziehe
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:**
Maximum number of students: not limited	

Georg-August-Universität Göttingen **Module M.Geg.02: Resource Utilisation Problems**	6 C 4 WLH

Learning outcome, core skills: Die Studierenden können die Bedeutung der Ressourcen Boden und Wasser als Bestandteile von Ökosystemen und Lebensgrundlage des Menschen aufzeigen und das globale sowie regional differenzierte Ausmaß der Gefährdung und Degradation dieser Ressourcen benennen. Sie sind in der Lage, das DPSIR-Konzept, durch das die Beziehungen Drivers – Pressures – State – Impacts – Responses verdeutlicht werden können, auf verschiedene Ressourcennutzungsprobleme anzuwenden. Sie kennen die Reference Soil Groups der World Reference Base for Soil Resources, sowie die spezifischen Bodeneigenschaften und daraus resultierenden Nutzungsmöglichkeiten, –einschränkungen und Gefährdungen der verschiedenen Böden. **Modulinhalte:** Eigenschaften, Nutzungsmöglichkeiten und –probleme verschiedener Böden (mit Schwerpunkt auf feuchte Tropen und Subtropen sowie Trockengebiete), Boden-gefährdungen, Faktoren und Prozesse der Bodendegradation, Ursachen, Ausmaß und Arten der Bodendegradation in Europa, Desertifikation, regional differenzierte Auswirkungen des Klimawandels auf die Ressourcen Boden und Wasser, globale Verteilung von Wasserangebot und –nachfrage, Wasserverbrauch nach Sektoren, Wassermangel, Ursachen und Ausmaß von Problemen mangelnder Wasserqualität, regionale Unterschiede in der Versorgung mit sanitären Anlagen und sauberem Trinkwasser.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Ressourcennutzungsprobleme (Lecture)	2 WLH
Course: Ressourcennutzungsprobleme (Seminar) Inkl. Geländetage zur Bearbeitung einer Fragestellung im Rahmen eines kleinen Projekts.	2 WLH
Examination: Written examination (90 minutes) **Examination prerequisites:** Regelmäßige Teilnahme am Seminar; Referat mit schriftl. Ausarbeitung bzw. schriftlichem Beitrag zum Projektbericht oder Poster (ca. 30 Min., max. 20 S. bzw. 1 DIN A 0 Poster) **Examination requirements:** Die Studierenden erbringen den Nachweis, dass sie Probleme der Boden- und Wassernutzung überblicken und spezifische Degradationsursachen sowie -prozesse verstehen. Sie zeigen, dass sie geeignete situationsbezogene Verfahren des nachhaltigen Umgangs mit Böden und Wasser kennen. Die Erstellung des Beitrags zum Projektbericht oder die Postererstellung als Prüfungsvorleistung machen die Mitwirkung bei der Projektbearbeitung erforderlich.	6 C

Admission requirements: none	**Recommended previous knowledge:** Grundlagen der Bodengeographie

Language:	Person responsible for module:
German	Prof. Dr. Daniela Sauer
Course frequency:	**Duration:**
each summer semester	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**
twice	from 2
Maximum number of students:	
42	

Georg-August-Universität Göttingen **Module M.Geg.03: Global Change / Land Use Change**	6 C 4 WLH

Learning outcome, core skills: Die Studierenden verfügen über ein Überblickswissen zur Forschung über Klimawandel und Global Change. Die Studierenden sind in der Lage: • Veränderungen der Umwelt unter dem Einfluss des Menschen zu analysieren, • typische Syndrome und Syndromkomplexe zu erkennen und zu verstehen, • Global Change als zentrales Thema der Geographie an der Schnittstelle von Natur- und Gesellschaftswissenschaften zu erkennen, • Adaptation- und Mitigation-Ansätze zu bewerten. **Modulinhalte der Vorlesung:** Das Modul bearbeitet in der Vorlesung folgende Themen: • Basiswissen Klimawandel – Summary des IPCC AR5-Report der WGI • Basiswissen Klimawandel in Deutschland • Zivilisationsdynamik der Menschheit • Industrielle Revolution und ihre anhaltende Raumwirksamkeit • Kippelemente mit direkter und indirekter Wirkung auf die zukünftige Menschheitsentwicklung • Bevölkerungsentwicklung und Ernährungssicherung • Global und regionale Wasserressourcen • Globaler Umweltwandel und Gesundheit der Menschheit (Global Health - One Health Ansatz) • Globale Umweltsyndrome • Energieversorgung der Menschheit - Transformation der Energiesysteme **Modulinhalte des Seminars:** Das Seminar nimmt aktuelle Themen des Globalen Umweltwandels auf wie z.B. Themen der Energiewende in Deutschland, das Erneuerbare-Energien-Gesetz (EEG), Landnutzungswandel, Anpassung der Pflanzenproduktion an den Klimawandel, Bevölkerungswandel und Konsumentenwandel etc.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Globaler Umweltwandel (Global Change) (Lecture)	2 WLH
Course: Spezielle Fallbeispiele des Globalen Umweltwandels (Seminar)	2 WLH
Examination: Written examination (90 minutes) **Examination prerequisites:** Regelmäßige Teilnahme am Seminar; Referat mit schriftl. Ausarbeitung (ca. 30 Min., max. 20 S.) oder Projektbericht (max. 20 S.) und Projektpräsentation (ca. 30 Min.)	6 C

Examination requirements: Die Studierenden erbringen den Nachweis, dass sie das Grundlagenwissen im Bereich des globalen Klima- und Umweltwandels beherrschen und den Forschungsstand zu Klimawandel und Global Change überblicken. Ferner erbringen sie den Nachweis,	

dass sie die Veränderungen der Umwelt unter anthropogenen Einfluss analysieren, typische Syndrome und Syndromkomplexe erkennen und verstehen sowie Adaptions- und Mitigationsansätze bewerten können.

Admission requirements: none	**Recommended previous knowledge:** none
Language: German	**Person responsible for module:** Prof. Dr. Martin Kappas
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 40	

Georg-August-Universität Göttingen **Module M.Geg.04: Global Sociocultural and Economic Change**	6 C 4 WLH

Learning outcome, core skills:	**Workload:**
Die Studierenden kennen die globalen Zusammenhänge des soziokulturellen und wirtschaftlichen Wandels. Sie verstehen Ursachen und Wirkungen der Veränderungsprozesse auf unterschiedlichen Maßstabsebenen aus der Perspektive der Bevölkerungs-, Siedlungs- und Wirtschaftsgeographie. Sie kennen den theoriegeleiteten kritischen Umgang mit aktuellen gesellschaftlichen, humanökologischen sowie politisch-ökologischen Fragestellungen. Die Studierenden sind in der Lage, Diskurse zu Bevölkerungsentwicklung und Ressourcenverknappung, Urbanisierung und Fragmentierung, Armutsentwicklung und räumliche Disparitäten sowie Regionalentwicklungen anhand von Fallbeispielen zu verstehen. **Modulinhalte:** Die Prozesse der Globalisierung werden anhand von Indikatoren und Akteuren für unterschiedliche Maßstabsebenen erläutert. Der Wandel wirtschaftlicher Märkte wird anhand von Theorien diskutiert und aktuelle Auswirkungen anhand von Regionen (z.B. Globaler Süden, Schwellenländer, Stadt-Land) reflektiert. Die gesellschaftlichen/ kulturellen Dimensionen des Wandels werden theoriegeleitet diskutiert. Die Folgen der ökonomischen und soziokulturellen Globalisierungsprozesse werden anhand von „Global Governance"-Architekturen sowie politischen Steuerungs- und Regulationsmechanismen kritisch beleuchtet.	Attendance time: 56 h Self-study time: 124 h

Course: Globaler soziokultureller und ökonomischer Wandel (Lecture)	2 WLH
Course: Globaler soziokultureller und ökonomischer Wandel (Exercise)	2 WLH

Examination: Referat mit schriftl. Ausarbeitung (ca. 30 Min., max. 20 S.) **Examination prerequisites:** Regelmäßige Teilnahme an der Übung	6 C

Examination requirements:	
Die Studierenden erbringen den Nachweis, dass sie den theoriegeleiteten kritischen Umgang mit aktuellen gesellschaftlichen, humanökologischen sowie politisch-ökologischen Fragestellungen kennen und Diskurse zu Bevölkerungsentwicklung und Ressourcenverknappung, Urbanisierung und Fragmentierung, Armutsentwicklung und räumlichen Disparitäten sowie Regionalentwicklungen verstehen und einordnen können. Ferner erbringen sie den Nachweis, dass sie die globalen Zusammenhänge des soziokulturellen und wirtschaftlichen Wandels sowie Ursachen und Wirkungen der Veränderungsprozesse auf unterschiedlichen Maßstabsebenen aus der Perspektive der Bevölkerungs-, Siedlungs- und Wirtschaftsgeographie verstehen.	

Admission requirements:	**Recommended previous knowledge:**
none	none
Language:	**Person responsible for module:**

40	

Georg-August-Universität Göttingen **Module M.Geg.05: GIS and Remote Sensing / Geographic Information Systems and Environmental Monitoring**	5 C 3 WLH

Learning outcome, core skills: Die Studierenden kennen die theoretischen und praktischen Grundlagen des Einsatzes von GIS/Fernerkundung für die Modellierung von Faktoren und der raum-zeitlichen Dynamik der Landoberfläche. Die Studierenden sind in der Lage: • grundlegende flächenhafte Informationsebenen (Indikatoren) in GIS zu erstellen bzw. aus Fernerkundungsdaten abzuleiten, • GIS-gestützte Modelle zur Umweltmodellierung anzuwenden, • selbständig GIS- und Fernerkundungsmethoden für angewandte Fragestellungen anzuwenden, • Grundlagen der Geostatistik zur Ressourcenanalyse und Umweltbewertung anzuwenden.	**Workload:** Attendance time: 42 h Self-study time: 108 h

Course: GIS und Fernerkundung in der Ressourcenanalyse und -bewertung (Lecture)	1 WLH
Course: Übung mit Praktikum: GIS und Fernerkundung oder GIS und Umweltmonitoring (Exercise)	2 WLH
Examination: Projektarbeitsbericht (max. 15 pages) **Examination prerequisites:** Regelmäßige Teilnahme an der Übung	5 C

Examination requirements: Die Studierenden erbringen den Nachweis, dass sie für die Modellierung von Faktoren und der raum-zeitlichen Dynamik der Landoberfläche die theoretischen und praktischen Grundlagen des Einsatzes von GIS/Fernerkundung kennen, grundlegende flächenhafte Indikatoren in GIS erstellen bzw. aus Fernerkundungsdaten ableiten und GIS-Modelle zur Umweltmodellierung sowie die Geostatistik zur Ressourcenanalyse und Umweltbewertung anwenden können.	

Admission requirements: none	Recommended previous knowledge: none
Language: German	**Person responsible for module:** Prof. Dr. Martin Kappas
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 25	

Georg-August-Universität Göttingen **Module M.Geg.06: Quaternary Climate and Landscape Development**	5 C 3 WLH

Learning outcome, core skills: Die Studierenden kennen die Grundzüge der quartären Klima- und Landschaftsentwicklung Mittel- und Südeuropas. Sie verstehen die Wirkungsweisen verschiedener Steuergrößen auf die Klima- und Landschaftsentwicklung. Die Studierenden haben einen Überblick über Archive der Landschaftsentwicklung und darin enthaltene Proxies, die zur Rekonstruktion der Klima- und Landschaftsgeschichte herangezogen werden können. Sie sind mit den wichtigsten in der Quartärforschung zum Einsatz kommenden Untersuchungsmethoden und Datierungsverfahren vertraut.	**Workload:** Attendance time: 42 h Self-study time: 108 h

Course: Landschaftsentwicklung (Lecture)	1 WLH
Course: Archive und Proxies zur Rekonstruktion der Landschaftsentwicklung (Seminar)	2 WLH
Examination: Referat (ca. 30 Min.) mit schriftlicher Ausarbeitung (max. 20 S.) **Examination prerequisites:** Regelmäßige Teilnahme am Seminar	5 C

Examination requirements: Die Studierenden erbringen den Nachweis, dass sie die Bedeutung von Archiven und Proxies im Kontext der Rekonstruktion der Landschaftsentwicklung verstanden haben und dass sie in der Lage sind, unter Einbindung entsprechender Primärliteratur auch mit unterschiedlichen Definitionen wissenschaftlich adäquat umzugehen. Anhand eines selbst gewählten Archivs und ein bis zwei selbst gewählten Proxies aus diesem Archiv erbringen sie weiterhin den Nachweis, dass sie in der Lage sind, anhand geeigneter Primärliteratur Stärken und Schwächen von Archiven und Proxies herauszuarbeiten und kritisch zu reflektieren.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: German	**Person responsible for module:** Prof. Dr. Daniela Sauer
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** from 1
Maximum number of students: 40	

Georg-August-Universität Göttingen **Module M.Geg.07: Perception, Evaluation and Management of Resources**	5 C 3 WLH

Learning outcome, core skills: Die Studierenden sind befähigt, die Umgehensweise mit natürlichen Ressourcen in einen gesellschaftlichen Kontext zu stellen und unterschiedliche Interessen und Bewertungen der Akteure zu verstehen. Sie erlernen anhand des Paradigmenwechsels im Umgang mit Ressourcen, dass auf verschiedenen Maßstabsebenen kulturelle, soziale, wirtschaftliche, und politischer Rahmenbedingungen konstruiert sind. Die nationalen, regionalen und lokalen Handlungsspielräume für die Ressourcenwahrnehmung und –bewertung werden durch sie bestimmt. Die Studierenden können Nutzungskonflikte sowie Steuerungsinstrumente (z.B. Schutz- und Nutzungskonzepte) des Ressourcenmanagements aus globaler bis lokaler Perspektive bewerten und eine Analyse von Hemmnissen und Chancen für eine nachhaltige Regionalentwicklung anhand von Fallbeispielen durchführen.	**Workload:** Attendance time: 42 h Self-study time: 108 h

Course: Ressourcenwahrnehmung, -bewertung und -management (Lecture)	1 WLH
Course: Ressourcenwahrnehmung, -bewertung und -management (Seminar)	2 WLH
Examination: Referat mit schriftl. Ausarbeitung (ca. 30 Min., max. 25 S.) oder Literatur-Kurzreview (max. 15 S.) **Examination prerequisites:** Regelmäßige Teilnahme am Seminar	5 C

Examination requirements: Die Studierenden erbringen den Nachweis, dass sie den Umgang mit natürlichen Ressourcen in einen gesellschaftlichen Kontext stellen und unterschiedliche Interessen und Bewertungen der Akteure verstehen können. Ferner erbringen sie den Nachweis, dass sie im Wissen um die Konstruktion soziokultureller, politischer und wirtschaftlicher Rahmenbedingungen Nutzungskonflikte sowie Schutzkonzepte des Ressourcenmanagements aus globaler bis lokaler Perspektive bewerten und eine Analyse von Hemmnissen und Chancen für eine nachhaltige Regionalentwicklung anhand von Fallbeispielen durchführen können.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: German	**Person responsible for module:** Prof. Dr. Heiko Faust

Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 30	

Georg-August-Universität Göttingen **Module M.Inf.1114: Algorithms on Sequences**	5 C 4 WLH

Learning outcome, core skills: We expect that the participants will gain an understanding of classical string-processing tools. They are supposed to understand and be able to use in various situations: classical text algorithms (e.g., pattern matching algorithms, edit distance), classical text indexing data structures (e.g., suffix arrays / trees), and classical combinatorial results that are useful in this context (e.g., periodicity lemmas).	**Workload:** Attendance time: 56 h Self-study time: 94 h

Course: Algorithms on Sequences (Lecture, Exercise) *Contents*: This course is an introduction into the theory of stringology, or algorithms on sequences of symbols (also called words or strings). Our main intention is to present a series of basic algorithmic and combinatorial results, which can be used to develop efficient word-processing tools. While the emphasis of the course is on the theoretical side of stringology, we also present a series of applications of the presented concepts in areas like data-compression or computational biology The main topics our course will cover are: basic combinatorics on words, pattern matching algorithms, data structures for text indexing (suffix arrays, suffix trees), text compression (Huffman encoding, Lempel-Ziv method), detection of regularities in words, algorithms for words with don't care symbols (partial words), word distance algorithms, longest common subsequence algorithms, approximate pattern matching. The presentation of each theoretical topic from the above will be accompanied by a brief discussion on its possible applications. Literature • T.H. Cormen, C.E. Leiserson, R.L. Rivest, C. Stein: Introduction to Algorithms (3rd Edition), MIT Press, 2009. • M. Crochemore, C. Hancart, T. Lecroq: Algorithms on Strings, Cambridge University Press, 2007. • M. Crochemore, W. Rytter: Jewels of Stringology, World Scientific, 2002. • D. Gusfield. Algorithms on strings, trees, and sequences: computer science and computational biology. Cambridge University Press, 1997.	4 WLH
Examination: Oral examination (approx. 20 minutes) **Examination requirements:** basic combinatorics on words, pattern matching algorithms, data structures for text indexing (suffix arrays, suffix trees), text compression (Huffman encoding, Lempel-Ziv method), detection of regularities in words, algorithms for words with don't care symbols (partial words), word distance algorithms, longest common subsequence algorithms, approximate pattern matching	5 C

| **Module M.Inf.1115: Advanced Topics on Algorithms** | 4 WLH |

| **Learning outcome, core skills:** | **Workload:** |
| We expect that the students will become familiar with efficient sorting and searching methods, advanced data structures, dynamic data structures, as well as other efficient algorithmic methods, they will be able to estimate the complexity of those algorithms, and they will be able to apply those algorithms to particular programming problems (from practical or theoretical settings). | Attendance time: 56 h Self-study time: 94 h |

| **Course: Advanced Topics on Algorithms** (Lecture, Exercise) | 4 WLH |
| *Contents*: In this course we present a series of selected results on data structures and efficient algorithms, and discuss a series of areas in which they can be applied successfully. The emphasis of the course is on the theory, we also approach the problem of a practical implementation of the presented algorithms. | |

The main topics our course will cover are: efficient sorting and searching (non-comparison based methods, van Emde Boas trees, Radix Sort), advanced tree-structures (Fibonacci heaps, B-Trees, structures for working with disjoint sets), dynamic data structures (range minimum queries, lowest common ancestor, applications to string algorithms: suffix arrays, suffix trees), Hashing and Dictionaries, Young tableaux, geometric algorithms (convex hull), number theoretic algorithms. The presentation of each theoretical topic from the above will be accompanied by a brief discussion on its possible applications.

| Georg-August-Universität Göttingen | 5 C |
| Module M.Inf.1121: Specialisation Mobile Communication | 3 WLH |

Learning outcome, core skills:	**Workload:**
On completion of the module students should be able to:	Attendance time: 42 h
• recall the basic terms and definitions of wireless ad hoc networks, their history and name their basic application areas	Self-study time: 108 h
• describe the special characteristics of the physical layer of wireless ad hoc networks	
• differentiate the various media access control (MAC) schemes as used in wireless ad hoc networks; and name their challenges	
• explain the network protocols used in wireless ad hoc networks, reason the design decisions taken in this context as well as classifying and comparing the different existing routing protocol approaches	
• identify the energy management issues in wireless ad hoc networks and classify existing energy management schemes	
• describe security challenges in ad hoc networks, threats and attacks and corresponding security solutions such as cryptography schemes, key management, secure routing protocols and soft security mechanisms	
• discuss the challenges on the transport layer in wireless ad hoc and sensor networks, compare them to existing protocols, classify them and discuss enhancements of TCP for wireless ad hoc networks	
• describe the challenges of wireless sensor networks (WSN) and explain the differences to wireless ad hoc networks	
• memorize the WSN architecture and topology, the used operating systems and the existing hardware nodes	
• discuss the optimization goals in WSNs, the used MAC protocols as well as the utilised naming and addressing schemes; additionally, describe the used approaches for time synchronization, localization and routing	

| **Course: Wireless Ad Hoc and Sensor Networks** (Lecture, Exercise) | 3 WLH |

| **Examination: Written exam (90 min.) or oral exam (approx. 20 min.)** **Examination requirements:** | 5 C |
| Terms, definitions and characteristics of wireless ad hoc networks; Network Layer used in wireless ad hoc networks (Physical, MAC, Network Layer, Transport, Application); Energy Management; Security Challenges, threats and attacks in wireless ad hoc networks and their counter measures (cryptographic schemes, key management, secure routing, soft security); architecture, topologies and characteristics of wireless sensor networks (WSNs) and the differences to ad hoc networks; WSN specifics (naming and addressing, synchronization, localization and routing) | |

Learning outcome, core skills:	Workload:
On completion of the module students should be able to:	Attendance time: 28 h
	Self-study time: 122 h

Learning outcome, core skills:

On completion of the module students should be able to:

- critically investigate current research topics from the area of telematics such as bio-inspired approaches in the area of wireless communication or security attacks and countermeasures for mobile wireless networks
- collect, evaluate related work and reference them correctly
- summarize the findings in a written report
- prepare a scientific presentation of the chosen research topic

Workload:
Attendance time: 28 h
Self-study time: 122 h

Course: Network Security and Privacy (Seminar)	2 WLH
Course: Security of Self-organizing Networks (Seminar)	2 WLH
Course: Trust and Reputation Systems (Seminar)	2 WLH
Examination: Presentation (approx. 45 minutes) and written report (max. 20 pages) **Examination requirements:** The students shall show that • they are able to become acquainted with an advanced topic in telematics by investigating up-to-date research publications. • they are able to present up-to-date research on an advanced topic in telematics. • they are able to assess up-to-date research on an advanced topic in telematics. • they are able to write a scientific report on an advanced topic in telematics according to good scientific practice.	5 C

Admission requirements: none	Recommended previous knowledge: Basic knowledge in telematics and computer networks
Language: English	Person responsible for module: Prof. Dr. Dieter Hogrefe
Course frequency: unregelmäßig	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester:
Maximum number of students: 15	

Georg-August-Universität Göttingen **Module M.Inf.1123: Computer Networks**	5 C 2 WLH

Learning outcome, core skills: The students • have gained a deeper knowledge in specific topics within the computer networks field • have improved their oral presentation skills • know how to methodically read and analyse scientific research papers • know how to write an analysis of a specific research field based on their analysis of state-of-the-art research • have improved their ability to work independently in a pre-defined context	**Workload:** Attendance time: 28 h Self-study time: 122 h

Course: Advanced Topics in Mobile Communications (Seminar)	2 WLH
Examination: Präsentation (ca. 30 Min.) und Hausarbeit (max. 15 Seiten) **Examination requirements:** Knowledge in a specific field of mobile communication; Ability to present the earned knowledge in a proper way both orally and in a written report	5 C

Admission requirements: none	**Recommended previous knowledge:** Basic knowledge in computer networks; basics of algorithms and data structures
Language: English	**Person responsible for module:** Prof. Dr. Xiaoming Fu

Module M.Inf.1129: Social Networks and Big Data Methods	2 WLH

Learning outcome, core skills:	Workload:
The students • are familiar with basic concepts of social networks • know how to methodically read and analyse scientific research papers • have enriched their practical skills in computer science with regards to analysis of big data applications • have improved their ability to work independently in a pre-defined context • have improved their ability to work in diverse teams	Attendance time: 28 h Self-study time: 122 h

Course: Social Networks and Big Data Methods (Exercise, Seminar)	2 WLH
Examination: Term Paper (max. 20 pages) **Examination prerequisites:** Erreichen von mindestes 50% der Übungspunkte **Examination requirements:** Basic knowledge in social networks and data analysis; ability to transfer the theoretical knowledge to practical exercises; ability to present the earned knowledge in a proper written report	5 C

Admission requirements: none	Recommended previous knowledge: Basic knowledge in computer networks; basics of algorithms and data structures; advanced programming skills
Language: English	**Person responsible for module:** Prof. Dr. Xiaoming Fu
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 15	

Georg-August-Universität Göttingen **Module M.Inf.1130: Software-defined Networks (SDN)**	5 C 3 WLH

Learning outcome, core skills: The students • are familiar with the concepts of software defined networking (SDN) • know how to methodically read and analyse scientific research papers • have enriched their practical skills in computer networks with regards to SDN • know about practical deployability issues of SDN • have improved their ability to work independently in a pre-defined context	**Workload:** Attendance time: 42 h Self-study time: 108 h

Course: Software-defined Networking (Exercise, Seminar)	2 WLH
Examination: Written examination (90 minutes) **Examination prerequisites:** Achievement of at least 50% of the exercise points **Examination requirements:** Knowledge in software-defined networking; ability to transfer the theoretical knowledge to practical exercises; ability to present the earned knowledge	5 C

Admission requirements: none	**Recommended previous knowledge:** Basic knowledge in computer networks; basics of algorithms and data structures; advanced programming skills
Language: English	**Person responsible for module:** Prof. Dr. Xiaoming Fu
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 15	

Georg-August-Universität Göttingen	5 C
Module M.Inf.1138: Usable Security and Privacy	4 WLH

Learning outcome, core skills:	**Workload:**
On completion of the module, students should be able to:	Attendance time:
• Understand the needs for usability in secure and privacy-preserving solutions and the associated challenges,	56 h
• Present and discuss selected themes addressed in the research area of usable security and privacy,	Self-study time: 94 h
• Define and understand the principles and guidelines to apply when designing new solutions,	
• Describe and compare different methodologies to conduct user studies,	
• Plan user studies from their design to the processing and presentation of the results.	

Course: Usable Security and Privacy (Lecture, Exercise)	4 WLH
Examination: Written exam (90 min.) or oral exam (ca. 20 min.) **Examination requirements:** Introduction to usable security and privacy, selected topics in the research field of usable security and privacy, human-computer interaction principles and guidelines, methods to design and evaluate usable solutions in the area of security and privacy.	5 C

Admission requirements: none	**Recommended previous knowledge:** Backgrounds in Computer Security and Privacy
Language: English	**Person responsible for module:** Prof. Dr. Delphine Reinhardt
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 20	

Georg-August-Universität Göttingen **Module M.Inf.1139: Privacy-Enhancing Technologies**	5 C 4 WLH

Learning outcome, core skills: After successfully completing the module, students are able to: • Define and understand the basic concepts of privacy protection, • Identify and classify the different existing threats against privacy, • Define and understand the legal principles of data protection in Germany, the EU and worldwide, • Explain the principles of fundamental privacy-enhancing technologies as well as define and compare their protection goals, • Understand and analyze selected cutting-edge privacy-enhancing solutions.	**Workload:** Attendance time: 56 h Self-study time: 94 h

Course: **Privacy-Enhancing Technologies** (Lecture, Exercise)	4 WLH
Examination: Written exam (90 min) or oral exam (approx. 20 min) **Examination requirements:** Privacy threats, data protection legal framework, anonymity, anonymization techniques and services, privacy-enhancing technologies, applied privacy protection.	5 C

Admission requirements: none	**Recommended previous knowledge:** Basic knowledge in communication networks, databases, and data processing.
Language: English, German	**Person responsible for module:** Prof. Dr. Delphine Reinhardt

Georg-August-Universität Göttingen	5 C
	2 WLH
Module M.Inf.1155: Seminar: Advanced Topics in Software Engineering	

Learning outcome, core skills:	**Workload:**
The students	Attendance time: 28 h
• learn to become acquainted with an advanced topic in software engineering by studying up-to-date research papers.	Self-study time: 122 h
• gain knowledge about advanced topics in software engineering. The advanced topic may be related to areas such as software development processes, software quality assurance, and software evolution.	
• learn to present and discuss up-to-date research on advanced topics in software engineering.	
• learn to assess up-to-date research on advanced topics in software engineering.	

Course: Seminar on Advanced Topics in Software-Engineering (Seminar)	2 WLH
Contents:	
Topics which will be covered by this seminar can include	
• Usability and Usability-Engineering	
• User-oriented Usability Testing	
• Expert-oriented Usability Evaluation	
• Web-analytics	
• Information Architecture	
• SOA – Service-oriented Architecture	
• UML-Tools and Code Generation	
• Details of Specific Process Models	
• Model-driven Architecture	
• Usage-based Testing	
• Defect Prediction	
• Design Patterns	
• Agent-based Simulation	
• Reliability-Engineering for Cloud Systems	

Examination: Presentation (approx. 45 minutes) and written report (max. 20 pages)	5 C
Examination prerequisites:	
Attendance in 80% of the seminar presentations	
Examination requirements:	
The students shall show that	
• they are able to become acquainted with an advanced topic in software engineering by investigating up-to-date research publications.	
• they are able to present up-to-date research on an advanced topic in software engineering.	
• they are able to assess up-to-date research on an advanced topic in software engineering.	

- they are able to write a scientific report on an advanced topic in software engineering according to good scientific practice.

Presentation of an advanced topic in software engineering and written report.

Admission requirements: none	Recommended previous knowledge: Foundations of software engineering.
Language: English	Person responsible for module: Prof. Dr. Jens Grabowski
Course frequency: unregelmäßig	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester:
Maximum number of students: 30	

Georg-August-Universität Göttingen	6 C
Module M.Inf.1161: Image Analysis and Image Understanding	4 WLH

Learning outcome, core skills:	**Workload:**
Kompetenz, grundlegende Techniken der Bildverarbeitung sinnvoll zur Auswertung von Bilddaten einzusetzen; Verständnis für Probleme, Methoden und Begrenzungen der Bildanalyse mit elementaren Signalverarbeitungs- und höheren KI-Ansätzen.	Attendance time: 56 h Self-study time: 124 h

Course: Bildanalyse und Bildverstehen (Lecture, Exercise)	4 WLH
Examination: Klausur (120 Min.) oder mündliche Prüfung (ca. 25 Min.) **Examination prerequisites:** Aktive Teilnahme an den Übungen belegt durch die erfolgreiche Bearbeitung von 60 % der Übungszettel **Examination requirements:** Nachweis über den Erwerb vertiefter Kenntnisse und Fähigkeiten: Kompetenz, grundlegende Techniken der Bildverarbeitung sinnvoll zur Auswertung von Bilddaten einzusetzen; Verständnis für Probleme, Methoden und Begrenzungen der Bildanalyse mit elementaren Signalverarbeitungs- und höheren KI-Ansätzen.	6 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: German, English	**Person responsible for module:** Prof. Dr. Winfried Kurth
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 100	

Georg-August-Universität Göttingen	5 C
Module M.Inf.1171: Cloud and Service Computing	3 WLH

Learning outcome, core skills: Successfully completing the module, students understand • hybrid clouds, consisting of private and public clouds • basic web technologies (transfer protocols, markup languages, markup processing, RESTful and SOAP web services) • virtualization technologies (server, storage, and network virtualization) • data services (sharing, management, and analysis) • continuous integration/continuous delivery • container and orchestration in clouds (e.g. Kubernetes, OpenStack Heat) • monitoring of cloud infrastructures • interoperability in clouds (e.g. Helm) • portability and security • microservices • cloud computing workloads On completion of this module students will have a good understanding of the fundamental and up-to-date concepts used in the context cloud computing. This basic knowledge can be leveraged by students to design, implement, and manage service-oriented cloud infrastructures by themselves.	**Workload:** Attendance time: 42 h Self-study time: 108 h

Course: Cloud and Service Computing (Lecture, Exercise) *Contents*: Cloud Computing is a method of providing shared computing resources, such as applications, computing, storage, networking, development, and deployment platforms. In cloud computing these resources can be delivered as service to the user. Such Service-oriented infrastructures are the backbone of modern IT systems. They pool resources, enable collaboration between people, and provide complex services to end-users. Everybody who uses today's web applications implicitly relies on sophisticated service-oriented infrastructures. The same is true for users of mobile devices such as tablet computers and smart phones, which provide most of their benefits leveraging services. The key challenges of cloud computing infrastructures are related to scaling services. More specifically large cloud-computing infrastructures require scalability of IT management, programming models, and power consumption. The challenges to scale services lie in the inherent complexity of hardware, software, and the large amount of user requests, which large-scale services are expected to handle. This module teaches methods that address and solve those challenges in practice. Key aspects of the module are the management of IT infrastructures, the management of service landscapes, and programming models for distributed applications. The module covers the virtualization of computing, storage, and network resources as the fundament for scaling. IT management is covered by the discussion of deployment	3 WLH

models, service level agreements. Programming models are covered by discussing RESTful and SOAP web-services.

Both, lectures and exercises, keep a close connection to the practical application of the discussed topics. The practical value of service-oriented infrastructures is highlighted in the context of enterprises as well as in the context of science. The methods taught in this module benefit from the lecturers' experiences at GWDG and thus provide exclusive insights into the topic. After successfully attending these modules students will understand the most important aspects to design, implement, and manage internet-scale cloud computing infrastructures.

Examination: Written exam (90 min) or oral exam (approx. 30 min) **Examination requirements:** • Hybrid and Multi cloud infrastructures • RESTful and SOAP web services • Compute, storage, and network virtualisation • Infrastructure-as-a-service, platform-as-a-service, software-as-a-service • Characteristics of Cloud computing (NIST) • Service life cycle • Service level agreements • Cloud computing workloads (e.g. batch, SaaS, big data, back-end)	5 C

Admission requirements: none	**Recommended previous knowledge:** • Basic programming skills • Basic knowledge of Linux operating systems
Language: English	**Person responsible for module:** Prof. Dr. Ramin Yahyapour
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** Bachelor: 5 - 6; Master: 1 - 4
Maximum number of students: 50	

Georg-August-Universität Göttingen **Module M.Inf.1172: Using Research Infrastructures**	5 C 3 WLH

Learning outcome, core skills: Successfully completing the module, students • understand what methods and services are available in state-of-the-art research infrastructures and direction of future development • understand the infrastructures for eScience and eResearch • know basics of data management and data analysis • know the fundamental of technologies like cloud computing and grids • understand the real-world problems from different domains (e.g., high energy physics, humanities, medical science, etc.) which are tackled by research infrastructures • understand certain aspects, methods and tools of these infrastructures for different use cases from different domains • will be motivated to take part in other related modules (e.g., Specialization in Distributed Systems, Parallel Computing, etc.)	**Workload:** Attendance time: 42 h Self-study time: 108 h

Course: Using Research Infrastructures - Examples from Humanities and Sciences (Lecture, Exercise) *Contents*: Successfully completing the lecture, students • understand the role and importance of the research infrastructure and their general building blocks • know the basics of grid computing • know the basics of cloud computing • learn basics on system virtualization • learn fundamental ideas of data management and analysis • understand the real-world problems from different domains (e.g., high energy physics, humanities, medical science/life science, etc.) which are tackled by research infrastructures • understand certain aspects, methods and tools of these infrastructures for different use cases from different domains • will be motivated to take part in other related modules (e.g., Specialization in Distributed Systems, Parallel Computing, etc.) • get familiar with real-world challenges through talks from experts who will present their current research activities and the role of research infrastructures on their research	3 WLH

Examination: Written examination (90 minutes) **Examination requirements:** Grid computing; cloud computing; system virtualization; data management; data analysis; application of eResearch infrastructure in high energy physics; eResearch in medicine and life science; eResearch in humanities	5 C

Admission requirements:	Recommended previous knowledge:
none	none
Language:	**Person responsible for module:**

Georg-August-Universität Göttingen	5 C
Module M.Inf.1185: Sensor Data Fusion	4 WLH

Learning outcome, core skills:	**Workload:**
This module is concerned with fundamental principles and algorithms for the processing and fusion of noisy (sensor) data. Applications in the context of navigation, object tracking, sensor networks, robotics, Internet-of-Things, and data science are discussed.	Attendance time: 56 h
After successful completion of the module, students are able to	Self-study time: 94 h
• define the notion of data fusion and distinguish different data fusion levels	
• formalize data fusion problems as state estimation problems	
• develop distributed and decentralized data fusion architectures	
• describe the basic concepts of linear estimation theory	
• explain the fundamental formulas for the fusion of noisy data	
• deal with unknown correlations in data fusion	
• understand the Bayesian approach to data fusion and estimation	
• formulate dynamic models for time-varying phenomena	
• describe the concept of a recursive Bayesian state estimator	
• explain and apply the Kalman filter for state estimation in dynamic systems	
• explain and apply basic nonlinear estimation techniques such as the Extended Kalman filter (EKF) and Unscented Kalman filter (UKF)	
• assess the properties, advantages, and disadvantages of the discussed (nonlinear) estimators	
• explain different approaches to deal with uncertainty such as probability theory, fuzzy theory, and Dempster–Shafer theory	
• identify data fusion applications and assess the benefits of data fusion	

Course: Sensor Data Fusion (Lecture, Exercise)	4 WLH

Examination: Written exam (90 min.) or oral exam (approx. 20 min.) **Examination requirements:**	5 C
Definition of data fusion; data fusion levels; formalization of data fusion problems; distributed and decentralized fusion architectures; linear estimation theory; fundamental fusion formulas; dynamic state estimation; Kalman filter; Extended Kalman filter (EKF); Unscented Kalman filter (UKF), algorithms for dealing with unknown correlations; fuzzy theory; Dempster-Shafer theory

Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 15	

Georg-August-Universität Göttingen	5 C
Module M.Inf.1188: Mobile Robotics	4 WLH

Learning outcome, core skills:	Workload:
This module is concerned with fundamental principles and algorithms for mobile robot navigation and perception. After completion, the students are able to - model the locomotion of wheeled mobile robots - understand the concept of dead reckoning - describe the most common sensors for mobile robots, e.g., inertial sensors and beam-based sensors - employ probabilistic state estimation methods such as Kalman filters and sequential Monte Carlo methods (particle filters) for robot navigation and perception - describe and distinguish different concepts for localization such as trilateration and triangulation - implement and evaluate basic algorithms for localization - understand the robot mapping problem and explain different map representations such as occupancy grids - describe the problem of Simultaneous Localization and Mapping (SLAM) - implement and evaluate basic algorithms for SLAM such as graph-based approaches and Rao-Blackwellized particle filters - implement and evaluate basic feature extraction methods such as Random Sample Consensus (RANSAC) - design basic planning algorithms for mobile robots using, e.g., a Markov Decision Process (MDP)	**Workload:** Attendance time: 56 h Self-study time: 94 h

Course: Mobile Robotics (Lecture, Exercise)	4 WLH

Examination: Written exam (90 min.) or oral exam (approx. 20 min.) **Examination requirements:** Motion models for wheeled robots; dead reckoning; mobile robot sensors; Kalman filter; particle filter; localization concepts and algorithms; robot mapping; Simultaneous Localization and Mapping (SLAM); feature extraction methods; planning algorithms	5 C

Admission requirements: none	**Recommended previous knowledge:** none

Georg-August-Universität Göttingen	5 C
Module M.Inf.1191: Privacy in Ubiquitous Computing	4 WLH

Learning outcome, core skills:	Workload:
After successful completion of the module, students are able to: • Define and understand the key concepts of privacy and ubiquitous computing, • Identify and classify threats to privacy in ubiquitous computing, • Describe, compare, and choose fundamental techniques to protect privacy, • Understand and analyze cutting-edge solutions.	**Attendance time:** 56 h **Self-study time:** 94 h

Course: **Privacy in Ubiquitous Computing** (Lecture, Exercise)	4 WLH
Examination: Written exam (90 min.) or oral exam (approx. 20 min.) **Examination prerequisites:** Active participation during the exercises. **Examination requirements:** Introduction to privacy and ubiquitous computing, privacy threats, privacy-enhancing technologies, wireless sensor networks, smart meters, participatory sensing, RFIDs, Internet-of-Things.	5 C

Admission requirements: none	Recommended previous knowledge: M.Inf.1120, M.Inf.1121
Language: English	**Person responsible for module:** Prof. Dr. Delphine Reinhardt
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 50	

Georg-August-Universität Göttingen	5 C
Module M.Inf.1192: Seminar on Privacy in Ubiquitous Computing	2 WLH

Learning outcome, core skills:	**Workload:**
none	Attendance time: 28 h
	Self-study time: 122 h

Course: Seminar on Privacy in Ubiquitous Computing (Seminar)	2 WLH
Examination: Presentation (approx. 30 minutes) and written report (max. 15 pages)	5 C
Examination requirements: The students shall show that:	

- They are able to conduct literature research on a topic in the area of privacy in ubiquitous computing,
- They are able to explain selected solutions related to the chosen topic,
- They are able to compare these solutions by analyzing their potential advantages and limitations,
- They are able to write a structured scientific report on their findings by respecting the rules of good scientific practice,
- They are able to present and to critically discuss their findings in a presentation.

Admission requirements:	**Recommended previous knowledge:**
none	Basic knowledge in privacy
Language: English	**Person responsible for module:** Prof. Dr. Delphine Reinhardt
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 15	

Additional notes and regulations:

On completion of the module, students should be able to:

- Investigate selected topics in privacy in ubiquitous computing,
- Identify existing solutions in the area to be investigated,
- Explain, compare, and discuss these solutions,
- Develop new ideas to improve the existing solutions,
- Summarize their findings in a written report,
- Give a presentation about the chosen area.

Georg-August-Universität Göttingen **Module M.Inf.1193: Seminar on Usable Security and Privacy**	5 C 2 WLH

Learning outcome, core skills: On completion of the module, students should be able to: • Investigate a selected topic related to usability in the field of security and privacy, • Identify relevant publications to address this topic and survey the state-of-the-art, • Understand, present, and explain issues encountered by the users, • Develop and describe new ideas to address these issues, • Summarize their findings in a written report, • Give a presentation about their chosen topic.	**Workload:** Attendance time: 28 h Self-study time: 122 h

Course: Seminar Usable Security and Privacy (Seminar)	2 WLH
Examination: Presentation (approx. 30 min.) and written report (max. 15 pages) **Examination requirements:** The students shall show that: • They are able to conduct literature research on a topic in the area of usable security and privacy, • They are able to identify, understand, and explain usability issues encountered in this area, • They are able to propose novel solutions to these issues and discuss their potential advantages and limitations, • They are able to write a structured scientific report on their findings by respecting the rules of good scientific practice, • They are able to present and critically discuss their findings in a presentation.	5 C

Admission requirements: none	**Recommended previous knowledge:** Basic knowledge of privacy and usability obtained, e.g., in the recommended lecture "Usable Security and Privacy"

Contents: Die forschungsbezogene Projektarbeit ist an ein aktuelles Forschungsvorhaben zur Neuroinformatik gekoppelt. Die Tätigkeit des Studierenden liegt im Kernbereich dieses Vorhabens. Sie reicht vom Studium projektrelevanter wissenschaftlicher Literatur über die Mitarbeit zu Lösungsvorschlägen bis hin zur praktischen Umsetzung der auf diese Weise erworbenen Kenntnisse und Einsichten.	
Examination: Term Paper (max. 20 pages), not graded **Examination requirements:** Kompetenzen im Bereich der projektbezogenen und forschungsorientierten Teamarbeit und des Projektmanagements ggf. Erwerb von Fähigkeiten beim Umsetzen theoretischer Konzepte in praktische Lösungen in einem Forschungsprojekt der Neuroinformatik.	

Admission requirements:	Recommended previous knowledge:
none	none
Language: German, English	**Person responsible for module:** Prof. Dr. Florentin Andreas Wörgötter
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**

Georg-August-Universität Göttingen **Module M.Inf.1210: Seminar on Algorithmic Methods and Theoretical Concepts in Computer Science**	5 C 2 WLH

Learning outcome, core skills: Erwerb von Kompetenzen bei der selbständigen Erarbeitung und Präsentation von speziellen, forschungsbezogenen Themen zur Theoretischen Informatik und den Algorithmischen Methoden. Beispiele sind Probabilistische Datenmodelle, ihre mathematischen Grundlagen und ihre algorithmische Unterstützung, theoretische Grundlagen der Anwendung Informationstheoretischer Methoden in der Informatik, Methoden der Mustererkennung und des algorithmischen Lernens und ihrer Anwendungen. Überblick über die Modulinhalte: Aktuelle Originalarbeiten aus dem Bereich der theoretischen Informatik und algorithmischer Methoden.	**Workload:** Attendance time: 28 h Self-study time: 122 h

Course: Algorithmische Methoden und theoretische Konzepte (Seminar) *Contents*: Aktuelle Originalarbeiten aus dem Bereich der theoretischen Informatik und algorithmischer Methoden.	2 WLH
Examination: Vortrag (ca. 45 Min.) mit schriftlicher Ausarbeitung (max. 10 Seiten) **Examination requirements:** Nachweis über den Erwerb von Kompetenzen bei der selbständigen Erarbeitung und Präsentation von forschungsbezogenen Themen zu den Algorithmischen Methoden und fortgeschrittenen theoretischen Konzepten in der Informatik oder einer der Angewandten Informatiken.	5 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: German, English	**Person responsible for module:** Prof. Dr. Stephan Waack (Prof. Dr. Carsten Damm)
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 14	

Georg-August-Universität Göttingen **Module M.Inf.1211: Probabilistic Data Models and Applications**	6 C 4 WLH

Learning outcome, core skills: In dem Modul erwerben Studierende spezialisierte Kenntnisse zu Auswahl, Entwurf und Anwendungen von Modellen, für die die (parametrisierte) Zufälligkeit der Daten eine wesentliche Komponente der Modellierung ist. Überblick über die Modulinhalte: Zu verarbeitende Daten in verschiedensten Anwendungsbreichen (z. B. Bioinformatik) unterliegen meist statistischen Gesetzmäßigkeiten. Das Modul ist fokussiert auf Methoden zur Erkennung und algorithmischen Ausnutzung solcher typischen Muster durch geeignete probabilistische Modellierung der Daten und auf die Schätzung der Modellparameter. z. B. Vorlesung Algorithmisches Lernen, Vorlesung Datenkompression und Informationstheorie, Probabilistische Datenmodelle in der Angewandten Informatik.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Vorlesungen, Übungen und Seminare zu den vorgenannten Themen	
Examination: Klausur (60 Min.) oder mündliche Prüfung (ca. 20 Min.) **Examination requirements:** Nachweis über den Erwerb spezialisierter Kenntnisse und Fähigkeiten zu probabilistischen Datenmodellen, der Komplexität ihrer algorithmischen Unterstützung und ggf. ihrer Anwendung in einer der Angewandten Informatiken oder einem Anwendungsbereich.	6 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: German, English	**Person responsible for module:** Prof. Dr. Stephan Waack (Prof. Dr. Carsten Damm)
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 30	

Georg-August-Universität Göttingen	6 C
Module M.Inf.1213: Algorithmic Learning and Pattern Recognition	4 WLH

Learning outcome, core skills:	**Workload:**
Es werden spezialisierte Kompetenzen im Bereich des algorithmischen Lernens und der Mustererkennung vermittelt. Verständnis der theoretischen Grundlagen und der Probleme bei praktischen Anwendungen.	Attendance time: 56 h Self-study time: 124 h

Course: Algorithmisches Lernen (Lecture, Exercise)	4 WLH
Contents: Es werden die Grundlagen des Algorithmischen Lernens vermittelt, prinzipielle Schranken und Möglichkeiten aufgezeigt und einige spezielle Ansätze diskutiert wie z. B. Grundlagen des PAC-Lernens und des PAC-Lernens mit Rauschen auf der Klassifikation. Schlüsselbegriffe wie VC Dimension und Rademacher-Komplexität von Hypothesenklassen die es ermöglichen, sowohl Möglichkeiten als auch Grenzen der Lernbarkeit zu verstehen.	
Examination: Klausur (60 Min.) oder mündliche Prüfung (ca. 20 Min.) **Examination requirements:** Nachweis über den Erwerb spezialisierter anwendungsorientierter Kenntnisse und Kompetenzen aus dem Bereich des algorithmischen Lernens und der Mustererkennung.	6 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: German, English	**Person responsible for module:** Prof. Dr. Stephan Waack (Prof. Dr. Carsten Damm)
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 30	

Georg-August-Universität Göttingen	6 C
Module M.Inf.1215: Error Correcting Codes	4 WLH

Learning outcome, core skills:	**Workload:**
Die Studierenden • kennen den schematischen Aufbau von Kommunikationssystemen und verstehen ihre stochastischen/algorithmischen Beschreibungen • kennen einfache Kanalcodes und können ihre Parameter bestimmen • kennen verschiedene Decodierprinzipien, können sie im Rahmen der statistischen Schätztheorie interpretieren und ihre algorithmische Komplexität analysieren • verstehen im Detail die Grundzüge der Theorie linearer Codes und effiziente Decodierverfahren für spezielle Codes • kennen und verstehen kombinatorische und asymptotische untere und obere Schranken für die Existenz von Codes • beherrschen allgemeine Konstruktionsverfahren für Fehlerkorrektur-Codes bzw. Codecs und können sie mit geeigneter Software implementieren • kennen die Grundzüge der Informationstheorie und den Kanalcodierungssatz und können bekannte Codefamilien diesbezüglich bewerten • verstehen die algebraische Theorie zyklischer Codes und können sie für die Konstruktion von Codes mit speziellen Eigenschaften anwenden • kennen Reed-Solomon-Codes und ihre Eigenschaften und Anwendungen, können sie im Vergleich zu allgemeinen algebraischen Codes bewerten • beherrschen verschiedene Decodierverfahren für RS-Codes und können sie analysieren	Attendance time: 56 h Self-study time: 124 h

Course: Fehlerkorrigierende Codes (Lecture, Exercise)	4 WLH
Examination: Klausur (90 Min.) oder mündliche Prüfung (ca. 20 Min.) **Examination prerequisites:** Bearbeitung von 50% aller Übungsblätter, Vorführung mindestens einer Aufgabe während der Übung, kontinuierliche Teilnahme an den Übungen **Examination requirements:** In der Prüfung wird die aktive Beherrschung der vermittelten Inhalte und Techniken nachgewiesen, z.B. • Verständnis der Zusammenhänge durch Umschreibung in eigenen Worten nachweisen • Konstruktion von Codes nach Vorgabe kombinatorischer Parameter • Parameter gegebener Codes bestimmen • Decodierung gestörter Empfangswörter • Codier-/Decodierverfahren nach Korrektheit und Komplexität analysieren • begründete Auswahl von Codierungsverfahren in hypothetischer Anwendungssituation • (teilweise) programmtechnische Umsetzung von Kanal-(De-)codierern	6 C

Admission requirements:	**Recommended previous knowledge:**
none	

	Beherrschung einer Programmiersprache, Grundkenntnisse der Theorie endlicher Körper
Language: German, English	**Person responsible for module:** Prof. Dr. Carsten Damm
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 30	

Georg-August-Universität Göttingen	6 C
Module M.Inf.1216: Data Compression and Information Theory	4 WLH

Learning outcome, core skills:	**Workload:**
Die Studierenden	Attendance time: 56 h
• kennen den schematischen Aufbau von Kommunikationssystemen und verstehen ihre stochastischen/algorithmischen Beschreibungen	Self-study time: 124 h
• kennen die Grundbegriffe und Sätze der Shannonschen und der algorithmischen Informationstheorie und können sie in konkreten Situationen anwenden	
• kennen grundlegende verlustfreie Quellencodes (Huffman, Shannon, Lauflängen) und Erweiterungen sowie arithmetische Codes und können ihre Eignung in Anwendungssituationen bewerten	
• verstehen das Prinzip der Codeadaptionen und seine Implementierung anhand ausgewählter Codes	
• kennen allgemeine Entwurfsprinzipien für Quellencodes und verstehen ihre Umsetzung in konkreten Implementierungen	
• kennen die Schritte der verlustbehafteten Datenkompression und können ihre Leistungsparameter analysieren	
• kennen die Grundzüge der Ratenverzerrungstheorie und können sie in konkreten Situationen anwenden	
• kennen wichtige Beispiele verlustbehafteter Datenkompression, können sie analysieren und in Anwendungssituationen bewerten	

Course: Datenkompression und Informationstheorie (Lecture, Exercise)	4 WLH
Examination: Klausur (90 Min.) oder mündliche Prüfung (ca. 20 Min.) **Examination prerequisites:** Bearbeitung von 50% aller Übungsblätter, Vorführung mindestens einer Aufgabe während der Übung, kontinuierliche Teilnahme an den Übungen **Examination requirements:** In der Prüfung wird die aktive Beherrschung der vermittelten Inhalte und Techniken nachgewiesen, z.B. • Verständnis der Zusammenhänge durch Umschreibung in eigenen Worten nachweisen • Konstruktion von Codes nach Vorgabe stochastischer Parameter • Schätzung stochastischer Parameter von Quellen und Kanälen • begründete Auswahl von Codierungsverfahren in hypothetischer Anwendungssituation • Codeparameter, Kanalkapazität etc. berechnen • (teilweise) programmtechnische Umsetzung von Quellen (de-)codierern • modulare Beschreibung konkreter Kommunikationssysteme darlegen • Leistungsparameter konkreter Quellencodierverfahren analysieren	6 C

Admission requirements:	**Recommended previous knowledge:**
none	Beherrschung einer Programmiersprache

Language:	Person responsible for module:
German, English	Prof. Dr. Carsten Damm

Georg-August-Universität Göttingen	5 C
Module M.Inf.1222: Specialisation Computer Networks	2 WLH

Learning outcome, core skills:	**Workload:**
The students	Attendance time:
	28 h
• have gained a deeper knowledge in specific topics within the computer networks field	Self-study time:
• have improved their oral presentation skills	122 h
• know how to methodically read and analyse scientific research papers	
• know how to write an analysis of a specific research field based on their analysis of state-of-the-art research	
• have improved their ability to work independently in a pre-defined context	

Course: Advanced Topics in Computer Networks (Seminar)	2 WLH
Examination: Präsentation (ca. 30 min.) und Hausarbeit (max. 15 Seiten)	5 C
Examination requirements:	
Knowledge in a specific field of advanced computer networks technology; ability to present the earned knowledge in a proper way both orally and in a written report	

Admission requirements:	**Recommended previous knowledge:**
none	Basic knowledge in computer networks; basics of algorithms and data structures
Language:	**Person responsible for module:**
English	Prof. Dr. Xiaoming Fu
Course frequency:	**Duration:**
unrregelmäßig	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**
twice	
Maximum number of students:	
30	

Georg-August-Universität Göttingen	5 C
Module M.Inf.1223: Advanced Topics in Computer Networks	3 WLH

Learning outcome, core skills:	Workload:
The students - know the principles of existing and emerging advanced networking technologies - know the details of Peer-to-Peer networks - are capable to describe the principles of cloud computing - have a basic understanding of information centric networking - are able to analyze social networks - have been introduced to state-of-the-art research in the computer networks field	Attendance time: 42 h Self-study time: 108 h

Course: Advanced Topics in Computer Networks (Lecture, Exercise)	3 WLH
Examination: Oral exam (approx. 30 minutes) or written exam (90 minutes) **Examination requirements:** advanced networking technologies, Peer-to-Peer networks, cloud computing, information centric networking, social networks, state-of-the-art research in the computer networks field	5 C

Admission requirements:	Recommended previous knowledge:
none	Basic knowledge in computer networks; basics of algorithms and data structures; basic programming skills
Language: English	**Person responsible for module:** Prof. Dr. Xiaoming Fu
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 100	

Georg-August-Universität Göttingen	6 C
Module M.Inf.1226: Security and Cooperation in Wireless Networks	4 WLH

Learning outcome, core skills:	**Workload:**
On completion of the module students should be able to: • recall cryptographic algorithms and protocols such as encryption, hash functions, message authentication codes, digital signatures and session key establishment • explain security requirements and vulnerabilities of existing wireless networks • discuss upcoming wireless networks and new security challenges that are arising • name trust assumptions and adversary models in the era of ubiquitous computing • show how naming and addressing schemes will be used in the future of the Internet and how these schemes can be protected against attacks • explain how security associations can be established via key establishment, exploiting physical contact, mobility, properties of vicinity and radio link • define secure neighbour discovery and explain the wormhole attack and its detection mechanisms • describe secure routing in multi-hop wireless networks by explaining existing routing protocols, attacks on them and the security mechanisms that can help to achieve secure routing • discuss how privacy protection can be achieved in MANETs in several contexts, such as location privacy and privacy in routing, and recall privacy related notions and metrics • recall selfish and malicious node behaviour on the MAC layer CSMA/CA, in packet forwarding and the impact on wireless operators and the shared spectrum; as countermeasure secure protocols for behaviour enforcement should be known • differentiate between different game theory strategies that can be used in wireless networks	Attendance time: 56 h Self-study time: 124 h

Course: Security and Cooperation in Wireless Networks (Lecture, Exercise)	4 WLH
Examination: Written exam (90 min.) or oral exam (approx. 20 min.) **Examination requirements:** Cryptographic algorithms and protocols, hash functions, message authentication codes, digital signatures, session keys; security requirements, challenges and vulnerabilities in wireless networks; trust assumptions and adversary models in ubiquitous computing; naming and addressing schemes in the future internet; establishment of secure associations (key establishment, exploiting physical contact, mobility, properties of vicinity and radio link); secure neighbourhood discovery and wormhole attack detection mechanisms; secure routing in multi-hop wireless networks; privacy protection in MANETs (location privacy, routing privacy); enforcement of cooperative behaviour in MANETs; game theory strategies used in wireless networks	6 C

Admission requirements:	**Recommended previous knowledge:**
none	Basic knowledge in telematics and computer networks
Language:	**Person responsible for module:**

English	Prof. Dr. Dieter Hogrefe
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 50	

English	Prof. Dr. Dieter Hogrefe

Georg-August-Universität Göttingen **Module M.Inf.1229: Seminar on Specialization in Telematics**	5 C 2 WLH

Learning outcome, core skills: On completion of the module students should be able to: • critically investigate current research topics from the area of telematics such as bio-inspired approaches in the area of wireless communication or security attacks and countermeasures for mobile wireless networks • collect, evaluate related work and reference them correctly • summarize the findings in a written report • prepare a scientific presentation of the chosen research topic	**Workload:** Attendance time: 28 h Self-study time: 122 h

Course: Network Security and Privacy (Seminar)	2 WLH
Course: Security of Self-organizing Networks (Seminar)	2 WLH
Course: Trust and Reputation Systems (Seminar)	2 WLH
Examination: Presentation (approx. 45 minutes) and written report (max. 20 pages) **Examination requirements:** The students shall show that • they are able to become acquainted with a specialized topic in telematics by investigating up-to-date research publications • they are able to present up-to-date research on a specialized topic in telematics • they are able to assess up-to-date research on a specialized topic in telematics • they are able to write a scientific report on a specialized topic in telematics according to good scientific practice	5 C

Admission requirements: none	**Recommended previous knowledge:** Basic knowledge in telematics and computer networks
Language: English	**Person responsible for module:** Prof. Dr. Dieter Hogrefe
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 15	

Georg-August-Universität Göttingen **Module M.Inf.1230: Specialisation Software-defined Networks (SDN)**	5 C 2 WLH

Learning outcome, core skills: The students • are familiar with advanced concepts of software defined networking (SDN) • know how to methodically read, analyse and discuss scientific research papers • have enriched their practical skills in computer networks with regards to SDN and its applications • know about practical deployability issues of SDN • have improved their ability to work independently in a pre-defined context • have improved their ability to work in diverse teams	**Workload:** Attendance time: 28 h Self-study time: 122 h

Course: Specialization in Software-defined Networking (Exercise, Seminar)	2 WLH
Examination: Term Paper (max. 20 pages) **Examination prerequisites:** Erreichen von mindestes 50% der Übungspunkte **Examination requirements:** Advanced knowledge in software-defined networking; ability to transfer the theoretical knowledge to practical exercises; ability to present the earned knowledge in a proper written report	5 C

Admission requirements: none	**Recommended previous knowledge:** Basic knowledge in computer networks; basics of algorithms and data structures; advanced programming skills
Language: English	**Person responsible for module:** Prof. Dr. Xiaoming Fu
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 15	

Georg-August-Universität Göttingen **Module M.Inf.1231: Specialisation in Distributed Systems**	6 C 4 WLH

Learning outcome, core skills: Successfully completing the module, students • have in-depth knowledge about one specific topical area of distributed systems • understand the challenges of designing this specific part of a distributed system and integrating it into a larger infrastructure • understand the tasks to operate this specific part of a distributed system within a modern data centre • can apply their knowledge to evaluate application scenarios and make decisions regarding the applicability of certain technical solutions Examples for specific topics are distributed architectures or distributed data and information management.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Distributed Storage and Information Management (Lecture, Exercise) *Contents*: Successfully completing the module, students • understand how data and information can be stored and managed • know the generic components of a modern data centre • understand how to protect data using RAID and what RAID level to apply to what problem • know about "intelligent" storage systems, including concepts like caching • understand various storage networking technologies like Fibre Channel, iSCSI, and FCoE • know about network-attached, object and unified storage • basically understand how to achieve business continuity of storage systems • understand the different backup and archiving technologies • understand data replication • have a basic understanding of storage virtualization • know how to manage and how to secure storage infrastructures Remark With this lecture, we provide a preparation for the exam for the EMC Information Storage and Management Certificate. The Institute of Computer Science of the University of Göttingen is a Proven Professional of the EMC Academic Alliance. References S. Gnanasundaram, A. Shrivastava (eds.), Information Storage and Management, John Wiley & Sons, 2012. ISBN:978-1-118-09483-9	4 WLH

Examination: Written exam (90 min.) or oral exam (ca. 20 min.) **Examination prerequisites:** Solving and presenting at least one exercise (written solution and presentation), as well as active participation during the exercises.	6 C

Examination requirements:

Information Storage; Data Centre Environment and Components; RAID; Caching; Storage Provisioning; Fibre Channel; IP SAN; FCoE; Network-Attached Storage; Object-Based and Unified Storage; Backup and Archiving; Replication; Storage Cloud; Security in Storage Infrastructures; Management of Storage Infrastructures

Admission requirements: none	**Recommended previous knowledge:** • Computer architecture • Basic network protocols • Virtualisation techniques
Language: English	**Person responsible for module:** Prof. Dr. Ramin Yahyapour (Dr. Philipp Wieder)
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 30	

Georg-August-Universität Göttingen **Module M.Inf.1232: Parallel Computing**	6 C 4 WLH

Learning outcome, core skills: Successfully completing the module, students are able to: • define and describe the benefit of parallel computing • specify the classification of parallel computers (Flyn classification) • analytically evaluate the performance of parallel computing approaches (scaling/ performance models) • know the parallel hardware and performance improvement approaches (cache coherence, pipeline, etc.) • know the interconnects and networks and their role in parallel computing • understand and develop sample parallel programs using different paradigms and development environments (e.g., shared memory and distributed models) • expose to some applications of Parallel Computing through hands-on exercises	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Parallel Computing (Lecture, Exercise) *Contents*: Successfully completing the lecture, students are able to: • define and describe the benefit of parallel computing and identify the role of software and hardware in parallel computing • specify the Flynn classification of parallel computers (SISD, SIMD, MIMD) • analytically evaluate the performance of parallel computing approaches (Scaling/ Performance models) • understand the different architecture of parallel hardware and performance improvement approaches (e.g., caching and cache coherence issues, pipeline, etc.) • define Interconnects and networks for parallel computing • architecture of parallel computing (MPP, Vector, Shared memory, GPU, Many-Core, Clusters, Grid, Cloud) • design and develop parallel software using a systematic approach • parallel computing algorithms and development environments (i.e. shared memory and distributed memory parallel programming) • write parallel algorithms/programs using different paradigms and environments (e.g., POSIX Multi-threaded programming, OpenMP, MPI, OpenCL/CUDA, MapReduce, etc.) • get exposed to some applications of Parallel Computing through exercises References • An Introduction to Parallel Programming, Peter S. Pacheco, Morgan Kaufmann (MK), 2011, ISBN: 978-0-12-374260-5. • Designing and Building Parallel Programs, Ian Foster, Addison-Waesley, 1995, ISBN 0-201-57594-9 (Available online).	4 WLH

- Advanced Computer Architecture: Parallelism, Scalability, Programmability, Kai Hwang, Int. Edition, McGraw Hill, 1993, ISBN: 0-07-113342-9.
- In addition to the mentioned text book, tutorial and survey papers will be distributed in some lectures as extra reading material.

Examination: Klausur (90 Min.) oder mündliche Prüfung (ca. 20 Min.) **Examination requirements:** Parallel programming; Shared Memory Parallelism; Distributed Memory Parallelism, Single Instruction Multiple Data (SIMD); Multiple Instruction Multiple Data (MIMD); Hypercube; Parallel interconnects and networks; Pipelining; Cache Coherence; Parallel Architectures; Parallel Algorithms; OpenMP; MPI; Multi-Threading (pthreads); Heterogeneous Parallelism (GPGPU, OpenCL/CUDA)	6 C

Admission requirements: • Data structures and algorithms • Programming in C/C++	**Recommended previous knowledge:** • Computer architecture • Basic knowledge of computer networks and topologies
Language: English	**Person responsible for module:** Prof. Dr. Ramin Yahyapour
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 50	

Georg-August-Universität Göttingen **Module M.Inf.1234: Emerging Topics in Advanced Computer Networks**	6 C 4 WLH

Learning outcome, core skills: This course covers the principles of existing and emerging advanced networking technologies and services e.g., ICN, SDN, Smart City, IoT, Advanced Networking. In general, students will study computer networks, future Internet architectures and data science related topics. The students will • know the principles of existing and emerging advanced networking technologies and services • have a basic understanding of computer networks • have been introduced to the state-of-the-art research in the relevant field • build a practical system based on the study material covered in the course	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Emerging Topics in Advanced Computer Networks (Lecture, Exercise)	4 WLH
Examination: Oral exam (approx. 30 min) or written exam (90 min) **Examination requirements:** Advanced networking technologies, Peer-to-Peer networks, Data science, state-of-the-art research in the computer networks field	5 C

Admission requirements: none	**Recommended previous knowledge:** • Basic knowledge in computer networks and data science • Basics knowledge of algorithms and data structures • Basic programming skills
Language: English	**Person responsible for module:** Prof. Dr. Xiaoming Fu
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 50	

Georg-August-Universität Göttingen **Module M.Inf.1235: Bio-Inspired Artificial Intelligence**	6 C 4 WLH

Learning outcome, core skills: This course is an introduction to bio-inspired artificial intelligence, explaining its relevant theories and methods that are derived from biological processes. It covers important applications and discusses how to apply biologically inspired algorithms for solving problems. The course will cover concepts and computational models inspired by the area of biology, such as evolutionary systems, cellular systems, neural systems, immune systems, swarm intelligence. On completion of this module, students : • are familiar with the main concepts and methods inspired by biological systems • understand the relevant types of algorithms designed for bio-inspired computing • get knowledge about solving real-world problems with bio-inspired approaches • develop their skills in biologically inspired algorithm design	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Bio-Inspired Artificial Intelligence (Lecture, Exercise) Literature: • Floreano, Dario., and Claudio. Mattiussi. Bio-Inspired Artificial Intelligence Theories, Methods, and Technologies. • Stephan Olariu and Albert Y. Zomaya. Handbook of Bioinspired Algorithms and Applications.	4 WLH
Examination: Written exam (90 min.) or oral exam (approx. 20 min.) **Examination prerequisites:** At least 50% of homework exercises solved. **Examination requirements:** Knowledge of principles of biologically inspired models and computing algorithms, the advantages and limitations of bio-inspired approaches, the value of their application to real world problems, ability to design and implement bio-inspired algorithms.	6 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Dr. Parisa Memarmoshrefi
Course frequency: irregular	**Duration:** 1 semester[s]

Maximum number of students: 30	

Georg-August-Universität Göttingen	6 C
Module M.Inf.1236: High-Performance Data Analytics	4 WLH

Learning outcome, core skills:	**Workload:**
Successfully completing the module, students understand	Attendance time:
	56 h
• the motivation and use-case for large-scale data analytics	Self-study time:
• performance implications of hardware and software system for large-scale data workloads	124 h
• the usage of industry-standard tools to solve data analytics problems	
• algorithms, data structures, data models, tools, and infrastructure for efficient processing of data	

Course: High-Performance Data Analytics (Lecture, Exercise)	4 WLH
Contents:	
Data-driven science requires the handling of large volumes of data in a quick period of time. Executing efficient workflows is challenging for users but also for systems. This module introduces concepts, principles, tools, system architectures, techniques, and algorithms toward large-scale data analytics using distributed and parallel computing. We will investigate the state-of-the-art of processing data of workloads using solutions in High-Performance Computing and Big Data Analytics.	
Topics cover:	
• Challenges in high-performance data analytics	
• Use-cases for large-scale data analytics	
• Performance models for parallel systems and workload execution	
• Data models to organize data and (No)SQL solutions for data management	
• Industry relevant processing models with tools like Hadoop, Spark, and Paraview	
• System architectures for processing large data volumes	
• Relevant algorithms and data structures	
• Visual Analytics	
• Parallel and distributed file systems	
Guest talks from academia and industry will be incorporated in teaching that demonstrates the applicability of this topic.	
Weekly laboratory practicals and tutorials will guide students to learn the concepts and tools. In the process of learning, students will form a learning community and integrate peer learning into the practicals. Students will have opportunities to present their solutions to the challenging tasks in the class. Students will develop presentation skills and gain confidence in the topics.	

Examination: Written exam (90 min) or oral exam (approx. 30 min)	6 C
Examination requirements:	
• Challenges in high-performance data analytics	
• Use-cases for large-scale data analytics	
• Performance models for parallel systems and workload execution	
• Data models to organize data and (No)SQL solutions for data management	
• Industry relevant processing models with tools like Hadoop, Spark, and Paraview	

- System architectures for processing large data volumes
- Relevant algorithms and data structures
- Visual Analytics
- Parallel and distributed file systems

Admission requirements:	Recommended previous knowledge:
none	Basic programming skills, Basic knowledge of Linux operating systems, Python
Language:	**Person responsible for module:**
English	Prof. Dr. Julian Kunkel
Course frequency:	**Duration:**
each winter semester	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**
twice	Bachelor: 5 - 6; Master: 1 - 4
Maximum number of students:	
50	

| Georg-August-Universität Göttingen | 5 C |
| Module M.Inf.1237: Seminar Newest Trends in High-Performance Data Analytics | 2 WLH |

Learning outcome, core skills:	Workload:
High-Performance Data Analytics is a vehicle to extract findings from large data sets. It is an indispensable tool in science and business but a rapidly changing field. As part of this seminar, you will create a presentation and report revolving around a selected hot topic in German or English. You will learn to research literature and may conduct small experiments to provide a holistic view of the selected topic. You will meet regularly with an assigned supervisor and work towards the presentation and report.	Attendance time: 28 h Self-study time: 122 h

The students will be able to

- Appraise research in the area of high-performance data analytics
- Compose a presentation covering their selected topic in depth
- Evaluate findings (tools or theory) of other researchers
- Explain theory and application covering their topic

Course: Seminar Newest Trends in High-Performance Data Analytics (Seminar)	2 WLH
Examination: Presentation (approx. 35 min.) and report (max. 15 pages) Examination prerequisites: Participation in the seminar	5 C

Admission requirements:	Recommended previous knowledge:
none	none
Language:	Person responsible for module:
English, German	Prof. Dr. Julian Kunkel
Course frequency:	Duration:
each summer semester	1 semester[s]
Number of repeat examinations permitted:	Recommended semester:
twice	
Maximum number of students:	
40	

Georg-August-Universität Göttingen	5 C
Module M.Inf.1238: Scalable Computing Systems and Applications in AI, BigData and HPC	3 WLH

Learning outcome, core skills:	Workload:
• Describe approaches for the development of scalable systems and applications • Sketch efficient algorithms and concepts • Analyze and summarize state-of-the-art concepts, tools and research papers • Deliver a technical presentation for a professional audience • Explore and apply concepts or tools to improve scalability for a selected use case • Quantify efficiency and scalability of selected use cases	Attendance time: 42 h Self-study time: 108 h

Course: Scalable Computing Systems and Applications in AI, BigData and HPC (Seminar)	3 WLH
Contents: The module can be considered to consist of a seminar and small-scale practical that are connected by a specific topic. Students will first select a topic and use case, for instance, scalable AI, lock-free data structures, concept or tool. Then, during the term they will prepare a presentation and introduce the topic considering state of the art. Next, a student will realize an individual project by practically working on their topic. They have to evaluate performance and scalability, and then analyze and quantify the contribution of the respective tool. Students can choose on a big variety of topics, some involve concepts and tools. Typically, the evaluation requires some application and programming. More information is provided on the webpage. The results are presented in a final meeting.	

Examination: presentation (approx. 30 minutes) and written report (max. 15 pages; without appendix)	5 C
Examination requirements: See the learning objectives above.	

Admission requirements: none	Recommended previous knowledge: • Linux Basics (you have used Linux and the Bash shell). We will provide a short crash course at the beginning of the course and link supplementary training material.
Language: English, German	**Person responsible for module:** Prof. Dr. Julian Kunkel
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 20	

Georg-August-Universität Göttingen	5 C
Module M.Inf.1242: Seminar Databases	2 WLH

Learning outcome, core skills:	**Workload:**
Die Studierenden können sich in ein Spezialgebiet moderner Datenbank- und Informationssysteme einarbeiten, Quellen im Web suchen und in Beziehung zu dem behandelten Gebiet setzen, sowie in einer Diskussion darstellen und bewerten.	Attendance time: 28 h
Überblick über die Modulinhalte:	Self-study time: 122 h
Aktuelle Original-Arbeiten aus dem Bereich Datenbanken.	

Course: Seminar Datenbanken (Seminar)	2 WLH
Examination: Vortrag (ca. 60 Min.) mit schriftlicher Ausarbeitung (max. 15 Seiten) **Examination requirements:** Einarbeitung in ein Spezialgebiet moderner Datenbank- und Informationssysteme; Fähigkeit, Quellen im Web suchen und in Beziehung zu dem behandelten Gebiet zu setzen, sowie in einer Diskussion darzustellen und zu bewerten	5 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: German, English	**Person responsible for module:** Prof. Dr. Wolfgang May
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 30	

Georg-August-Universität Göttingen	6 C
Module M.Inf.1243: Deductive Databases	4 WLH

Learning outcome, core skills:	**Workload:**
Die Studierenden verfügen über vertiefte Kenntnisse der im Datenbankbereich zugrundeliegenden Theorie. Sie haben einen Einblick in die Möglichkeiten, die logikbasierte Ansätze und entsprechende deklarative Programmiersprachen über reine Datenverwaltung hinaus bieten, um Wissen zu repräsentieren und in intelligenten Anwendungen Schlüsse daraus zu ziehen (z.B. Answer Set Programming).	Attendance time: 56 h Self-study time: 124 h

Course: Deduktive Datenbanken (Lecture, Exercise)	4 WLH
Contents: Relationaler Kalkül, Datalog, Negation in Closed World, Disjunktives Reasoning, Stabile Modelle, Answer Set Programming.	

Examination: Klausur (90 Min.) oder mündliche Prüfung (ca. 25 Min.). **Examination requirements:** Vertiefte Kenntnisse der dem Datenbankbereich zugrundeliegenden Theorie. Praktische Anwendung logikbasierter Programmiersprachen.	6 C

Admission requirements: Datenbanken, Formale Systeme	**Recommended previous knowledge:** none
Language: German, English	**Person responsible for module:** Prof. Dr. Wolfgang May
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 50	

Georg-August-Universität Göttingen	5 C
Module M.Inf.1244: Seminar on optimal transport	2 WLH

Learning outcome, core skills:	Workload:
By using original references students will familiarize themselves with advanced aspects of optimal transport theory or its applications in modern data analysis and machine learning and present their findings to the other participants. • read and understand original research papers or graduate-level textbooks • collect background material on a given topic and its context • order and prioritize this material for a presentation • prepare a structured presentation with a corresponding handout • give an accessible presentation • answer questions from the audience that may go slightly beyond the presentation material • leading and participating in a scientific discussion	Attendance time: 28 h Self-study time: 122 h

Course: Seminar on optimal transport (Seminar)	2 WLH
Examination: Presentation (approx. 45 min.), follow-up discussion, and handout (max. 5 pages) **Examination requirements:** Advanced knowledge on a specific topic in optimal transport research; structured presentation; handout	5 C

Admission requirements:	Recommended previous knowledge:
none	Lecture "Computational optimal transport" or some course on optimization are strongly recommended.
Language: English	**Person responsible for module:** Prof. Dr. Bernhard Schmitzer
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 15	

Georg-August-Universität Göttingen **Module M.Inf.1250: Seminar: Software Quality Assurance**	5 C 2 WLH

Learning outcome, core skills: The students • learn to become acquainted with an advanced topic in software quality assurance by studying up-to-date research papers • gain knowledge about advanced topics in software quality assurance. The advanced topic may be related to areas such as test processes, software metrics, black-box testing, white-box testing, test automation, test generation and testing languages • learn to present and discuss up-to-date research on advanced topics in software quality assurance. • learn to assess up-to-date research on advanced topics in software quality assurance	**Workload:** Attendance time: 28 h Self-study time: 122 h

Course: Randomness and Software Testing (Seminar) *Contents*: Since exhaustive testing of software is almost never possible, different approaches towards the determination of appropriate test suites have been proposed throughout the years. One direction is to randomize the generation of software tests. This does not necessarily mean that there is no underlying strategy, the opposite is the case. The inputs and/or execution paths of software are created using probability distributions with the aim to optimize certain quality aspects of software. This seminar addresses topics from randomized software testing, including randomized selection of execution paths (e.g., through usage-based testing) and randomized generation of test data (e.g., using fuzzing). In addition to the techniques themselves, we also address how randomized approaches differ from traditional approaches based on coverage criteria and/or heuristics.	2 WLH
Examination: Presentation (approx. 45 minutes) and written report (max. 20 pages) **Examination prerequisites:** Attendance in 80% of the seminar presentations **Examination requirements:** The students shall show that • they are able to become acquainted with an advanced topic in software quality assurance by investigating up-to-date research publications • they are able to present up-to-date research on an advanced topic in software quality assurance • they are able to assess up-to-date research on an advanced topic in software quality assurance • they are able to write a scientific report on an advanced topic in software quality asssurance according to good scientific practice Presentation of an advanced topic in software engineering and written report.	5 C

Admission requirements: none	**Recommended previous knowledge:** Foundations of software engineering.
Language: English	**Person responsible for module:** Prof. Dr. Jens Grabowski
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 30	

| Georg-August-Universität Göttingen | 5 C |
| Module M.Inf.1251: Seminar: Software Evolution | 2 WLH |

Learning outcome, core skills:	**Workload:**
The students	Attendance time:
	28 h
• learn to become acquainted with an advanced topic in software evolution by studying up-to-date research papers	Self-study time:
	122 h
• gain knowledge about advanced topics in software evolution. The advanced topic may be related to areas such as comparison of software projects, defect analysis and prediction, version control and infrastructure, changes and clones, impact analysis, practical applications and experiments, patterns and models, as well as integration and collaboration (process-related and social aspects)	
• learn to present and discuss up-to-date research on advanced topics in software evolution	
• learn to assess up-to-date research on advanced topics in software evolution	

Course: Mining Software Repositories (Seminar)	2 WLH
Contents:	
The topics in this seminar on software evolution will include the following areas:	
• comparison of projects	
• defect analysis and prediction	
• version control and infrastructure	
• beyond source code - text analysis	
• search and recommendation	
• changes and clones	
• impact analysis	
• practical applications and experiments	
• available resources	
• visualization and presentation of results	
• patterns and models	
• integration and collaboration (process-related and social aspects)	

Examination: Presentation (approx.45 minutes) and written report (max. 20 pages)	5 C
Examination prerequisites:	
Attendance in 80% of the seminar presentations	
Examination requirements:	
The students shall show that	
• they are able to become acquainted with an advanced topic in software evolution by investigating up-to-date research publications	
• they are able to present up-to-date research on an advanced topic in software evolution	
• they are able to assess up-to-date research on an advanced topic in software evolution	
• they are able to write a scientific report on an advanced topic in software evolution according to good scientific practice	

Presentation of an advanced topic in software engineering (approx.45 minutes) and written seminar report (max. 20 pages)

Number of repeat examinations permitted: twice	**Recommended semester:**

Georg-August-Universität Göttingen	5 C
Module M.Inf.1261: Seminar Graphic Data Processing	2 WLH

Learning outcome, core skills:	**Workload:**
Die Studierenden sollen lernen, sich anhand von Originalarbeiten selbständig in aktuelle Themen der Grafischen Datenverarbeitung einzuarbeiten und den erarbeiteten Stoff vor einem kritischen Publikum vorzutragen. Hierzu gehört das gründliche Durcharbeiten und Beurteilen der betreffenden Originalarbeit sowie die Erarbeitung von Grundlagen, die für das Verstehen der Arbeit notwendig sind, dort aber aus Platzgründen nicht ausgeführt sind. Dabei sind im Allgemeinen weitere Originalarbeiten oder Lehrbücher heranzuziehen, die notwendig sind, um die gewählte Originalarbeit vollständig zu verstehen. Da im Vortrag nur ein Teil des erarbeiteten Stoffes dargestellt werden kann, ist eine sinnvolle Auswahl zu treffen. Die Unterscheidung zwischen wichtigen und weniger wichtigen Bestandteilen des erlernten Stoffes gehört zu den Aufgaben des Vortragenden. Es wird erwartet, dass der Vortragende nicht nur den vorgetragenen Stoff beherrscht, sondern auch Grundlagen dieses Stoffes, die im Vortrag aus Zeitgründen nicht behandelt werden konnten. Schließlich ist eine schriftliche Ausarbeitung des Vortrags zu erstellen.	Attendance time: 28 h Self-study time: 122 h

Course: Seminare beispielsweise zu den Themen Computergrafik, Bildanalyse, Auswertung von 3D-Daten, Mustererkennung, Modellierung und Rendering natürlicher Objekte. (Seminar) *Contents*: Aktuelle Forschungsarbeiten der Grafischen Datenverarbeitung (Computergrafik, Bildanalyse, Mustererkennung, Analyse von 3D-Daten)	
Examination: Vortrag (ca. 60 Min.) mit schriftlicher Ausarbeitung (max. 20 Seiten). **Examination requirements:** Selbständige Einarbeitung anhand von Originalarbeiten in aktuelle Themen der Grafischen Datenverarbeitung und Präsentation des erarbeiteten Stoffes einschließlich der Grundlagen die zum Verstehen des eigentlichen Themas notwendig sind.	5 C

Georg-August-Universität Göttingen	5 C
Module M.Inf.1291: Seminar Advanced Topics in Computer Security and Privacy	2 WLH

Learning outcome, core skills:	**Workload:**
On completion of the module, students should be able to:	Attendance time: 28 h
• Investigate selected research topics in computer security and privacy,	Self-study time: 122 h
• Identify existing solutions in the area to be investigated,	
• Explain, compare, and discuss these solutions,	
• Develop new ideas to improve the existing solutions,	
• Summarize their findings in a written report,	
• Give a presentation about the chosen area.	

Course: Seminar on Advanced Topics in Computer Security and Privacy (Seminar)	2 WLH
Examination: Presentation (approx. 30 minutes) and written report (max. 15 pages)	5 C
Examination requirements:	
The students shall show that:	
• They are able to conduct literature research on an advanced topic in computer security and privacy,	
• They are able to explain selected solutions related to the chosen topic,	
• They are able to compare these solutions by analyzing their potential advantages and limitations,	
• They are able to write a structured scientific report on their findings by respecting the rules of good scientific practice,	
• They are able to present and to critically discuss their findings in a presentation.	

Admission requirements:	**Recommended previous knowledge:**
none	Basic knowledge in computer security and privacy
Language:	**Person responsible for module:**
English	Prof. Dr. Delphine Reinhardt
Course frequency:	**Duration:**
irregular	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**
twice	
Maximum number of students:	
15	

Additional notes and regulations:

On completion of the module, students should be able to:

- Investigate selected topics in privacy in ubiquitous computing,
- Identify existing solutions in the area to be investigated,
- Explain, compare, and discuss these solutions,
- Develop new ideas to improve the existing solutions,

- Summarize their findings in a written report,
- Give a presentation about the chosen area.

Georg-August-Universität Göttingen **Module M.Inf.1303: Imaging and Visualization**	6 C 4 WLH

Learning outcome, core skills: The students • name and describe aims and typical tasks in medical imaging and image processing and explain the corresponding challenges. • name the relevant imaging techniques in medicine and explain their essential characteristics. • describe essential mathematical and physical contexts - on an appropriate level - which are the basis for the introduced imaging techniques. • name and describe established memory formats, transfer processes, and compression technologies for medical imaging data and substantiate reasons for their implementation. • explain the fundamentals of image enhancement in time and frequency domain. • explain essential processes in image segmentation and description. • explain fundamentals of object identification and classification. • apply the theoretical fundamentals in practical use cases with established software tools.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Imaging and Visualization (Block course, Lecture, Exercise, Seminar) *Contents*: Radiological, nuclear-medicine, and optical procedures in medicine; requirements and legal frameworks, image formats, transfer and storage, compression; digital image representation, processing chain, resolution and contrast, contrast enhancement, noise reduction, filter techniques; detection of points, lines, edges, and segments, threshold and area-oriented operations, feature extraction; use of tools such as Python, Matlab, OpenCV. The contents are adjusted to current developments. Literature is indicated at the start of each semester.	4 WLH
Examination: Written Evaluation (Klausur), E-Assessment resp. (120 minutes.) or oral evaluation (ca. 30 minutes.) **Examination prerequisites:** Regular attendance in seminar dates.	6 C

Examination requirements: In the evaluation, the theoretical knowledge of essential terms and methods as well as their choice, implementation, and assessment is tested in case examples. In written evaluations and e-assessments, tasks are generally given in open questions and are to be answered accordingly, other question types (such as MC) may be used in minor part.	

Admission requirements: none	**Recommended previous knowledge:** Students are expected to have sound knowledge in fundamentals of mathematics.
Language: English, German	**Person responsible for module:** Prof. Dr. rer. nat. Dagmar Krefting

	Prof. Dr. Ulrich Sax
Course frequency: once a year	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1 - 3
Maximum number of students: 25	

| Georg-August-Universität Göttingen | 6 C |
| Module M.Inf.1304: E-Health | 4 WLH |

Learning outcome, core skills:	Workload:
Die Studierenden können die verschiedenen Kommunikationsstandards im Gesundheitswesen beschreiben und bewerten. Sie können die bisherige Entwicklung dieser Standards beschreiben und zukünftige Herausforderungen und Potentiale von Standards darlegen. Die Studierenden können die Bedeutung der Standards in der aktuellen Forschung beschreiben.	Attendance time: 56 h Self-study time: 124 h
Die Studierenden können die wesentlichen rechtlichen Rahmenbedingungen der E-Health benennen. Sie können die Bedeutung der nationalen und internationalen Verordnungen und Gesetze erläutern und geeignete Beispiele nennen.	
Die Studierenden können die Auswirkungen der E-Health auf die traditionelle Organisationsform des deutschen Gesundheitswesens beschreiben und Chancen und Herausforderungen der digitalen Transformation erläutern.	

Course: E-Health (Block course)	4 WLH
Contents: Kommunikationsstandards im Gesundheitswesen und deren bisherige und zukünftige Entwicklung; Bedeutung der Standards in der aktuellen Forschung; rechtliche Rahmenbedingungen der E-Health (nationale und internationale Verordnungen und Gesetze); Auswirkungen der E-Health auf das deutsche Gesundheitswesen; Chancen und Herausforderungen der digitalen Transformation; weitere Inhalte nach aktueller Entwicklung. Literaturempfehlungen werden zu Beginn des Semesters ausgegeben.	

Examination: Klausur bzw. E-Prüfung (90 Min.) oder mündliche Prüfung (ca. 20 Min.) (50%); Seminararbeit (min. 10 bis max. 20 Seiten) (25%) und Seminarvortrag (30 bis max. 45 Minuten) (25%). Examination prerequisites: Teilnahme an den Blockseminarterminen.	6 C

Examination requirements:
In der Prüfung wird neben dem theoretischen Verständnis zentraler Begriffe und Methoden deren Auswahl, Einsatz und Überprüfung anhand von Fallbeispielen nachgewiesen. Lernziele werden zu jeder Lehreinheit ausgegeben. Prüfungsanforderungen werden in der Lehrveranstaltung durch geeignete Übungsaufgaben und/oder Repetitorien vermittelt. In Klausuren bzw. E-Prüfungen sind grundsätzlich offene Fragen in Textform zu bearbeiten, weitere Fragetypen (z. B. MC) sind in geringem Umfang möglich. Prüfungsanforderungen in Seminarvorträgen und Hausarbeiten sind einer schriftlichen Aufgabenstellung zu entnehmen, Bewertungskriterien werden zu Beginn des jeweiligen Semesters ausgegeben.

Admission requirements:	Recommended previous knowledge:
keine	keine
Language:	**Person responsible for module:**

| Module M.Inf.1307: Current Topics in Medical Informatics | 4 WLH |

Learning outcome, core skills:	**Workload:**
The students	Attendance time:
	56 h
• name and describe topics in medical informatics, which are of major importance for the future development of the field.	Self-study time:
• explain, discuss, and substantiate said importance.	124 h
• reflect on a topic and analyze it by means of literature research.	
• conduct topic-related assignments and case examples.	
• present and discuss their results.	

Course: Current Topics in Medical Informatics (Block course, Lecture, Exercise, Seminar)	4 WLH
Contents:	
The contents are adjusted to current developments of the field. Examples: clinical decision support, assistive health care technologies, advanced technologies and methods of data analysis and data quality management, machine learning, semantic analysis of medical data models. The seminar can be conducted as an online course.	

Examination: Seminar paper (max. 20 pages) (60%) and presentation (ca. 20 minutes) (40%) or e-assessment in the online-course (100 %)	6 C
Examination prerequisites:	
Regular participation in the seminar.	

Examination requirements:	
Detailed coverage of a current topic in medical informatics in accordance with the learning aims. Requirements of seminar presentations and papers are specified in assignments, as are requirements in the e-assessment. Grading criteria are conveyed at the start of each semester.	

Admission requirements:	**Recommended previous knowledge:**

Georg-August-Universität Göttingen	3 C
Module M.Inf.1308: Journal Club	2 WLH

Learning outcome, core skills:	**Workload:**
The students - conduct their own research of current scientific journal publications in a given area of medical informatics. - choose relevant publications and justify their choice. - research background information on publication sources and authors and put it into the scientific context of the given area of the field. - read, present, assess, and discuss scientific publications.	Attendance time: 28 h Self-study time: 62 h

Course: Journal Club (Seminar) *Contents*: Contents are adjusted to the current development of the field.	2 WLH
Examination: Two seminar presentations (ca. 30 minutes each) (40% each) and active participation in the discussions of papers presented by other candidates (20%). **Examination prerequisites:** Evidence of active participation in at least 12 seminar dates.	3 C

Examination requirements: Evidence of acquired, field-specific competencies through critical examination of relevant publications. Requirements of seminar presentations are specified in assignments. Grading criteria are conveyed at the start of each semester.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. rer. nat. Dagmar Krefting Prof. Dr. Ulrich Sax
Course frequency: each semester	**Duration:** 2 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1 - 3
Maximum number of students: 25	

Georg-August-Universität Göttingen	5 C
Module M.Inf.1351: Work Methods in Health Research	3 WLH

Learning outcome, core skills:	**Workload:**
The students...	Attendance time:
	42 h
• name and explain methods, structures, and aims of collaborative research organizations and explain their impact on global health research and health care.	Self-study time: 108 h
• explain collaborative work methods in academic projects.	
• explain the role of individual actors in collaborative research.	
• describe the structure and organization of German and European scientific community in societies and associations and explain the benefit of said organization for (international) research as well as their own personal benefits.	
• demonstrate said competencies in a seminar assignment.	

Course: Mögliche Lehrformen: Vorlesung, Übung, Seminar, Blockseminar	3 WLH
Contents: Clinical Research Units, Collaborative Research Centers, German Centers for Health Research, TMF, GMDS, EFMI, IMIA. Tools for collaborative work, team-building, maintaining a team, self-assessment. The contents are continuously adjusted to current developments of the field. Sources are recommended at the beginning of each term.	

Examination: Seminar paper (max. 10 pages) and seminar presentation (approx. 20 minutes)	5 C
Examination prerequisites: regelmäßige Teilnahme bei Blockseminaren und bei Seminaren	
Examination requirements: The students describe, explain, and assess selected aspects of collaborative health research in detail. This may be based on literature or individual research. The student work may address a specific aspect of collaborative research or analyze actual collaborative work designs. Students may work in teams. They make use of suitable literature and acquire further sources. They document their results in a seminar paper (ten pages maximum) and present their results in the seminar (20 minutes). Requirements are specified in an assignment sheet. Detailed grading criteria are conveyed at the start of each semester.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: English, German	**Person responsible for module:** UnivProf. Dr. rer. nat. Ulrich Sax Prof. Dr. Dagmar Krefting
Course frequency: once a year	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1 - 2
Maximum number of students:	

25	

Georg-August-Universität Göttingen **Module M.Inf.1355: IT-Management Techniques in Health Care**	10 C 8 WLH

Learning outcome, core skills: The students… • describe methods as well as technical, organizational and human aspects of knowledge management. • explain the importance of knowledge management for productivity and competition in life sciences and health care. • discuss the fundamentals of business administration with respect to the employment of IT in health care. • explain the potentials of usage and development of IT in health care. • build on their acquired competencies to analyze practical challenges of project management in a specialized area or use case. They assess the impact of said aspects on the potential success of projects.	**Workload:** Attendance time: 112 h Self-study time: 188 h

Course: IT-Management-Techniques in Health Care (Block course, Lecture, Seminar) *Contents*: • Economic Aspects of IT-Investments in Health Care: Fundamentals of Business Administration, Sustainability, TCO, ROI, Clinical Pathways, outpatient management, and health care IT. • Knowledge Management: History of knowledge management, forms and dimensions of knowledge, SECI- and circular models, tools for knowledge management, personal knowledge management, knowledge management and content management, knowledge management in medical informatics and from a physician's viewpoint, impact of knowledge management on health care. • Special Aspects of Project Management in Health Care: Models, tools, and phases of project management, risks, challenges, stakeholders, communication, and quality management in project management. The contents are continuously adjusted to current developments of the field. Sources are recommended at the beginning of each term.	8 WLH
Examination: Written exam (Klausur), online-exam respectively (90 minutes) or oral exam (approx. 20 minutes), seminar paper (max. 15 pages), seminar presentation (approx. 30 minutes). **Examination prerequisites:** none	10 C
Examination requirements: The students demonstrate their command and grasp of fundamental terms and methods in IT-management. They can describe and explain the choice, use, and assessment of management methods. They discuss said methods and their employment in the context of exemplary use cases. Requirements for seminar papers and presentations are specified in assignment sheets. Detailed grading criteria are conveyed at the start of each semester. In written evaluations and online tests, mostly open questions will	

be posed that are to be answered in free text. Other question types, such as Multiple Choice, are possible to a lesser extent.

Admission requirements: none	Recommended previous knowledge: Prior successful attendance of module B.Inf.1304 is recommended, or an equivalent of prerequisite knowledge in fundamentals of project management.
Language: English, German	Person responsible for module: UnivProf. Dr. rer. nat. Ulrich Sax Prof. Dr. Dagmar Krefting
Course frequency: once a year	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: 1 - 3
Maximum number of students: 25	

Georg-August-Universität Göttingen **Module M.Inf.1356: Infrastructures for Clinical Research**	9 C 8 WLH

Learning outcome, core skills: Die Studierenden kennen die Grundlagen der Bioinformatik und Biostatistik. Sie kennen die wichtigsten Methoden und Werkzeuge in der Analyse von Hochdurchsatzdaten. Die Studierenden lernen die Grundlagen und Prinzipien der Planung, Durchführung und Analyse klinischer Studien kennen. Sie sind vertraut mit Planungssoftware für klinische Studien. Sie lernen, wie Metaanalysen mit geeigneter Software auszuführen sind. Die Studierenden kennen die Ziele, Methoden, Anwendungen und Entwicklungen einer personalisierten Medizin. Sie können diese in Bezug auf exemplarische Felder in Forschung und Versorgung erläutern. Die Studierenden lernen die interdisziplinäre Bedeutung der Bioinformatik, Biostatistik und Medizininformatik kennen und können diese im Kontext von Forschung und Versorgung darstellen.	**Workload:** Attendance time: 112 h Self-study time: 158 h

Course: Personalisierte Medizin (Lecture) *Contents*: Die Studierenden kennen die Ziele, Methoden, Anwendungen und Entwicklungen einer personalisierten Medizin. Sie können diese in Bezug auf exemplarische Felder in Forschung und Versorgung erläutern.	2 WLH
Course: Grundlagen der Biostatistik und Bioinformatik (Block course) *Contents*: Die Studierenden kennen die Grundlagen der Bioinformatik und Biostatistik. Sie kennen die wichtigsten Methoden und Werkzeuge in der Analyse von Hochdurchsatzdaten.	2 WLH
Course: Klinische Studien (Lecture, Exercise) *Contents*: Die Studierenden lernen die Grundlagen und Prinzipien der Planung, Durchführung und Analyse klinischer Studien kennen. Sie sind vertraut mit Planungssoftware für klinische Studien. Sie lernen, wie Metaanalysen mit geeigneter Software auszuführen sind.	4 WLH
Examination: 2 Klausuren bzw. E-Prüfungen (je 90 Minuten, je 50% der Modulnote) oder mündliche Prüfung (ca. 45 Minuten)	9 C

Examination requirements: Die Studierenden zeigen ihr Verständnis der Planung, Durchführung und Analyse klinischer Studien. Sie können die Vor- und Nachteile verschiedener Studiendesigns in einem gegebenen Kontext kritisch bewerten. Sie können eine Studienplanung mit geeigneter Software durchführen. Sie beherrschen die Metaanalyse einer randomisierten, kontrollierten Studie in Bezug auf deren Biases und Heterogenität und können die Ergebnisse interpretieren. Die Studierenden beschreiben die Ziele, Methoden, Anwendungen und Entwicklungen einer personalisierten Medizin. Sie können die interdisziplinäre Bedeutung des Themas darstellen und Anwendungsfelder der personalisierten Medizin in Forschung und Versorgung exemplarisch erläutern. Die Studierenden können die Potentiale und	

Herausforderungen des behandelten interdisziplinären Forschungsgebietes kritisch bewerten.

Admission requirements:	Recommended previous knowledge:
none	Der vorherige Besuch des Moduls B.Inf.1351: Grundlagen der Biomedizin oder einer vergleichbaren Lehrveranstaltung wird dringend empfohlen.
	Der vorherige Besuch des Moduls B.Mat.0804: Diskrete Stochastik bzw. des Moduls B.Mat.1420: Grundlagen der Stochastik oder einer vergleichbaren Lehrveranstaltung wird dringend empfohlen.
Language: English, German	**Person responsible for module:** Prof. Dr. Tim Friede Prof. Dr. Ulrich Sax, Prof. Dr. Dagmar Krefting
Course frequency: once a year	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1 - 3
Maximum number of students: 25	

Georg-August-Universität Göttingen **Module M.Inf.1403: Neurorehabilitation Technologies: Introduction and Applications**	5 C 3 WLH

Learning outcome, core skills: Students are able to describe the state of the art in Neurorehabilitation technologies and understand the basics of the related physiological processes. In addition, they are in a position to discuss and evaluate current trends as well as to recognize limitations of available assistive and rehabilitative technology. The exercise allows students to understand basic concepts of programming in the MATLAB environment. By utilizing the acquired set of theoretical and programming skills they are fit to address variety of practical Neurorehabilitation challenges.	**Workload:** Attendance time: 42 h Self-study time: 108 h

Course: Neurorehabilitation Technologies: Introduction and Applications (Lecture, Exercise) Literature suggestion will be handed out at the beginning of each term.	3 WLH

Examination: Written exam (90 min.) or presentation (approx. 25 min.) and written report (max. 10 pages)
Examination prerequisites:
Successful completion of 50% of each exercise.
Examination requirements:
- Basic motor physiology
 	
- The state of the art of Neurorehabilitation technologies
 	
   • Invasive and non-invasive muscle/nerve electrode systems
   • Upper limb related technologies
   • Lower limb related technologies
   • Brain Computer Interfaces
   • Feedback for sensory-motor integration and closed loop control
   • Selected topics on advanced Neurorehabilitation technologies and applications
	5 C

Admission requirements: none	**Recommended previous knowledge:** Basic programming skills; basic algebra
Language: English	**Person responsible for module:** Prof. Dr. Dario Farina
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 16	

Georg-August-Universität Göttingen	6 C
Module M.Inf.1501: Data Mining in Bioinformatics	4 WLH

Learning outcome, core skills:	Workload:
Students will learn methods for analyzing multidimensional data, which play a crucial role in the study of biological systems. The aim is to understand the special properties of high-dimensional spaces and the statistical methods that can make structures in complex data accessible. Criteria for the selection and applicability of different methods should be understood in theoretical and practical aspects.	Attendance time: 56 h Self-study time: 124 h

Course: Data Mining in der Bioinformatik (Lecture)	2 WLH
Course: Rechnerübung zu Data Mining in der Bioinformatik (Block course)	2 WLH
Examination: Oral examination (approx. 20 minutes)	6 C

Examination requirements:
After completing the module, the students should be able to independently understand and apply methods for analyzing complex data and to critically assess the limits of applicability.

Admission requirements:	Recommended previous knowledge:
none	Algorithms in Bioinformatics, Machine Learning in Bioinformatics
Language: German, English	**Person responsible for module:** Dr. Peter Meinicke
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 15	

Georg-August-Universität Göttingen	5 C
Module M.Inf.1503: Seminar Bioinformatics	2 WLH

Learning outcome, core skills:	**Workload:**
Die Studierenden sollen lernen sich anhand von Originalarbeiten selbstständig in aktuelle Themen der Bioinformatik einzuarbeiten und den erarbeiteten Stoff vor einem kritischen Publikum vorzutragen. Hierzu gehört das gründliche Durcharbeiten und Beurteilen der betreffenden Originalarbeit sowie die Erarbeitung von Grundlagen, die für das Verstehen der Arbeit notwendig sind, dort aber aus Platzgründen nicht ausgeführt sind. Dabei sind im allgemeinen weitere Originalarbeiten oder Lehrbücher heranzuziehen, die notwendig sind, um die gewählte Originalarbeit vollständig zu verstehen und die gewonnenen Erkenntnisse anwenden zu können.	Attendance time: 28 h Self-study time: 122 h

Course: Literaturseminar Bioinformatik (Seminar)	2 WLH
Contents: Aktuelle Forschungsarbeiten der Bioinformatik	
Examination: Vortrag (ca. 60 Min.) mit schriftlicher Ausarbeitung (max. 10 Seiten)	5 C

Examination requirements:	
Da im Vortrag nur ein Teil des erarbeiteten Stoffs dargestellt werden kann, ist eine sinnvolle Auswahl zu treffen. Die Unterscheidung zwischen wichtigen und weniger wichtigen Bestandteilen des erlernten Stoffs gehört zu den Aufgaben des Vortragenden. Es wird erwartet, dass der Vortragende nicht nur den vorgetragenen Stoff beherrscht, sondern auch Grundlagen dieses Stoffs, die im Vortrag aus Zeitgründen nicht behandelt werden konnten. Schließlich ist eine schriftliche Zusammenfassung des Vortrags zu erstellen und eine exemplarische Anwendung zu dokumentieren. Die Prüfungs besteht aus Vortrag mit schriftlicher Ausarbeitung inkl. Dokumentation einer Anwendung.

Georg-August-Universität Göttingen **Module M.Inf.1804: Practical Course in Software Quality Assurance**	6 C 4 WLH

Learning outcome, core skills: The students - learn to become acquainted with up-to-date methods and software tools for software quality assurance - learn to select methods and tools for given practical problems in software quality assurance - learn to apply methods and tools for given practical problems in software quality assurance - learn to assess methods and tools for given practical problems in software quality assurance by performing experiments	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Practical Course on Software Evolution: Origin Analysis (Practical course) *Contents*: Changes in the usage requirements and the technological landscape, among others, drive a continuous necessity for changes in software systems in order to sustain their existence and operability in changing environments. Origin analysis aims to determine the location of points of interest through time. For example, origin analysis aids on the one hand projecting the location of past changes into the current state of the code base, and on the other hand determining previous locations and origins of detected issues. In this course, we will build and extend an existing infrastructure for performing origin analysis and use it to perform studies on large software systems, such as Google Chrome, Mozilla Firefox, Amarok, and others.	4 WLH
Examination: Practical exercises in small groups (approx. 4-6 exercises) and oral examinations for the exercises (approx. 15 minutes each), not graded **Examination prerequisites:** Attendance in 90% of the classes **Examination requirements:** The students shall show that - they are able to become acquainted with with up-to-date methods and software tools for software quality assurance - they are able to select methods and tools for given practical problems in software quality assurance - they are able to to apply methods and tools for given practical problems in software quality assurance - they are able to to assess methods and tools for given practical problems in software quality assurance by performing experiments	6 C

Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 15	

Georg-August-Universität Göttingen **Module M.Inf.1823: Team Practical Course for Research-Related Software Projects**	12 C 8 WLH

Learning outcome, core skills: The students • gain practical experience in the selection and application of state-of-the-art software engineering methods and tools • gain practical experience in the selection and application of state-of-the-art software quality assurance methods and tools • gain practical experience in larger scale software concepts and architectures • gain practical experience in software projects • learn how to work in teams of 4 to 6 persons • gain experience in fulfilling different roles in software engineering • learn how to design and implement state-of-the-art user interfaces • learn how to explore and become acquainted with state-of-the-art user interface and other core technologies	**Workload:** Attendance time: 112 h Self-study time: 248 h

Course: Practical Course on GUI, AR, and VR Development in Teams (Practical course) *Contents*: In this course, teams of 4 to 6 students develop GUI, AR, or VR focused software. The software itself shall serve scientific purposes and shall be developed in the context of a scientific project. The course spans over the full semester and not only the lecture period. In weekly meetings, one member of each team has to present the current state of the project. In the last session of the semester, the students give an overall project presentation and hand in a final report. The report shall be structured similar to scientific papers covering research questions, foundations, related work, descriptions of the approaches, a case study, and a discussion of the results. Depending on the concrete course, the students will learn how to use state-of-the-art technologies for either GUI, AR, or VR development, such as Java Swing, HTML/CSS/JavaScript, Unity3D, or the Unreal Engine. In addition, the students shall apply their knowledge on software engineering and software quality assurance.	8 WLH

Examination: Active participation in practical tasks in small groups as well as presentation and reporting of task results **Examination prerequisites:** Attendance in 90% of the mandatory classes **Examination requirements:** The students shall show to be able to • select and apply state-of-the-art software engineering methods and tools • select and apply state-of-the-art software quality assurance methods and tools • construct larger software architectures • work in teams and fulfil different roles in software engineering • design and implement state-of-the-art user interfaces	12 C

- explore and become acquainted with state-of-the-art user interface and other core technologies

Admission requirements:	Recommended previous knowledge:
none	Foundations in Software Engineering and Software Quality Assurance
Language:	**Person responsible for module:**
English	Prof. Dr. Jens Grabowski
Course frequency:	**Duration:**
unregelmäßig	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**
twice	
Maximum number of students:	
15	

Georg-August-Universität Göttingen **Module M.Inf.1824: Practical Course on Computer Security and Privacy**	6 C 4 WLH

Learning outcome, core skills: On completion of the module, students should be able to: • Identify and understand existing solutions in the area to be investigated, • Design and implement a new approach to improve the investigated existing solutions, • Present their chosen approach in a written report justifying their design decisions and implementation choices as well as clearly document their implementation, • Give a presentation about their implemented approach.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Lab Computer Security and Privacy (Practical course)	4 WLH

Examination: Presentation (approx. 30 minutes) and written report (max. 15 pages) **Examination requirements:** The students shall show that: • They are able to conduct literature research and analyse the design space of a chosen topic, • They are able to make design decisions based on this analysis, • They are able to design and implement an approach improving the current state-of-the-art, • They are able to write a structured scientific report on their design decisions and the resulting solution by respecting the rules of good scientific practice, • They are able to present and to critically discuss their implemented solution in a presentation.	6 C

Admission requirements: none	**Recommended previous knowledge:** Backgrounds in Computer Security and Privacy
Language: English	**Person responsible for module:** Prof. Dr. Delphine Reinhardt
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 20	

Georg-August-Universität Göttingen	6 C
Module M.Inf.1825: Blockchain Technology	2 WLH

Learning outcome, core skills:	**Workload:**
The students:	Attendance time:
	28 h
• are familiar with the basic concepts of blockchain technology	Self-study time:
• know how to methodically read and analyse scientific research papers	152 h
• have enriched their practical skills in computer networks with regards to blockchain	
• know about practical deployability issues of blockchain	
• have improved their ability to work independently in a pre-defined context	

Course: Introduction to Blockchain Technology (Practical course)	2 WLH
Examination: Group project report (max. 15 pages) and presentation (approx. 20 min.)	6 C
Examination requirements:	
Advanced knowledge in blockchain technology; understanding of broader implications of blockchain technology; knowledge about blockchain privacy and security; ability to transfer the theoretical knowledge to practical exercises; ability to present the earned knowledge in a proper in a written report.	

Admission requirements:	**Recommended previous knowledge:**
none	Basic knowledge in computer networks; basics of algorithms and data structures; advanced programming skills
Language:	**Person responsible for module:**
English	Prof. Dr. Dieter Hogrefe
Course frequency:	**Duration:**
irregular	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**
twice	
Maximum number of students:	
30	

Georg-August-Universität Göttingen **Module M.Inf.1826: Advanced topics of Blockchain Technology**	6 C 2 WLH

Learning outcome, core skills:	Workload:
The students: - are familiar with the advanced concepts of blockchain technology - know how to methodically read and analyze scientific research papers - have enriched their practical skills in computer networks with regards to blockchain and related concepts - know about practical deployability issues of blockchains - basic knowledge on privacy and security issues of blockchains - can work and manage a group project independently	Attendance time: 28 h Self-study time: 152 h

Course: Advanced topics of Blockchain Technology (Practical course)	2 WLH
Examination: Group project report (max. 15 pages) and presentation (approx. 20 min.) **Examination requirements:** Basic knowledge in blockchain technology; ability to transfer the theoretical knowledge to practical exercises; ability to present the earned knowledge in a proper in a written report	6 C

Admission requirements: M.Inf.1825	Recommended previous knowledge: Advanced knowledge in computer networks; basics of algorithms and data structures; advanced programming skills, basic knowledge on blockchain technology
Language: English	**Person responsible for module:** Prof. Dr. Dieter Hogrefe
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 30	

Georg-August-Universität Göttingen	6 C
Module M.Inf.1827: Practical Course on Linked Data and Semantic Web	4 WLH

Learning outcome, core skills:	Workload:
Die Studierenden verfügen über vertiefte Kenntnisse und Erfahrungen mit Konzepten und Sprachen aus dem Bereich RDF, OWL und Linked Data. Sie wissen, welche Sprachen und Werkzeuge ggf. bei Problemstellungen anwendbar sind und können Projekte in diesem Bereich umsetzen. Vermittlung von praktischen Fähigkeiten aus dem Bereich RDF, OWL, LOD, SPARQL, Web Services und weiteren Sprachen und Werkzeugen.	Attendance time: 56 h Self-study time: 124 h

Course: Praktikum Linked Data und Semantic Web (Internship)	
Examination: Praktische Prüfung (ca. 4 Übungs- und Programmieraufgaben) und mündliche Prüfung (ca. 20 Min.) **Examination requirements:** Vertiefte Kenntnisse und Erfahrungen in Sprachen aus dem Bereich des Semantic Web. Kenntnisse darüber, welche Sprachen und Werkzeuge ggf. bei Problemstellungen anwendbar sind; Fähigkeit zum Umsetzen von Projekten in diesem Bereich.	6 C

Admission requirements:	Recommended previous knowledge:
none	none
Language: German, English	**Person responsible for module:** Prof. Dr. Wolfgang May
Course frequency: unregelmäßig	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 50	

Georg-August-Universität Göttingen	6 C
Module M.Inf.1828: Lab Usable Security and Privacy	4 WLH

Learning outcome, core skills:	**Workload:**
On completion of the module, students should be able to: • Identify, understand, and analyze usability issues in the field of security and privacy, • Design, plan, and conduct a user study to explore a selected issue by following the data protection regulations and taking into account ethical aspects, • Document, analyze, and critically discuss the obtained results, • Propose future improvements or directions based on the obtained results, • Present the study design, methodology, results, and consequences in a written report, • Give a presentation about their study and the associated findings.	Attendance time: 56 h Self-study time: 124 h

Course: Lab Usable Security and Privacy (Practical course)	4 WLH

Examination: Presentation (approx. 20 min.) und written report (max. 15 pages) **Examination requirements:**	6 C
The students shall show that: • They are able to conduct literature research and analyse the issues related to the usability of security and privacy solutions, • They are able plan and conduct a user study from its design to the processing and presentation of the results, • They are able to write a structured scientific report on their study including its design and the obtained results by respecting the rules of good scientific practice and data protection regulations, • They are able to present both their study and the associated results as well as critically discuss them in a presentation.	

Admission requirements:	**Recommended previous knowledge:**
none	Basic knowledge of privacy and usability obtained, e.g., in the recommended lecture "Usable Security and Privacy"
Language: English	**Person responsible for module:** Prof. Dr. Delphine Reinhardt
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 20	

Georg-August-Universität Göttingen	6 C
Module M.Inf.1829: Practical course in High-Performance Computing	4 WLH

Learning outcome, core skills:	**Workload:**
This practical course is comprised of two parts: firstly, a crash course on the basics of High-Performance Computing is delivered during a one-week tutorial. In a hands-on experience, it covers the theoretical knowledge regarding parallel computing, high-performance computing, supercomputers, and the development and performance analysis of parallel applications. Practical demonstrations encourage you to utilize the GWDG cluster system to execute existing parallel applications, to start developing your own parallel application using MPI and OpenMP, and to analyze the performance of these applications to ensure they run efficiently.	Attendance time: 56 h Self-study time: 124 h
During this week, we will use group works and small exercises to foster the training.	
We will start forming a learning community that will blend into the second part of the course.	
Equipped with this experience, in the second part, you will team up in groups of two and parallelize a non-trivial problem of your choice. Firstly, you will decide upon a problem you like to solve, then you create a sequential solution to this problem, and lastly, you apply the experience of the block course to parallelize and analyze the scalability of the application.	
The results will be shared with the peers in a presentation at the end of the term, and documented in a report - these components will be assessed and marked.	
The students will be able to	
- Construct parallel processing schemes from sequential code using MPI and OpenMP - Justify performance expectations for code snippets - Sketch a typical cluster system and the execution of an application - Characterize the scalability of a parallel application based on observed performance numbers - Analyze the performance of a parallel application using performance analysis tools - Describe the development and executions models of MPI and OpenMP - Construct small parallel applications that demonstrate features of parallel applications - Demonstrate the usage of an HPC system to load existing software packages and to execute parallel applications and workflows - Demonstrate the application of software engineering concepts	

Course: Practical course in High-Performance Computing (Block course)	4 WLH
Examination: Presentation (approx. 15 min.) and report (max. 15 pages) for the own project **Examination prerequisites:** Participation in the block seminar **Examination requirements:**	6 C

Successful completion of the own project	

Admission requirements:	Recommended previous knowledge:
none	• Programming experience in C++, C or Python • Parallel programming concepts • Linux
Language: English, German	**Person responsible for module:** Prof. Dr. Julian Kunkel
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 40	

Georg-August-Universität Göttingen	6 C
Module M.Inf.1830: Practical Course FPV Quadcopter - Basics	4 WLH

Learning outcome, core skills:	**Workload:**
Nach Abschluss des Seminars sollen die Teilnehmer*innen sind in der Lage sein, Quadcopter zu:	Attendance time: 56 h
• Entwerfen	Self-study time: 124 h
• Programmieren	
• Konstruieren	
• Tunen	
• Fliegen	

Course: Praktikum FPV Quadcopter - Grundlagen (Internship)	4 WLH
Contents:	
• Funktionsweise von Quadcoptern (Theorie und Praxis)	
• Konstruktion und Realisierung	
• Entwurf (auch mittels CAD Software)	
• Fertigung des Entwurfs (inkl. Löten, 3D-Druck etc.)	
• Programmierung des FC (flight controller)	
• PID Tuning und Ähnliches	
• Steuerung im ANGLE & ACRO Mode	
• Fliegen am Simulator und in der Realität auf einem anspruchsvollen Track	
Weitere Themen werden nach Bedarf der jeweiligen Quadcopterprojekte behandelt, etwa autonomes Fliegen, KI-gestützte Bildverarbeitung, long-range Flugtechnik, Löttechnik, spezielle 3D-Druck Techniken, Entwicklung Autopilot, betaflight Firmware etc.	
Weitere Details sowie ein Kursvideo finden Sie auf der Webseite zum Seminar: www.gipplab.org/teaching.	

Examination: Oral examination (approx. 20 minutes)	6 C
Examination requirements:	
Die folgenden Themen werden in einer mündlichen Prüfung abgeprüft:	
• Funktionsweise von Quadcoptern (Theorie und Praxis)	
• Konstruktion und Realisierung	
• Entwurf (auch mittels CAD Software)	
• Fertigung des Entwurfs (inkl. Löten, 3D-Druck etc.)	
• Programmierung des FC (flight controller)	
• PID Tuning und Ähnliches	
• Steuerung im ANGLE & ACRO Mode	
• Fliegen am Simulator und in der Realität auf einem anspruchsvollen Track	

Admission requirements:	**Recommended previous knowledge:**
none	none

Language:	**Person responsible for module:**
German	Prof. Dr. Bela Gipp

Course frequency:	Duration:
each winter semester	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**
twice	
Maximum number of students:	
9	

Additional notes and regulations:

Teilnehmer*innen können neben vorgegebenen Projekten auch ihre eigenen Ideen mit fachkundiger Unterstützung umsetzen. Die benötigten Bauteile, Geräte und Materialien werden vom Lehrstuhl gestellt.

Neben diesem Grundlagenkurs bietet der Lehrstuhl jeweils im Sommersemester auch einen fortgeschrittenen Kurs an.

Georg-August-Universität Göttingen	6 C
Module M.Inf.1831: High-Performance Computing System Administration	4 WLH

Learning outcome, core skills:	Workload:
- Discuss theoretic facts related to networking, compute and storage ressources - Integrate cluster hardware consisting of multiple compute and storage nodes into a "supercomputer" - Configure system services that allow the efficient management of the cluster hardware and software including network services such as DHCP, DNS, NFS, IPMI, SSHD - Install software and provide it to multiple users - Compile end-user applications and execute it on multiple nodes - Analyze system and application performance using benchmarks and tools - Formulate security policies and good practice for administrators - Apply tools for hardening the system such as firewalls and intrusion detection - Describe and document the system configuration	Attendance time: 56 h Self-study time: 124 h

Course: Practical Course on HPC System Administration (Practical course)	4 WLH
Contents: Students will learn in a one week block course the basics and create a small cluster system using provided hardware. Then they will collaborate in teams to setup individual services and present their results.	

Examination: written report (max. 15 pages; without appendix) **Examination requirements:** See the learning objectives above.	6 C

Admission requirements: none	Recommended previous knowledge: Linux Basics (you have used Linux and the Bash shell). We will provide a short crash course at the beginning of the course and link supplementary training material.
Language: English, German	**Person responsible for module:** Prof. Dr. Julian Kunkel
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 40	

Georg-August-Universität Göttingen **Module M.Inf.2102: Advanced Statistical Learning for Data Science**	6 C 4 WLH

Learning outcome, core skills: Students will • learn concepts of advanced statistical methods and their scope of applications. These methods comprise the EM algorithm, Markov models, Hidden Markov Models, Markov chain Monte Carlo. • gain a solid understanding of ensemble learning algorithms. In particular, we will address additive tree approaches like boosting and Random Forest algorithms, as well as methods for ensemble optimization • learn strategies for model assessment and selection such as nested cross-validation, Monte Carlo validation, or permutation tests. Moreover, this will comprise measures of model quality and robustness. • acquire practical experience in the interpretation of machine learning models and learn required methods for feature selection, importance, stability, and robustness • learn techniques of statistical network inference, their implementation as well as their application to high-dimensional data.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Advanced Statistical Learning for Data Science (Lecture) Hastie, et al. Elements of Statistical Learning https://web.stanford.edu/~hastie/ElemStatLearn/ Bishop: Pattern Recognition and Machine Learning. https://cs.ugoe.de/prml	2 WLH
Examination: Written exam (90 min) or oral exam (approx. 20 min) **Examination prerequisites:** M.Inf.2102.Ex: At least 50% of homework exercises solved. **Examination requirements:** Knowledge of advanced statistical methods, ensemble learning, model assessment, and interpretation as well as statistical network inference. Evaluate their advantages and disadvantages and the ability to implement and interpret the results of these techniques.	6 C

Course: Statistical Learning in Data Science Exercise (Exercise)	2 WLH

Admission requirements: none	**Recommended previous knowledge:** Basic knowledge of linear algebra and probability Completion of B.Inf.1236 Machine Learning or equivalent
Language: English	**Person responsible for module:** Jun.-Prof. Dr. Anne Christin Hauschild Prof. Dr. Michael Altenbuchinger
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1 - 3

Maximum number of students:	
not limited	

Georg-August-Universität Göttingen **Module M.Inf.2201: Probabilistic Machine Learning**	9 C 6 WLH

Learning outcome, core skills: After successful completion of the module, students • know the principles, paradigms, and challenges of probabilistic reasoning • apply basis principles and tools to perform probabilistic reasoning • manipulate distributions and densities of random variables • apply different methods for inference in probabilistic models (direct solving, sampling, variational inference, Laplace approximation) • apply latent variable models for given problems • perform inference in various forms of Gaussian models using closure properties of the Gaussian family • use graphical models to describe and reason about multivariate distributions of random variables • apply and implement learning algorithms in probabilistic models • can choose from a toolbox of basic algorithms for probabilistic inference on given problems • can implement and debug probabilistic algorithms and inference techniques • apply state of the art deep probabilistic models such as variational autoencoders or normalizing flows	**Workload:** Attendance time: 84 h Self-study time: 186 h

Course: Probabilistic Machine Learning (Lecture)	4 WLH
Examination: Written examination (120 minutes) **Examination requirements:** • Ability to use principles and tools of probabilistic reasoning on given problems • Ability to extend and modify existing algorithms of probabilistic inference • Ability to diagnose problems in algorithms of probabilistic reasoning • Ability to mathematically derive results in probabilistic models • Ability to use graphical models to simplify problems of probabilistic reasoning • Knowledge of common models and algorithms of probabilistic inference (Gaussian, Bayesian logistic regression, autoencoders, normalizing flows, and others). • Knowledge of common sampling algorithms (importance sampling, MCMC)	9 C

Course: Probabilistic Machine Learning – Exercise (Exercise) Bonus % for the final exam can be gathered by successfully solving exercise sheets and defending them to a tutor.	2 WLH

Admission requirements: none	**Recommended previous knowledge:** • Basic knowledge of linear algebra • Basic knowledge of multivariate calculus • Python, in particular numpy • Basic knowledge of probability
Language: English	**Person responsible for module:** Prof. Dr. Fabian Sinz

	Dr. Johannes Söding
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1 - 4
Maximum number of students: 50	

Additional notes and regulations:

The course can be taken in parallel to B.Inf.1237 Deep Learning.

Georg-August-Universität Göttingen	6 C
Module M.Inf.2202: Deep Learning for Natural Language Processing	4 WLH

Learning outcome, core skills: The course seeks to enable students to solve a wide range of applied problems in Natural Language Processing. After successfully completing the course, the participants should be able to: • Explain state-of-the-art methods to tackle NLP sub-problems, such as text representation, information extraction, text mining, language modeling, and similarity detection • Determine the conceptual requirements of specific NLP tasks • Assess the strengths and limitations of state-of-the-art NLP approaches • Devise solutions for complex, interdisciplinary NLP problems by implementing and adapting suitable algorithms and data structures • Evaluate NLP methods and systems quantitatively and qualitatively	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Lecture Deep Learning for Natural Language Processing (Lecture) *Contents*: The lecture will cover the following topics: Text representation • Words, sentences, paragraphs, documents • Text processing, regular expressions, tokenization, stemming, lemmatization • Bag-of-Words, weighting schemes (e.g., tf-idf), information retrieval • Minimum edit distance • Language models, N-grams, perplexity, information gain, smoothing • Word sense, lexical databases, distance measures Word embeddings and dense vector representations • Vector representation • Recap on NLP representations before 2013 • word2vec, GloVe, fastText • Paragraph-Vectors • Multi-Sense Embeddings • ELMo, USE Applications • Lexical databases, lexical semantics • Word sense disambiguation, semantic similarity • Part-of-speech tagging, parsing • Word similarity, word dissimilarity, distance measures • Text classification • Sentiment analysis / evaluation • Named entity recognition, information extraction, relation extraction • Questioning and answering, chatbots, dialog systems • Text summarization	2 WLH

• Machine translation • Fake news detection • Plagiarism / paraphrase detection • Math retrieval, MathML • Automatic detection of political opinions • Online harassment detection • Collaboration network analysis Please visit www.gipplab.org/teaching for details on this course.	
Examination: Written test (90 min.) or oral exam (approx. 20 min.) **Examination prerequisites:** Successful completion of the examination in the practical course component of this module. **Examination requirements:** • Knowledge of major NLP tasks, sub-tasks, and applications • Ability to explain state-of-the-art methods to address NLP tasks, such as text representation, information extraction, text mining, language modeling, and similarity detection • Ability to analyze the conceptual requirements of specific NLP tasks • Ability to compare the suitability of state-of-the-art NLP approaches for specific tasks • Ability to valuate NLP methods and systems quantitatively and qualitatively	2 C
Course: Practical Course Deep Learning for Natural Language Processing (Practical course) *Contents*: In the practical course, students work on applied research projects (teamwork is possible) that address complex NLP downstream tasks and subtasks, such as: • Word similarity • Document and Sentence classification • Named entity recognition • Question and answering system • Text summarization • Objective and subjective classification • Sentiment analysis • Part-of-speech tagging • Compositional knowledge entailment (entailment, contradiction, neutral) • Relation extraction and parsing • Machine translation • … Applications that participants can address in their projects include but are not limited to: • Plagiarism and paraphrase detection • Social media analysis • Fake news identification and classification • Spell checking • Detection of political opinions	2 WLH

- Identification of opinion polarity
- Online harassment and bias identification systems
- Collaboration network analysis

Using the programming language Python and presenting the intermediate and final results of the projects is mandatory.

Please visit www.gipplab.org/teaching for details on this course.

Examination: Oral Presentation (approx. 20 minutes) **Examination prerequisites:** Successful completion of an applied research project including at least one intermediate milestone or presentation. **Examination requirements:** • Ability to analyze the conceptual requirements of specific NLP problems • Ability to determine the conceptual requirements of specific IR and NLP problems • Ability to compare the suitability of algorithms and data structures for specific NLP problems • Ability to devise solutions for complex, interdisciplinary NLP tasks by implementing and adapting suitable algorithms and data structures • Ability to evaluate NLP methods and systems quantitatively and qualitatively	4 C

Admission requirements: none	**Recommended previous knowledge:** Basic knowledge of Python (e.g., branches, loops, object orientation) is required to complete the course. Experience with numpy, sckit-learn, pandas, and other libraries in the SciPy ecosystem is beneficial but not mandatory. For participants who are unfamiliar with Python, a fast-paced introduction into the essentials of the language will be provided.
Language: English	**Person responsible for module:** Prof. Dr. Bela Gipp
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 30	

Additional notes and regulations: This course provides a good foundation for a bachelor's or master's thesis in our group. Visit www.gipplab.org/students-corner/graduation-projects for our current theses proposals.

Georg-August-Universität Göttingen	5 C
Module M.Inf.2241: Current Topics in Machine Learning	2 WLH

Learning outcome, core skills:	**Workload:**
After successful completion of the module, students • have gained a deeper knowledge in specific topics within the field of machine learning • have improved their oral presentation skills • know how to methodically read and analyse scientific research papers • know how to write an analysis of a specific research field based on their analysis of state-of-the-art research • have improved their ability to work independently in a pre-defined context	Attendance time: 28 h Self-study time: 122 h

Course: Current Topics in Machine Learning (Seminar)	2 WLH
Examination: Oral presentation (approx. 30 min.) and term paper (max. 5000 words) **Examination requirements:** Knowledge in a specific field of machine learning; ability to present the acquired knowledge in a both orally and in a written report.	5 C

Admission requirements:	**Recommended previous knowledge:**
none	B.Inf.1236 Machine Learning B.Inf.1237 Deep Learning (the seminar can accompany lecture in the same term)
Language: English	**Person responsible for module:** Prof. Dr. Alexander Ecker
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1 - 4
Maximum number of students: 15	

Georg-August-Universität Göttingen **Module M.Inf.2242: Journal Club Machine Learning and Computational Neuroscience**	5 C 2 WLH

Learning outcome, core skills: After successful completion of the module, students • have gained a deeper knowledge in specific topics within the fields of machine learning and computational neuroscience • have improved their oral presentation and discussion skills • know how to methodically read and critically analyse original scientific research papers • are able to lead a scientific discussion on an original research paper	**Workload:** Attendance time: 28 h Self-study time: 122 h

Course: Journal Club Machine Learning and Computational Neuroscience	2 WLH
Examination: Oral Presentation (approx. 30 minutes), not graded **Examination prerequisites:** Regular participation **Examination requirements:** Knowledge of current topics in machine learning and computational neuroscience; ability to present the acquired knowledge orally and lead a discussion on the topic.	5 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Alexander Ecker
Course frequency: irregular	**Duration:** 1 semester[s]

Module M.Inf.2243: Selected Topics in Data Science	3 WLH

Learning outcome, core skills:	**Workload:**
After completing the module, students should be able to:	Attendance time:
	42 h
• Investigate a specific topic in the Data Science field in depth	Self-study time:
• Identify research trends and existing solutions in the area to be investigated	108 h
• Explain, compare, and discuss these solutions	
• Develop ideas to improve the current state of the art	
• Work independently in a pre-defined context	
• Gather, organize, read, analyze, and discuss scientific research papers	
• Write an academic paper	
• Give an academic presentation about their topic	

Course: Selected Topics in Data Science (Seminar)	3 WLH
Contents:	
Please visit www.gipplab.org/teaching for details on this course.	

Examination: Oral Presentation (approx. 20 minutes)	5 C
Examination prerequisites:	
Regular participation	
Examination requirements:	
The students shall demonstrate their ability to:	
• Conduct literature research on a current Data Science topic	
• Identify, understand, and explain state-of-the-art approaches in the chosen area	
• Propose novel solutions to improve the current state-of-the-art methods	
• Either implement their ideas in software or write a structured scientific paper on their findings	
• Present and critically discuss their software project or scientific paper in a presentation	

Admission requirements:	**Recommended previous knowledge:**

Georg-August-Universität Göttingen **Module M.Inf.2244: Seminar Deep Learning in Biology and Medicine**	5 C 2 WLH

Learning outcome, core skills:	Workload:
Deep learning is already one of the most important data analysis methods in biological and medical research and is increasingly also used in clinical practice. Its applications range from protein folding and molecule design for drug discovery to gene sequence analysis to image analysis for microscopy data and medical imaging. As part of the seminar students will pick a specific application, learn how to perform literature research and prepare a presentation on the topic. After successful completion of the modul students will be able to • Appraise research in the area of deep learning in biology and medicine. • Compose a presentation covering their selected topic in depth. • Evaluate methods and findings of other researchers. • Understand and explain the methods and domain knowledge fundamental to their topic.	Attendance time: 28 h Self-study time: 122 h

Course: **Deep Learning in Biology and Medicine** (Seminar)	2 WLH
Examination: Presentation (approx. 45 minutes) and written report (max. 20 pages) **Examination prerequisites:** Attendance in 80% of the seminar presentations **Examination requirements:** Advanced knowledge of a specific research topic in the field of deep learning applied in biology or medicine; written scientific report; oral presentation	5 C

Admission requirements: none	Recommended previous knowledge: B.Inf.1236; B.Inf.1237
Language: English	**Person responsible for module:** Prof. Dr. Constantin Pape

The successful completion of the module enables students to learn methods, concepts, theories and applications in the area of the theory of operations research. Depending on the current course offer the following content-related competencies may be pursued. Students	Self-study time: 186 h

Learning outcome, core skills:

Learning outcome:

The successful completion of the module enables students to learn methods, concepts, theories and applications in the area of the theory of operations research. Depending on the current course offer the following content-related competencies may be pursued. Students

- are able to identify problems of operations research in application-oriented problems and formulate them as optimisation problems;
- know methods for the modelling of application-oriented problems and are able to apply them;
- evaluate the target function included in a model and the side conditions on the basis of their particular important characteristics;
- analyse the complexity of the particular resulting optimisation problem;
- are able to develop optimisation methods for the solution of a problem of operation research or adapt general methods to special problems;
- know methods with which the quality of optimal solutions can be estimated to the upper and lower and apply them to the problem in question;
- differentiate between accurate solution methods, approximation methods with quality guarantee and heuristics and evaluate different methods on the basis of the quality of the found solutions and their computing time;
- interpret the found solutions for the underlying practical problem and evaluate the model and solution method on this basis.

Core skills:

After having successfully completed the module, students will be able to

- discuss basic concepts of the area "Operations research";
- explain basic ideas of proof in the area "Operations research";
- identify typical applications in the area "Operations research".

Workload:
Attendance time:
84 h
Self-study time:
186 h

Course: Lecture course (Lecture)	4 WLH

Examination: Oral examinationappr. 20 minutes, alternatively written examination, **120 minutes**	9 C
Examination prerequisites: M.Mat.3130.Ue: Achievement of at least 50% of the exercise points and presentation, twice, of solutions in the exercise sessions	

Course: Exercise session (Exercise)	2 WLH

Examination requirements: Successful proof of the acquired skills and competencies in the area "Operations research"	

Admission requirements:	**Recommended previous knowledge:**

none	B.Mat.2310
Language: English	**Person responsible for module:** Programme coordinator
Course frequency: once a year	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** Master: 1 - 3
Maximum number of students: not limited	

Additional notes and regulations:

Instructor: Lecturers at the Institute of Numerical and Applied Mathematics

Georg-August-Universität Göttingen **Module M.Mat.4639: Aspects of scientific computing / applied mathematics**	6 C 4 WLH

Learning outcome, core skills:	Workload:
Learning outcome: The successful completion of modules of the cycle "Scientific computing / Applied mathematics" enables students to learn and apply methods, concepts, theories and applications in the area of "Scientific computing / Applied mathematics". During the course of the cycle students will be successively introduced to current research topics and able to carry out independent contributions to research (e. g. within the scope of a practical course in scientific computing or a Master's thesis). Depending on the current course offer the following content-related competencies may be pursued. Students • are familiar with the theory of basic mathematical models of the corresponding subject area, especially about the existence and uniqueness of solutions; • know basic methods for the numerical solution of these models; • analyse stability, convergence and efficiency of numerical solution strategies; • apply available software for the solution of the corresponding numerical methods and evaluate the results sceptically; • evaluate different numerical methods on the basis of the quality of the solutions, the complexity and their computing time; • are informed about current developments of scientific computing, like e. g. GPU computing and use available soft- and hardware; • use methods of scientific computing for solving application problems, like e. g. of natural and business sciences. **Core skills:** After having successfully completed the module, students will be able to • conduct scholarly debates about problems of the area "Scientific computing / Applied mathematics"; • carry out scientific work under supervision in the area "Scientific computing / Applied mathematics".	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Lecture course (4 WLH); alternatively lecture course (2 WLH) with exercises/seminar (2 WLH)	4 WLH
Examination: Oral examination (approx. 20 minutes)	6 C

Examination requirements: Proof of the acquisition of special skills and the mastery of advanced competencies in the area "Scientific computing / applied mathematics"	

Admission requirements: none	Recommended previous knowledge: B.Mat.3339
Language:	**Person responsible for module:**

English	Programme coordinator
Course frequency: Usually subsequent to the module M.Mat.4539 "Specialisation in scientific computing / applied mathematics"	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** Master: 1 - 3
Maximum number of students: not limited	

Additional notes and regulations:
Instructor: Lecturers at the Institute of Numerical and Applied Mathematics

Georg-August-Universität Göttingen **Module M.Phy.5601: Seminar Computational Neuroscience/Neuro-informatics**	4 C 2 WLH

Learning outcome, core skills: After successful completion of the module, students ... • have deepened their knowledge of computational neuroscience / neuroinformatics by an independent elaboration of a topic; • have learned methods of presentation of topics from computer science; • are able to deal with (English-language) literature; • are able to present an informatic topic; • are able to lead a scientific discussion.	**Workload:** Attendance time: 28 h Self-study time: 92 h

Course: Seminar (Seminar) *Course frequency:* each semester	
Examination: Presentation (approx. 45 Min.) with written report (max. 7 S.) **Examination prerequisites:** regular participation **Examination requirements:** Independent preparation and presentation of research-related topics from the area of computational neuroscience / neuroinformatics as well as biophysics of neuronal systems.	4 C

Admission requirements: none	**Recommended previous knowledge:** B.Phy.5614
Language: English	**Person responsible for module:** Prof. Dr. Florentin Andreas Wörgötter
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** Master: 1 - 3
Maximum number of students: 14	

Georg-August-Universität Göttingen **Module M.WIWI-BWL.0001: Corporate Finance**	6 C 4 WLH
Learning outcome, core skills: After a successful completion of the course students should be able to: • give an overview of major problems in corporate finance, how they arise and how they are related, • understand, apply and critically reflect on central methods of risk assessment, capital budgeting, and investment decision making, • understand, apply and critically reflect on major theories of market valuation of risky payment streams, • understand and critically reflect on the efficient market hypothesis and its consequences for investments and corporate finance, • understand and critically reflect on behavioral effects in financial markets, their economic foundations, and their consequences for investments and corporate finance, • understand the major theories of optimal capital structure and payout policy and being able to relate these theories to various market frictions and agency problems, • analyze the major theories of optimal capital structure and payout policy with respect to their practical implications and their ability to explain observed financing behavior.	**Workload:** Attendance time: 56 h Self-study time: 124 h
Course: Corporate Finance (Lecture) *Contents*: 1. Fundamentals of Corporate Finance 2. Investments and Capital Budgeting under Risk: Risk Analysis and Subjective Valuation 3. Investments and Capital Budgeting under Risk: Market Valuation - Valuation Models (Capital Asset Pricing Model, Arbitrage Pricing Theory, Empirical Factor Models) 4. Investments and Capital Budgeting under Risk: Market Valuation - Implementation 5. Financing Instruments, Efficient Capital Markets, Behavioral Finance und Financing Decisions 6. Capital Structure Decisions 7. Dividends and Payout Policy Parts of the material covered by the lectures will be transmitted via recordings that students have to work through on their own.	2 WLH
Course: Corporate Finance (Exercise) *Contents*: In the accompanying practice sessions students deepen and broaden their knowledge from the lectures.	2 WLH

Examination: Written examination (90 minutes)	6 C

Examination requirements:	
• Demonstrate a comprehensive understanding of major issues in corporate finance and how they are connected, • document an understanding of methods of risk assessment and capital budgeting under risk and their application, • demonstrate a thorough understanding of major theories of market valuation and the ability to critically asses their strengths and weaknesses, • show a profound understanding of the concepts of market efficiency, behavioral biases, and their implications for investors and firms, • show the ability to analyze decisions on capital structure and payout policy routed in a clear understanding of various market frictions and agency problems.	

Admission requirements:	Recommended previous knowledge:
none	Basic knowledge from Bachelor courses in finance
Language:	**Person responsible for module:**
German	Prof. Dr. Olaf Korn
Course frequency:	**Duration:**
each summer semester	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**
twice	1 - 2
Maximum number of students:	
not limited	

Georg-August-Universität Göttingen	6 C
Module M.WIWI-BWL.0004: Financial Risk Management	4 WLH

Learning outcome, core skills:	**Workload:**
After a successful completion of the course students are able to:	Attendance time: 56 h
- understand and explain how risk management is related to other issues in corporate finance, - critically assess different motivations for corporate risk management, - understand and critically assess different risk measures and how they are applied in practice, - understand and explain how international risks can be managed and how the management of international risks is related to various economic parity conditions, - understand, analyze and critically apply measures and methods to manage interest rate risk, - understand, analyze and critically apply measures and methods to manage credit risk, - understand, analyze and critically apply hedging strategies for commodity price risk.	Self-study time: 124 h

Course: Financial Risk Management (Lecture)	2 WLH
Contents: 1. Introduction 2. Risk Management: Motivation and Strategies 3. Managing Interest Rate Risk 4. Managing Credit Risk 5. Managing International Risks 6. Managing Commodity Price Risk Parts of the material covered by the lectures will be transmitted via recordings that students have to work through on their own. Parts of the contact hours during lectures will be used by the students to discuss open issues and to work on specific cases and applications of the main concepts.	

Course: Financial Risk Management (Tutorial)	2 WLH
Contents: In the accompanying practice sessions students deepen and broaden their knowledge from the lectures.	

Examination: Written examination (90 minutes)	6 C

Examination requirements:	
- Demonstrate a profound knowledge of how risk management is related to other issues in corporate finance, - document an understanding of viable reasons for corporate risk management and how corporate risk management can create value, - demonstrate the ability to analyze and apply different risk measures,	

- show a profound understanding of methods and techniques used to manage international risks, interest rate risk, credit risk, and commodity price risk.

Admission requirements:	Recommended previous knowledge:
none	M.WIWI-BWL.0001 Corporate Finance
Language:	**Person responsible for module:**
English	Prof. Dr. Olaf Korn
Course frequency:	**Duration:**
each winter semester	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**
twice	2 - 3

not limited	

| Georg-August-Universität Göttingen | 6 C |
| **Module M.WIWI-BWL.0018: Analysis of IFRS Financial Statements** | 4 WLH |

Learning outcome, core skills:	**Workload:**
This course integrates different facets of financial statement analysis and corporate valuation. After the successful completion of this course, students have acquired the following skills: - they are familiar with contemporary methods of financial statement analysis and accounting-based valuation. In particular, students are familiar with (1) the interrelation between valuation theory and accounting, (2) relevant characteristics of financial statements prepared on the basis of International Financial Reporting Standards (IFRS), and (3) application of the valuation and analysis framework to real world cases and examples, like analyst reports, - students are able to assess several approaches to valuation of equity and debt investments and their respective merits. Based on the concept of accounting-based valuation, students are familiarized with an analytical framework for analysis and forecasting of financial statements, with an emphasis on ratio analysis of profitability and growth, - overall, successful participants of this course are expected to be familiar with contemporary methods of equity valuation, the use of financial statement information to that end, and the application of that knowledge to real-world valuation cases.	Attendance time: 56 h Self-study time: 124 h

Course: Analysis of IFRS Financial Statements (Lecture)	2 WLH
Contents: *I. Foundations of Financial Statement Analysis* *II. IFRS Financial Statements* *III. Valuation Methods* *IV. Analysis of Financial Statements* *V. Forecasting and Valuation Analysis*	

Course: Analysis of IFRS Financial Statements (Tutorial)	2 WLH
Examination: Written examination (90 minutes)	6 C

Examination requirements:	
In order to accomplish successfully this course, students are expected to be familiar - with contemporary methods of equity valuation, - the use of financial statement information to that end, and - the application of that knowledge to real-world valuation cases.	

Admission requirements:	**Recommended previous knowledge:**
none	M.WIWI-BWL.0002 IFRS Financial Reporting
Language:	**Person responsible for module:**
English	Prof. Dr. Jörg-Markus Hitz

Course frequency:	Duration:
every second semester	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**
twice	2 - 3
Maximum number of students:	
not limited	

Georg-August-Universität Göttingen **Module M.WIWI-BWL.0023: Performance Management**	6 C 4 WLH

Learning outcome, core skills: The course participants should gain insight into the conceptual principles of metrics for a value-based Management system. By combining scientific results with practical examples participants should develop an understanding of positive and negative consequences of the elements of value-based management. Moreover, students should gain knowledge of approaches to measuring sustainability in corporate management.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Performance Management (Lecture) *Contents*: This course covers performance management principles of corporate activities with a focus on a value-based perspective extended by a sustainability perspective. The course is divided into five main chapters. First, principles of management accounting and value-based management are introduced. Second, the course presents market- and accounting based performance measures and illustrates its limits. Third, the conceptual fundament of a holistic value-based management and the corresponding dimensions of a consistent implementation are presented. Fourth, sustainability-oriented metrics are discussed. Fifth, the value-based approaches are embedded in the design of performance management systems.	2 WLH
Course: Performance Management (Exercise) *Contents*: The tutorial serves to apply the introduced concepts of Value-based management by solving exercises and discussing cases. First, the tutorial introduces the distinct stakeholder groups. Second, focusing on shareholders the tutorial deals with corporate valuation methods and its qualification for a value-based steering. Third, the concepts and weaknesses of traditional key performance indicators are discussed. Fourth, the tutorial elucidates the methodological concepts of value-based metrics and their potential. Fifth, the tutorial includes the stakeholder orientation and discusses sustainability-oriented metrics. Sixth, based on value-based metrics, the tutorial explains the dimensions of a holistic value-based management and concludes with a discussion of the appropriateness of a value-based management implementation.	2 WLH
Examination: Written examination (90 minutes)	6 C

Examination requirements: Proofing the knowledge of market- and accounting-based performance measures, the elements of value-based management as well as sustainability-oriented metrics by naming, calculating and explaining in relevant exercises. Moreover, the application of the gained knowledge in practically relevant exam questions.	

Admission requirements: none	**Recommended previous knowledge:** Basic knowledge in Management Accounting
Language: German	**Person responsible for module:** Prof. Dr. Michael Wolff

not limited	

Georg-August-Universität Göttingen **Module M.WIWI-BWL.0024: Corporate Planning**	6 C 3 WLH

Learning outcome, core skills: Die Studierenden - kennen wichtige Standortfaktoren und damit verbundene Problemstellungen, - können Standort- und Transportfragen mit Hilfe verschiedener Algorithmen (z.B. Tripel-, Kruskal- oder Dijkstra-Algorithmus) bearbeiten, - kennen die Grundlagen der Industrie 4.0, - können Absatzprognosen mit Hilfe von Gompertz- und Pearl-Kurven erstellen, - können Fragestellungen des Projektmanagements mit Hilfe von MPM- und CPM-Netzplänen bearbeiten, - können Entscheidungsunterstützungsmethoden bei mehreren Zielsetzungen anwenden, - kennen wichtige Aspekte der Transport- und Supply Chain Planung sowie der Entsorgungslogistik.	**Workload:** Attendance time: 42 h Self-study time: 138 h

Course: Unternehmensplanung (Lecture) *Contents*: Anwendung von Methoden des Operations Research auf Fragestellungen des der strategischen, taktischen und operativen Produktionsmanagements im Industriebetrieb. 1. Standortwahl und Standortfaktoren 2. Lebenszyklen, Prognosen, Simulation 3. Auswahl geeigneter Produktionsprozesse und –verfahren 4. Industrie 4.0 5. Forschungs- und Entwicklungsplanung im Industriebetrieb 6. Supply Chain Management 7. Produktions- und Entsorgungslogistik	2 WLH
Course: Unternehmensplanung (Exercise) *Contents*: In der Übung werden die Methoden des Operations Research und Inhalte der Vorlesung angewendet und Übungsaufgaben berechnet. Dazu gehören: - Anwendung des Tripel-Algorithmus (Algorithmus von Floyd und Warshall), - Berechnung von Prognosedaten mit Hilfe der Gompertz- und Pearl-Kurve, - Anwendung von MPM und CPM-Netzplantechniken, - Anwendung von Methoden der multikriteriellen Entscheidungsunterstützung, speziell Nutzwertanalyse und PROMETHEE, - Anwendung des Dijkstra- und des Kruskal-Algorithmus zur Bestimmung optimaler Wege und Netze in Graphen.	1 WLH
Examination: Written examination (90 minutes)	6 C

Examination requirements:	

Die Studierenden weisen in der Modulprüfung Kenntnisse und Verständnis der Konzepte und Methoden zur Unternehmensplanung für strategische, taktische und operative Fragestellungen nach, insbesondere

- Nachweis der Kenntnis von Methoden zur Standortplanung sowie deren Anwendung,
- Darlegung eines übergreifenden Verständnisses des Supply Chain Managements und der Fähigkeit zur kritischen Beurteilung der verschiedenen Planungsansätze.

Admission requirements:	Recommended previous knowledge:
none	B.WIWI-BWL.0004 Produktion und Logistik
	B.WIWI-BWL.0052 Logistikmanagement
	B.WIWI-BWL.0037 Produktionsmanagement
Language:	**Person responsible for module:**
German	Prof. Dr. Jutta Geldermann
Course frequency:	**Duration:**
each winter semester	1 semester[s]

twice	1 - 2
Maximum number of students:	
not limited	

Georg-August-Universität Göttingen	6 C
Module M.WIWI-BWL.0034: Logistics and Supply Chain Management	3 WLH

Learning outcome, core skills:	**Workload:**
Die Studierenden:	Attendance time:
	42 h
• kennen die Teilbereiche und Funktionen der Logistik sowie des Supply Chain Managements und können diese klassifizieren,	Self-study time:
• kennen den Begriff „Standortplanung", können dessen Teilgebiete definieren und verschiedene OR-Modelle und Verfahren zur Standortbestimmung anwenden,	138 h
• können das klassische Transportproblem erläutern und kennen dessen graphentheoretische Grundlagen,	
• kennen verschiedene Lösungsalgorithmen für das Transportproblem und können diese auch auf Sonderformen des klassischen Transportproblems anwenden,	
• kennen die Ausgestaltungsformen von Supply Chains und das SCOR-Modell,	
• können Produkt- und Prozessdesign voneinander abgrenzen,	
• kennen mögliche Formen der Vertragsgestaltung im Supply Chain Management,	
• kennen die verschiedenen Modelle der Bestellplanung und die Bestellregeln,	
• können statische Lagerhaltungsmodelle interpretieren und anwenden,	
• können dynamische Modelle voneinander abgrenzen und anwenden.	

Course: Logistik- und Supply Chain Management (Lecture)	2 WLH
Contents:	
Inhaltlicher Schwerpunkt der Veranstaltung ist die Betrachtung der verschiedenen logistischen Strukturen und Probleme in und zwischen produzierenden Unternehmen. Dazu werden Quantitative Modelle vorgestellt und auf die Bereiche der Standortwahl, der Transportplanung, des Supply Chain Management und der Lagerhaltung angewendet.	

Course: Logistik- und Supply Chain Management (Exercise)	1 WLH

Examination: Written examination (90 minutes)	6 C
Examination requirements:	
Die Studierenden weisen in der Prüfung Kenntnisse in den folgenden Bereichen nach:	
• Grundlagen logistischer Problemstellungen	
• Standortplanung	
• Transportplanung	
• Supply Chain Management	
• Lagerhaltungsmodelle	
• Anwendung der vorgestellten OR-Modelle und Algorithmen auf die Problemstellungen der obigen Teilbereiche

Georg-August-Universität Göttingen **Module M.WIWI-BWL.0055: Marketing Channel Strategy**	6 C 2 WLH

Learning outcome, core skills: After successfully completing the course, the students will be able to identify coordination problems within a marketing channel, develop strategies for problem solving and assess their economic benefits. They are given the ability to understand and evaluate research results (in the form of theories, models and empirical studies) regarding marketing channels. The critical examination of hypotheses and methods of testing also enables the students to work scientifically themselves.	**Workload:** Attendance time: 28 h Self-study time: 152 h

Course: Marketing Channel Strategy (Lecture) *Contents*: 1. Introduction – Goals, Structure and Organizational Matters of the Lecture 2. Basic Definitions 3. Marketing Channel Actors 4. Market Segmentation 5. Management of the Marketing Channel 6. Channel Conflicts – Sources and Solution Strategies 7. Types of Coordination – Relationship and Institutional Forms 8. Performance Measurement 9. Omni-Channel Strategies	2 WLH

Examination: Written examination (90 minutes)	6 C

Examination requirements: Proof of knowledge about theories, models and methods that analyze questions regarding the design of marketing channels. Creation of solutions for conflicts between marketing channel actors. Assessment of the economic benefits of individual types of coordination.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: German	**Person responsible for module:** Prof. Dr. Waldemar Toporowski
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1 - 2
Maximum number of students: not limited	

Georg-August-Universität Göttingen	18 C
Module M.WIWI-BWL.0059: Research Project	4 WLH

Learning outcome, core skills:	**Workload:**
Students should analyze a complex topic with scientific methods and present, discuss and document their results at the scientific level. Through an independent processing of a comprehensive research project, students should create a link between theory and practice and acquire additional social skills through group work. The following competencies are to be learned or deepened under close supervision, guidance and review by the scientific staff:	Attendance time: 56 h Self-study time: 484 h

- understanding and analyzing relevant literature in order to formulate hypotheses about the effects of impact correlations,
- using of methods, especially in data collection and evaluation, in order to achieve the required methodological quality or to obtain software prototypes,
- developing a scientific artifact to solve problems,
- evaluating your own project progress through regular meetings of the intermediate steps with the supervising scientific staff.

Course: Research Project	4 WLH
Contents: Concrete steps / Course of the project study:	

- presentation of the topic and the organizational milestones,
- defining the problem,
- identification and presentation of the necessary measures for problem-solving in an interim presentation,
- evaluation of information (preparation, analysis, and compression to a measure necessary for decision-making) or development of a prototype,
- final presentation,
- preparation and submission of the project report, including the documentation of the implemented steps.

Examination: Presentation (about 45 minutes) with a term paper (max. 15 pages per participant in the group work) **Examination prerequisites:** Ongoing project work	18 C

Examination requirements: Implementation of the project, written documentation of the project, presentation of the results.	

Admission requirements:	**Recommended previous knowledge:**
Module M.WIWI-BWL.0079 Market Research I or Module M.WIWI-BWL.0080 Market Research II (for all students of the Master's programme Marketing and E-Business as well as all students of other	M.WIWI-BWL.0090 Synergy module and Masters seminar (Prior knowledge of scientific research is expected and will not be covered in this course)

Master's programmes who take this module in the field of Marketing)	
Language: German	**Person responsible for module:** Prof. Dr. Yasemin Boztug Prof. Dr. Maik Hammerschmidt, Prof. Dr. Lutz Kolbe, Prof. Dr. Matthias Schumann, Prof. Dr. Waldemar Toporowski, Jun.-Prof. Dr. Simon Trang, Prof. Dr. Manuel Trenz
Course frequency: each semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 2 - 3
Maximum number of students: 30	

Georg-August-Universität Göttingen **Module M.WIWI-BWL.0109: International Human Resource Management**	6 C 3 WLH

Learning outcome, core skills: After taking this module, students will have gained theoretical knowledge of Human Resource Management (HRM) in an international context, as well as practical knowledge and skills to prepare them for a future career in the HR department and/or management of international companies. Furthermore, the course fosters cross-cultural competence by analyzing the impact of national context and culture on HRM and enables the students to analyze, plan, deliver, and evaluate measures of international HRM.	**Workload:** Attendance time: 42 h Self-study time: 138 h

Course: International Human Resource Management (Lecture) *Contents*: Lectures will introduce relevant theories, basic cultural concepts, and strategic relevance of HRM in an international context. Key functions of international HRM will be discussed (e.g. international staffing & recruiting, training & development, expatriate management, etc.).	2 WLH
Course: International Human Resource Management (Tutorial) *Contents*: Tutorials will help students to discuss and transfer knowledge between theory and practice, using case studies and examples.	1 WLH
Examination: Written examination (90 minutes) **Examination requirements:** • Demonstration of profound knowledge of the various theoretical approaches, functions and measures of international HRM. • Demonstration of cross-cultural competence and understanding of context and culture on HRM issues. • Demonstration of understanding of strategies and current challenges of multinational firms and international HRM and ability to transfer theoretical knowledge in order to solve them.	6 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Fabian Froese
Course frequency: every winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1 - 3
Maximum number of students: not limited	

Georg-August-Universität Göttingen **Module M.WIWI-BWL.0112: Corporate Development**	6 C 4 WLH

Learning outcome, core skills: After successful completion of this course, students are able to: • demonstrate a profound knowledge of different perspectives and drivers of corporate development. • identify and define options of actions and strategies for the development of companies and the conditions necessary to obtain success. • understand tools and measures important for the control of innovative activities in companies.… apply and critically discuss the tools, strategies, and concepts that have been acquired in order to analyze as well as to tackle case studies. • deal with the ambiguity of real situations and make reasonable decisions.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Corporate Development (Lecture)
Contents:
a) Introduction to corporate development
 	
  • What is "Corporate Development" and why is it practically relevant?
 	
b) Tracks and drivers of corporate development processes
 	
  • In which different tracks do companies develop over time and why?
  • Models and theories about patterns of change
  • Measures and mechanisms to manage corporate development and to ensure sustainable success
  • Models on driving forces of corporate development and empirical studies discussing different outcomes
 	
c) Growing and reducing company size
 	
  • Strategies of corporate development, direction of growth and shifting boundaries of companies
  • In which ways can a company grow?
  • How can one evaluate the performance potential of a growth strategy?
  • When and how do companies reduce their size and how can they do so successfully?
 	
d) Innovation
 	
  • Relevance of innovations and introduction to different strategies regarding to their timing
  • Techniques and empirical studies on creation and ideation in organizations
  • Theories on the institutionalization of innovation management within organizations
	2 WLH

Course: Corporate Development (Exercise) *Contents*: In the accompanying practice sessions, students deepen and broaden their knowledge from lectures by applying theories and methods to real-world problem sets.	2 WLH
Examination: Written examination (90 minutes)	6 C

Examination requirements:

Students:

- demonstrate a profound knowledge of and ability to manage challenges in corporate development.
- document a thorough understanding of how to actively design an organizations' development processes.
- demonstrate the ability to discuss different measures, strategies, and tools to manage corporate development.
- show a profound understanding of empirical studies and theoretical implications and be able to transfer findings on current practical examples in case studies.

Admission requirements:	Recommended previous knowledge:

Georg-August-Universität Göttingen **Module M.WIWI-BWL.0134: Panel Data Analysis in Marketing**	6 C 2 WLH

Learning outcome, core skills: Panel data refers to observations from different individuals or units (consumers, stores, products, etc.) over several time periods (days, weeks, months, etc.). After successful attendance the students will understand the methodological principles of panel data analysis, especially in the context of consumer behavior and marketing-mix models. Further, they will be able to conduct own panel data analyses using the statistical programming language R.	**Workload:** Attendance time: 28 h Self-study time: 152 h

Course: Panel Data Analysis in Marketing (Lecture with exercise)	2 WLH

Contents:

- Introduction to R
- Refreshment in Regression Analysis
- Fixed Effects Models in Marketing
- Random Effects Models in Marketing
- Dynamic Panel Models in Marketing

Literature:

- Croissant & Millo (2017). *Panel Data Econometrics with R*. Wiley.
- Hanssens et al. (2003). *Market Response Models: Econometric and Time Series Analysis*. 2nd Edition. Kluwer.
- Baltagi (2013). *Econometric Analysis of Panel Data*, 5th Edition. Wiley.

Examination: Term Paper (max. 6000 words)	6 C

Examination requirements:
A self-conducted empirical project. Students will be provided with empirical data, but are welcome to analyze own projects. Students are advised to use the statistical programming language R, but can be allowed to use different statistics software in exceptional cases.

Theoretical, methodological and empirical elaboration of a selected topic in panel data analysis with focus on consumer behavior and/or marketing-mix modeling.

Admission requirements: none	**Recommended previous knowledge:** Basics in Hypothesis testing & Regression analysis Previous knowledge in R is not required
Language: English	**Person responsible for module:** Ossama Elshiewy

Module M.WIWI-BWL.0135: Digital Innovations and Design Thinking	2 WLH

Learning outcome, core skills:	**Workload:**
At the end of this active-learning based course, the student will be able to: • comprehend the opportunities created by digital innovations, • understand and apply the process for design thinking, • design digital solutions to meet customer needs, • design and evaluate entrepreneurial action.	Attendance time: 28 h Self-study time: 152 h

Course: Digital Innovations and Design Thinking (Seminar)	2 WLH
Contents: With technology disrupting firms and increasingly entire industries, the imperative is for students to have a deep understanding of digital innovations that are likely to shape the future and have the capacity to innovate. This project-based interdisciplinary course positioned at the intersection of digital innovations, design thinking and entrepreneurship is aimed at delivering the competencies demanded by businesses, non-profits and government agencies alike – an understanding of transformational opportunities created by digital technologies and the capacity to innovate. To help students build the capacity to innovate, the course uses the design thinking framework developed at Stanford University and widely used across the world today. **Literature:** • Jordan, J.M. (2012) Information, Technology, and Innovation: Resources for Growth in a Connected World. John Wiley & Sons. • The Field Guide to Human Centered Design (http://www.designkit.org/). • Ries, E. (2011) The Lean Startup: How Today's Entrepreneurs Use Continuous Innovation to Create Radically Successful Businesses. Crown Books.	

Examination: Term paper (max. 12 pages total, divided into three parts) with presentation (ca. 30 minutes)	6 C

Examination requirements:	
To pass the course, students have to write a seminar paper and give a related presentation. They have to demonstrate that they are able to systematically apply their knowledge of digital innovations and design thinking.	

Admission requirements: none	**Recommended previous knowledge:** Basic knowledge of Business Administration and Information Management.
Language: English	**Person responsible for module:** Prof. Balaji Rajagopalan, PhD.

Georg-August-Universität Göttingen **Module M.WIWI-BWL.0136: Digital Transformation**	6 C 2 WLH

Learning outcome, core skills: This course aims to develop a cross-functional and managerial understanding of digital transformation of business. Specifically, participants will be able after this course to make decisions related to the idea of leveraging digital resources for differential value creation. Participants will learn how to evaluate and assess the impact of digital technologies in the firm's environment, including customers, competitors, and broader communities. In addition, participants will be able to create strategies and approaches that are needed to prepare an organization for competing in the digital world. In sum, after taking this course, students will be able to know the foundations of how to manage the digital transformation inside an incumbent firm.	**Workload:** Attendance time: 28 h Self-study time: 152 h

Course: Digital Transformation (Lecture) *Contents*: Until recently, the knowledge of Information Technology (IT) and its application in the enterprise had been confined to the IT Department, requiring top management to take very concrete decisions from time to time. Not anymore. Today – in the digital age – successful business managers understand "digital", anticipate its impact on business, and leverage that insight for building digital competencies across the entire organization. The digital age is fueled by the drastic reduction in the cost of processing, storage, and communication, creating a high-density digital environment. During the last years, we have witnessed the "consumerization" of digital technologies, that is, the scope and impact of these technologies now transcends the application domain of enterprises to include large parts of society. Technology today is both available and affordable. This creates a new phenomenon where individuals incorporate cutting-edge digital technologies in their personal lives before businesses get a chance to adopt and implement them. In a way, this leads to a new kind of digital divide –that between society and business. Customers and employees of the younger generation come with new expectations that companies are not prepared to meet. To address this challenge, today's business leaders must be able to think digital. Thinking digital does not equal thinking IT. Digital focuses much less on process automation, transactions, and efficiency, and much more on creating new value-added experiences and interactions with customers, employees, and business partners. Ultimately, it enables the firm to generate new revenue by finding unique ways to combine its physical and digital resources. **Literature:** • McAfee, A. Examination: Written examination (90 minutes) **Examination prerequisites:** Regular and active course attendance and participation.	6 C

Examination requirements:

In order to accomplish successfully this course, students are expected to document an understanding of:

- Main digital drivers and their impact on society/business
- Digital capabilities needed to face potential digital disruptions
- Concepts and frameworks of digital transformation initiatives
- Managerial capabilities needed to address digital transformation initiatives

Admission requirements: none	**Recommended previous knowledge:** B.WIWI-OPH.0001 Firms and Markets B.WIWI-OPH.0003 Information and Communication Systems
Language: English	**Person responsible for module:** Prof. Dr. Robert Wayne Gregory
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1 - 4
Maximum number of students: 30	

Additional notes and regulations:

Limitation of the "lecture" due to the case studies.

Georg-August-Universität Göttingen **Module M.WIWI-BWL.0137: Electronic Commerce Systems**	6 C 2 WLH

Learning outcome, core skills: Upon completing this course the student will be able to: • Explain the characteristics and functions of electronic commerce including mobile commerce. • Describe and apply the process of developing electronic commerce sites and mobile commerce applications. • Implement an electronic commerce site using open source software. • Explain fundamental characteristics of electronic markets. • Describe common business models used in B2C and B2B electronic commerce. • Describe security and payment in electronic commerce including mobile commerce. • Describe the technology used in mobile commerce. • List and evaluate common applications in mobile commerce. • Speculate on the future of electronic commerce.	**Workload:** Attendance time: 28 h Self-study time: 152 h

Course: Electronic Commerce Systems (Lecture) *Contents*: This course examines the concepts, technology, and applications of electronic commerce, or e-commerce. Students are to work in teams to plan an e-commerce site for a real or hypothetical business and implement the site using PrestaShop. Students are to present their plan and implementation in a written report and in an oral presentation using PowerPoint. **Literature:** Turban, E., King, D., Lee, J.K., Liang, T.-P., Turban, D.C. (2015) Electronic Commerce - A Managerial and Social Networks Perspective, Springer	2 WLH
Examination: Written examination (60 minutes) **Examination prerequisites:** Practical examination and presentation (approx. 45 minutes)	6 C

Examination requirements: To pass the course, students have to demonstrate that they are able to systematically apply their knowledge of the conceptual and technological foundations of electronic commerce. They are expected to develop an individual business model, which is transferred into an electronic commerce concept and implemented as an electronic commerce web site.	

Admission requirements: none	**Recommended previous knowledge:** B.WIWI-OPH.0003 Information and Communication Systems
Language: English	**Person responsible for module:** Prof. Robert C. Nickerson

Course frequency:	Duration:

20	

Additional notes and regulations:

Limitation of the "lecture" due to the case studies.

Georg-August-Universität Göttingen **Module M.WIWI-BWL.0145: Doing Business in India**	3 C 1 WLH

Learning outcome, core skills: After attending this lecture, students have obtained background knowledge on the economic, political, and cultural environment that influence the business in India. In addition, students will obtain insights into successfully doing business in India. This course will prepare students for doing business in India.	**Workload:** Attendance time: 14 h Self-study time: 76 h

Course: Doing Business in India (Lecture) *Contents*: The lecture will introduce the economic, political, and cultural environment that influence business in India. Through a mixture of lectures, case studies, and discussions, students will study how foreign companies and managers do business in India. The contents will include market entry, marketing and human resource management.	1 WLH
Examination: Written examination (90 minutes)	3 C

Examination requirements: • Demonstration of knowledge in doing business in India, • demonstration of the ability to apply theoretical knowledge to practical Indian business challenges.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Fabian Froese
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 2 - 3

Module M.WIWI-BWL.0147: Doing Business in Korea	1 WLH

Learning outcome, core skills:	**Workload:**
After attending this lecture, students have obtained background knowledge on the economic, political, and cultural environment that influence the business in Korea. In addition, students will obtain insights into successfully doing business in Korea. This course will prepare students for doing business in Korea.	Attendance time: 14 h Self-study time: 76 h

Course: Doing Business in Korea (Lecture)	1 WLH
Contents: The lecture will introduce the economic, political, and cultural environment that influence business in Korea. Through a mixture of lectures, case studies, and discussions, students will study how foreign companies and managers do business in Korea. The contents will include market entry, marketing, and human resource management.	
Examination: Written examination (90 minutes)	3 C

Examination requirements:	
• Demonstration of knowledge in doing business in Korea, • demonstration of the ability to apply theoretical knowledge to practical business challenges in Korea.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Fabian Froese
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 2 - 3
Maximum number of students: not limited	

Georg-August-Universität Göttingen **Module M.WIWI-QMW.0001: Generalized Regression**	6 C 4 WLH

Learning outcome, core skills: The students - gain an overview on extended regression modelling techniques that allow to analyse data with non-normal responses. - learn about approaches for modeling nonlinear effects in scatterplot smoothing. - get an introduction to additive models and mixed models for complex regression analyses. - learn how to implement these approaches using statistical software packages.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Generalized Regression (Lecture) *Contents*: Generalized linear models (binary and Poisson regression, exponential families, maximum likelihood estimation, iteratively weighted least squares regression, tests of hypotheses, confidence intervals, model selection and model checking, categorical regression models), nonparametric smoothing techniques (penalized spline smoothing, local smoothing approaches, general properties of scatterplot smoothers, choosing the smoothing parameter, bivariate and spatial smoothing, generalized additive models), mixed models, quantile regression Literatur: Fahrmeir, Kneib, Lang, Marx (2013): Regression - Models, Methods and Applications, Springer.	2 WLH
Course: Generalized Regression (Tutorial) *Contents*: Generalized linear models (binary and Poisson regression, exponential families, maximum likelihood estimation, iteratively weighted least squares regression, tests of hypotheses, confidence intervals, model selection and model checking, categorical regression models), nonparametric smoothing techniques (penalized spline smoothing, local smoothing approaches, general properties of scatterplot smoothers, choosing the smoothing parameter, bivariate and spatial smoothing, generalized additive models), mixed models, quantile regression	2 WLH
Examination: Written examination (90 minutes) or oral examination (approx. 20 minutes)	6 C

Examination requirements: In the exam, the students demonstrate their ability to choose, fit and interpret extended regression modeling techniques. They show a general understanding of the derived estimates and their interpretation in various contexts. The students are able to implement complex regression models using statistical software and to interpret the corresponding results. The exam covers contents of both the lecture and the exercise class.	

Admission requirements:	**Recommended previous knowledge:**

none	Module B.WIWI-QMW.0001: Linear Models
Language: English	**Person responsible for module:** Prof. Dr. Thomas Kneib
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 2
Maximum number of students: not limited	

Additional notes and regulations: The actual examination will be published at the beginning of the semester.

Georg-August-Universität Göttingen **Module M.WIWI-QMW.0002: Advanced Statistical Inference (Likelihood & Bayes)**	6 C 4 WLH

Learning outcome, core skills: Upon completion of the module, the students have acquired the following competencies: • foundations and general properties of likelihood-based inference in statistics, • bayesian approaches to statistical learning and their properties, • implementation of both approaches in statistical software using appropriate numerical procedures.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Advanced Statistical Inference (Likelihood & Baye) (Lecture) *Contents*: The likelihood function and likelihood principles, maximum likelihood estimates and their properties, likelihood-based tests and confidence intervals (derived from Wald, score, and likelihood ratio statistics), expectation maximization algorithm, Bootstrap procedures (estimates for the standard deviation, the bias and confidence intervals), Bayes theorem, Bayes estimates, Bayesian credible intervals, prior choices, computational approaches for Bayesian inference, model choice, predictions Literatur: Held, Sabanes Bové (2014): Applied Statistical Inference, Springer	2 WLH
Course: Advanced Statistical Inference (Likelihood & Bayes) (Exercise) *Contents*: The likelihood function and likelihood principles, maximum likelihood estimates and their properties, likelihood-based tests and confidence intervals (derived from Wald, score, and likelihood ratio statistics), expectation maximization algorithm, Bootstrap procedures (estimates for the standard deviation, the bias and confidence intervals), Bayes theorem, Bayes estimates, Bayesian credible intervals, prior choices, computational approaches for Bayesian inference, model choice, predictions	2 WLH
Examination: Written examination (90 minutes) or oral examination (approx. 20 minutes)	6 C

Examination requirements: The students demonstrate their general understanding of likelihood-based and Bayesian inference for different types of applications and research questions. They know about the advantages and disadvantages as well as general properties of both approaches, can critically assess the appropriateness for specific problems, and can implement them in statistical software. The exam covers contents of both the lecture and the exercise class.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Thomas Kneib

Course frequency:	Duration:
every year	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**
twice	1 - 2
Maximum number of students:	
not limited	

Additional notes and regulations:
The actual examination will be published at the beginning of the semester.

Georg-August-Universität Göttingen **Module M.WIWI-QMW.0009: Introduction to Time Series Analysis**	6 C 4 WLH

Learning outcome, core skills: The students: • learn concepts and techniques related to the analysis of time series and forecasting, • gain a solid understanding of the stochastic mechanisms underlying time series data, • learn how to analyse time series using statistical software packages and how to interpret the results obtained.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Introduction to Time Series Analysis (Lecture) *Contents*: Classical time series decomposition analysis (moving averages, transformations of time series, parametric trend estimates, seasonal and cyclic components), exponential smoothing, stochastic models for time series (multivariate normal distribution, autocovariance and autocorrelation function), stationarity,spectral analysis, general linear time series models and their properties, ARMA models, ARIMA models, ARCH and GARCH models. **Literature** Kreiß & Neuhaus (2006): Einführung in die Zeitreihenanalyse, Springer. Rinne & Specht (2002): Zeitreihen - Statistische Modellierung, Schätzung und Prognose, Vahlen. Chat¿eld (2003): The Analysis of Time Series: An Introduction, Chapman & Hall / CRC Shumway & Sto¿er (2006): Time Series Analysis and its Applications, Springer Schlittgen & Streitberg (2001): Zeitreihenanalyse, Oldenbourg. Lütkepohl & Krätzig (2010): Applied Time Series Econometrics (Themes in Modern Econometrics), Cambridge University Press.	2 WLH
Course: Introduction to Time Series Analysis (Tutorial) *Contents*: Practical and theoretical exercises covering the content of the lecture. Implementation of time series models and estimation by common statistical software (e.g. R or Matlab). Interpretation of estimation results.	2 WLH
Examination: Written examination (90 minutes)	6 C

Examination requirements: The students show their ability to analyze time series using specific statistical techniques, can derive and interpret properties of stochastic models for time series, and can decide on appropriate models for given time series data. The students are able to implement time series analyses using statistical software and to interpret the corresponding results. The exam covers contents of both the lecture and the exercise class.	

Admission requirements:	Recommended previous knowledge:

50	

Georg-August-Universität Göttingen	6 C
Module M.WIWI-QMW.0010: Multivariate Statistics	4 WLH

Learning outcome, core skills:	**Workload:**
The students: • learn the basic concepts of multivariate data analysis, • know how to apply the most common methods of multivariate statistics in practice, • learn how to implement multivariate statistical approaches using the software package R, • know how to interpret the results of multivariate data analyse.	Attendance time: 56 h Self-study time: 124 h

Course: Multivariate Statistics (Lecture)	2 WLH
Contents: Multivariate distributions and their properties, multivariate normal distribution, principal component analysis, factor analysis, discriminant analysis, cluster analysis **Literatur:** Everitt, B. S. and Hothorn, T. (2011): An Introduction to Applied Multivariate Analysis with R, Springer.	
Course: Multivariate Statistics (Exercise) *Contents*: Multivariate distributions and their properties, multivariate normal distribution, principal component analysis, factor analysis, discriminant analysis, cluster analysis	2 WLH
Examination: Written examination (90 minutes) or oral examination (approx. 20 minutes) **Examination prerequisites:** Exercises (50% successful completion)	6 C

Examination requirements:	
In the exam, the students demonstrate that they are able to apply the basic concepts of multivariate statistics. They can decide for a suitable procedure given an applied problem, implement the approach in statistical software and interpret the results. The exam consists of material from both the lecture and the exercise class.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Thomas Kneib

Georg-August-Universität Göttingen **Module M.WIWI-QMW.0011: Advanced Statistical Programming with R**	6 C 2 WLH

Learning outcome, core skills: The students acquire advanced understanding of programming concepts in the statistical programming environment R. They learn how to independently implement advanced statistical methodology and how to structure a large programming project. They furthermore develop abilities in debugging and optimizing R code and to present and document the results of their programming project.	**Workload:** Attendance time: 28 h Self-study time: 152 h

Course: Advanced Statistical Programming with R (Seminar) *Contents*: The students work on advanced statistical programming projects using methods and techniques they got to know in the "Introduction to R". This involves implementation of advanced statistical methodology, utilising tools for debugging and profiling code and documenting the code. The progress of the projects is documented in a presentation and a written report. **Literatur:** Wickham (2014): Advanced R, Chapman & Hall/CRC	2 WLH
Examination: Term paper (max. 15 pages) **Examination prerequisites:** Two presentations (each ca. 20 minutes)	6 C

Examination requirements: The students work on a programming project with the goal of implementing a given statistical approach in an R package. The programming project is worked on in groups of up to three students. The students document their work in terms of the documentation for their R package and a written report of approximately 15 pages.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Thomas Kneib
Course frequency: once a year	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 2
Maximum number of students: 30	

Georg-August-Universität Göttingen **Module M.WIWI-WIN.0001: Modeling and System Development**	6 C 2 WLH

Learning outcome, core skills: Upon successful completion, students are able to: • describe and explain the principles and elements of modeling techniques and design possibilities of systems, • apply selected methods for modeling systems independently, • select an appropriate method for modeling a task and delineate versus the benefits of other methods, • outline the development of systems in the business environment and to evaluate and to transfer this to related situations, • analyze and reflect critically selected current trends in the field of system development in group work and • work in groups on tasks with the help of acquired communication and organizational skills.	**Workload:** Attendance time: 28 h Self-study time: 152 h

Course: Modeling and System Development (Lecture) *Contents*: • Basics of systems, models and Software development • System survey (information retrieval and areas of analysis) • Process-oriented analysis and process modeling • Object-oriented analysis and process modeling • Design of systems • Implementation of systems • Integration of systems • Quality management in system development • Configuration management and change management • Cost estimate of system developments	2 WLH
Examination: Written examination (120 minutes) **Examination prerequisites:** Two successfully passed case studies (max. 12 pages each).	6 C

Examination requirements: Students show in the exam that they • can explain, evaluate and apply theories and concepts for modeling processes, application systems and software, evaluate and apply, • can explain and assess what they learned in the lectures regarding aspects of system development , • can analyze complex problems in system development in a short time and can identify both challenges and solutions, • are able to transfer the approaches teached in the lectures to similar problems.	

Admission requirements: none	**Recommended previous knowledge:** none

Language:	Person responsible for module:
English	Prof. Dr. Matthias Schumann

Georg-August-Universität Göttingen **Module M.WIWI-WIN.0002: Integrated Application Systems**	6 C 2 WLH

Learning outcome, core skills: After successful participation in the module, students are able to: • describe and explain the theoretical foundations in connection with integrated theory, • distinguish essential aspects of horizontal and vertical integration and to explain the implementation in integration concepts, • explain and analyze the most important application system types, • explain and evaluate integrated information processing in various economic applications using practical examples, as well as apply and transfer them to related situations, • analyze and critically reflect selected current trends in the field of integrated information processing, • work on tasks in teamwork with the help of learned communication and organizational skills.	**Workload:** Attendance time: 28 h Self-study time: 152 h

Course: Integrated Application Systems (Lecture) *Contents*: • Presentation of the basics of application systems and integration, IT governance, • presentation of objectives and limits of integration as well as different application system architectures and underlying integration concepts, • presentation of electronic data exchange and introduction to Semantic Web and ontologies, • presentation of integrated application systems in the context of CRM, enterprise portals, integrated debtors management, supply chain management, efficient consumer response, integrated production, payment traffic systems, travel distribution systems, and integrated systems in the media industry.	2 WLH
Examination: Written examination (120 minutes) **Examination prerequisites:** Three successfully certified works on case studies.	

Examination requirements: In the exam, students will prove that they: • are able to explain and assess theories and concepts for the integration of application systems, • are able to analyze complex tasks within the framework of integrated information processing in a short period of time and are able to identify both challenges and solution, • are able to transfer lecture-based approaches to comparable problems.	

Admission requirements: none	**Recommended previous knowledge:** none

Georg-August-Universität Göttingen **Module M.WIWI-WIN.0003: Information Management**	6 C 4 WLH

Learning outcome, core skills: Die Studierenden: • kennen die Rolle und Aufgaben der IT-Organisation innerhalb von Unternehmen, sowie die Veränderungen der letzten Jahre, • kennen die unternehmensinternen, unternehmensexternen und unternehmens-übergreifenden Anforderungen an ein modernes Informationsmanagement und können darlegen, welche Defizite in der Praxis häufig existieren, • kennen detailliert das Modell, die Grundsätze und die Ziele des integrierten Informationsmanagements mit seinen Domänen, • können die Konzepte und Werkzeuge des integrierten Informationsmanagements reflektieren, auf eine Problemstellung anwenden und schriftlich dokumentieren, • können wissenschaftliche Artikel aus dem Kontext des Informationsmanagements verstehen und diskutieren, • können wissenschaftliche Fragestellungen des Informationsmanagements mit den Methoden der Wirtschaftsinformatik eigenständig und adäquat bearbeiten.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Informationsmanagement (Lecture) *Contents*: • Informationsmanagement - Einführung & Grundlagen • IT-Absatzmanagement • IT-Produktionsmanagement • IT-Beschaffungsmanagement • Strategisches IT Management • Digital Business Management – Einführung & Grundlagen • Digital Resources • Digital Demand • Digital Business Models • Digital Business Ecosystems • Ausgewählte Anwendungsdömänen von Informationssystemen: Smart Mobility, Digital Health, Industrie 4.0 etc. • Highlights / Q&A	2 WLH
Course: Informationsmanagement (Exercise)	2 WLH
Examination: Klausur (120 Minuten) oder mündliche Prüfung (Einzel- oder Gruppenprüfung; ca. 15 Minuten) **Examination prerequisites:** Die Anwesenheit bei Gastvorträgen, die im Rahmen des Moduls stattfinden können, ist verpflichtend und gilt als Prüfungsvorleistung. Nichtteilnahme/Abwesenheit bei der Erbringung von Prüfungsvorleistungen kann zum Ausschluss von der Prüfung führen.	6 C

Examination requirements: Die Studierenden weisen in der Modulprüfung nach, dass sie neben der Wiedergabe von Grundlagen und Konzepten aus dem Bereich des integrierten	

Informationsmanagements auch in der Lage sind anhand von Fallbeispielen ihr gewonnenes Wissen lösungsorientiert einzusetzen.

Dieses beinhaltet insbesondere den Transfer von Wissen über das Informationsmanagement auf Anwendungsfälle sowie die Anwendung von Werkzeugen aus dem Spektrum der Wirtschaftsinformatik. Ebenso sind die Studierenden in der Lage, kritisch das in den Modellen vorgeschlagene Vorgehen zu würdigen und während der Anwendung auf ein Problemfeld geeignet zu adaptieren.

Maximum number of students: 30	

Georg-August-Universität Göttingen **Module M.WIWI-WIN.0008: Change & Run IT**	6 C 4 WLH

Learning outcome, core skills: The students: • know the fundamentals and key concepts of IT Service Management and IT Project Management, • describe and explain the contents of the ITIL® framework and its core elements in detail: Service Value System, Service Value Chain, General Management Practices, Service Management Practices and Technical Management Practices, • demonstrate profound knowledge in IT Innovation Management, agile concepts, and design thinking, • understand and elaborate the success factors for IT Service Management and IT Project Management, • and should be able to apply standard frameworks in the context of IT Service Management and IT Project Management.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Change and Run IT (Lecture) *Contents*: • Basic elements of IT Service Management • ITIL Service Value System • ITIL Service Value Chain • IT Innovation Management • Business Model Concept & Innovation • Design Thinking • IT Project Management • ITIL Management Practices	2 WLH
Course: Change and Run IT (Tutorial) *Contents*: • Application of knowledge and best practices of IT Service Management, IT Project Management, and IT Innovation Management, • case studies covering the implementation of ITIL® recommended methods, • deep dive into selected General Management Practices, Service Management Practices, and Technical Management Practices, • live demos of selected information systems that enable ITIL® compliant workflows.	2 WLH
Examination: Written examination (90 minutes) **Examination prerequisites:** The attendance of guest lectures which may be part of the module are obligatory and are considered an integral part of the examinable contents of the class.	6 C
Examination requirements: In the module examination, the students demonstrate that they are able to reproduce fundamental knowledge and basic concepts of IT Service Management, IT Project Management, and IT Innovation Management. Besides, they can apply acquired knowledge within the lecture and tutorials in a solution-oriented manner. In particular,	

this includes transferring knowledge from the ITIL framework to different fields of application and the utilization of IT service management methods. In addition, the students are able to critically assess the proposed procedures and adapt these to specific problem areas.

Admission requirements:	Recommended previous knowledge:
none	none
Language:	**Person responsible for module:**
English	Prof. Dr. Lutz M. Kolbe
Course frequency:	**Duration:**

Additional notes and regulations:

The module is offered in each semester. In the summer term, lecture and tutorial take place regularly, whereas in the winter term only the tutorial is offered, and the lecture must be prepared through self-study which is based on the recorded lecture of the respective previous summer semester.

Georg-August-Universität Göttingen **Module M.WIWI-WIN.0009: Software & Internet Economics**	4 C 2 WLH

Learning outcome, core skills: After successful participation in the module, students are able to: • describe the principles of internet economy from a theoretical and practical viewpoint and explain them, • explain the properties of digital wares, networks, and network effects and clarify them through the help of practical examples, • explain the essential economic principles of the music industry and the foundations of its value creation, • assess possible pricing strategies of the music industry and point out future solutions, • reflect on strategic and organizational aspects of off-shoring, • work on tasks in groups, applying previously attained communication and organization abilities.	**Workload:** Attendance time: 28 h Self-study time: 92 h

Course: Software & Internet Economics (Online lecture) *Contents*: Foundations of Digital Web Economy: • properties of digital wares, • chances and risks in the supply of digital wares, • network effects and corresponding markets, • practical example: Digital wares. Digitization: • foundations of digitization, • data as the basis for business models, • Change of the value creation chain, • multi-channel management, • practical example: E-Books. The Software Industry: • overview and economic principles, • strategies for the software industry (e.g. pricing and sales strategies), • practical example: Cloud Computing.	2 WLH
Examination: Written examination (120 minutes)	4 C

Examination requirements: In the exam, students will prove that they: • are able to explain and assess theories and concepts regarding the integration of application systems, • are able to analyze complex tasks concerning integrated information processing in a short span of time and point out challenges as well as possible solutions,	

- are able to transfer previously studied, lecture-based approaches onto similar problems.

Admission requirements: none	Recommended previous knowledge: none
Language: German	Person responsible for module: Prof. Dr. Matthias Schumann
Course frequency: each summer semester	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: 1 - 3
Maximum number of students: not limited	

Georg-August-Universität Göttingen	6 C
Module M.WIWI-WIN.0019: Business Analytics	3 WLH

Learning outcome, core skills:	**Workload:**
After a successful completion of the course students are able to:	Attendance time:
	42 h
• Understand the basic principles of business intelligence (BI) and decision support systems (DSS).	Self-study time:
• Know and apply a skillset suited for addressing unstructured decision situations that require advanced data processing and analysis.	138 h
• Understand and apply data and text mining methods to analyze both structured and unstructured data.	
• Understand and evaluate methods and tools required in modern performance management.	

Course: Business Analytics (Lecture)	2 WLH
Contents:	
1. Conceptual, methodological and technical foundations of Business Intelligence and Decision Support Systems	

• Types of decision and control
• Phases of the decision-making process
• Business-related decision support

2. System components needed for the collection, analysis and visualization of structured, semi-structured and unstructured data

• DSS architecture and components
• BI Framework, architecture and components

3. Data mining for Business Intelligence

• The process of knowledge discovery
• Supervised vs. unsupervised learning
• Data and text mining for classification, association and clustering

4. Web and text mining for Business Intelligence

• Web and text mining
• sentiment analysis and opinion mining

5. Business reporting, performance management and visualization

• Business reporting and performance management
• Data visualization and dashboards

Literature:

Sharda, R.; Delen, D.; Turban, E. (2014) Business Intelligence and Analytics: Systems for Decision Support, 10th Ed., Prentice Hall, NJ.

Sabherwal, R.; Becerra-Fernandez, I. (2013) Business Intelligence: Practices, technologies and management, John Wiley & Sons, NY.

Han, J.; Kamber, M.; Pei, J. (2012) Data Mining: Concepts and Techniques, 3rd Ed., Morgan Kaufmann, Waltham, MA.	
Course: Business Analytics (Tutorial) *Contents*: • Case studies that provide insights into the context of managerial decision-making as well as illustrate the major benefits and challenges of IT-based decision support • Tutorial sessions in which students deepen and broaden their theoretical and methodological knowledge from the lectures. • Computer tutorial sessions with RapidMiner and Tableau in which students will apply their knowledge.	1 WLH
Examination: Written examination (90 minutes)	6 C
Examination requirements: • Demonstrate profound knowledge of the theoretical and methodological foundations of business intelligence and decision support systems. • Document an understanding of the concepts behind managerial decision-making and Simon's phases of the decision-making process. • Demonstrate an understanding of relevant system components, methods and approaches providing managerial decision support. • Show a profound understanding of methods and techniques to efficiently complete data mining projects.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Jan Muntermann
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1 - 3
Maximum number of students: not limited	

Georg-August-Universität Göttingen **Module M.WIWI-WIN.0026: Machine Intelligence: Concepts and Applications**	6 C 2 WLH

Learning outcome, core skills: The course would introduce the context of computational algorithms in broader areas of Machine Learning, Data Mining, Signal Processing, and Image Processing. The course would remain focused on the study of machine learning and fuzzy computing algorithms with practical applications to Computer Vision, eHealth & mHealth, and Water Distribution System. At the end of the course, the participants should be capable of applying intelligent computing algorithms to address the challenging issue of "uncertainties" in the real-world problems related to data modeling and analysis.	**Workload:** Attendance time: 28 h Self-study time: 152 h

Course: Machine Intelligence: Concepts and Applications (Lecture) *Contents*: • Artificial Intelligence and Machine Learning • Stochastic Approach to Modeling • Fuzzy Approach to Modeling • Image Matching Applications • Biomedical Signal Processing Applications in eHealth and mHealth • Big Data Analysis Applications in Water Distribution System Modeling	2 WLH
Examination: Written examination (90 minutes)	6 C

Examination requirements: A demonstration of following capabilities: • problem formulation of a selected practical application of artificial intelligence and machine learning, • analytical/computational solution of the formulated problem, • algorithmic implementation of the solution, • computer simulations.	

Admission requirements: none	**Recommended previous knowledge:** Basics of Matrix Algebra, Basics of Signals & Systems
Language: English	**Person responsible for module:** Prof. Dr. Lutz M. Kolbe Prof. Dr.-Ing. habil. Mohit Kumar
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 1 - 4
Maximum number of students: 20	

Georg-August-Universität Göttingen Module M.WIWI-WIN.0027: Seminar on Writing Research Papers in the Information Systems Discipline	12 C 2 WLH

Learning outcome, core skills: After successful participation in the module, students are able to: • describe and explain the theoretical foundations of a given topic in the information systems discipline, • discuss existing research findings and apply them on a selected topic of information systems, • develop own research findings based on existing literature, • evaluate the findings, • write a scientific paper, • present the results of the work in front of an audience and • discuss critical questions ad hoc on the selected topic.	Workload: Attendance time: 28 h Self-study time: 332 h

Course: Seminar on Writing Research Papers in the Information Systems Discipline (Seminar) *Contents*: • Basics of writing scientific research papers in information systems, • basics of reviewing scientific research paper in information systems, • writing a scientific research paper, • presentation of results of the written scientific article. *Course frequency:* each winter semester	
Examination: Term paper as a scientific research paper (max. 15 pages) with presentation (about 20 minutes + about 20 minutes discussion) **Examination prerequisites:** Active participation in the seminar and writing a scientific review.	12 C

Examination requirements: In the exam, students will prove that they are able to: • analyze a given scientific problem in information systems and address it with the help of scientific literature as well as scientific procedures, • reflect on research findings critically and identify improvements, • write a scientific article and present the results, • answer critical questions about the written scientific article and the presentation, • be present at all seminar meetings.	

Admission requirements: none	Recommended previous knowledge: none
Language: German, English	**Person responsible for module:** Dr. Sebastian Hobert
Course frequency: irregular	**Duration:** 1 semester[s]

Number of repeat examinations permitted:	Recommended semester:
twice	1 - 3
Maximum number of students:	
12	

Georg-August-Universität Göttingen **Module M.WIWI-WIN.0028: Crucial Topics in Information Security Management**	12 C 2 WLH

Learning outcome, core skills: The students: • know the state of the art as well as future challenges regarding a current research topic in the field of information security research, • can synthesize the existing body of knowledge in regard to a given topic in the area of information security management research and identify research gaps, • can elaborate research questions systematically by means of scientific methods, • know and understand empirical research methods and approaches in order to elaborate on information security research topics in a scientific manner, • can present research findings in a way that satisfies scientific requirements.	**Workload:** Attendance time: 28 h Self-study time: 332 h

Course: Crucial Topics in Information Security Management (Seminar) *Contents*: This seminar comprises of three parts. In the first part (2 days), students will receive an introduction to current challenges in information security management research. Moreover, they will get an overview on empirical research designs and methods. An introduction and training of a specific empirical research method will be given. In the second part (self-study), students will select a research topic in the field of information security management research. Students will have the chance to conduct their own piece of research. This usually includes the collection and/or analysis of empirical data. A research report needs to be written. In the third part, the results will be presented in front of the class.	2 WLH
Examination: Presentation (approx. 30 minutes) with written elaboration (max. 8000 words) **Examination prerequisites:** Regular attendance	12 C

Examination requirements: • Elaboration of a current topic in information security management research, • written seminar paper, • oral presentation of the seminar paper's findings, • collaboration with other students in teams.	

Admission requirements: None	**Recommended previous knowledge:** M.WIWI-WIN.0003 Information Management, Statistics (or an equivalent basic understanding of empirical research methods)
Language: English	**Person responsible for module:** Prof. Simon Trang
Course frequency: each summer semester	**Duration:** 1 semester[s]

Number of repeat examinations permitted:	Recommended semester:
twice	2 - 4
Maximum number of students:	
20	

Georg-August-Universität Göttingen Module M.WIWI-WIN.0032: Information Systems Research	12 C 2 WLH

Learning outcome, core skills:	Workload:
The aim of this seminar is to introduce students to scientific research and scientific writing in the field of information systems. After successful completion of this module, the students have gained in-depth insights into a specific topic in information systems research. Through the mixture of guided introduction and independent work on a clearly defined topic, students develop a basic understanding of the principles of empirical scientific work and acquire the ability to approach a research topic systematically and independently. Students can conduct a systematic review of the scientific literature and are able to develop and derive scientific solutions and findings on this foundation. Depending on their topic, they gather experiences in the application of an empirical method or the implementation of a digital solution. They develop their skills in synthesizing, conducting, presenting, and reflecting on scientific research. In addition to promoting analytical thinking, this seminar will also facilitate the improvement of English writing, presentation, and discussion skills.	Attendance time: 28 h Self-study time: 332 h

Course: Information Systems Research (Seminar) Contents: This seminar deals with current issues in information systems research. Topics include digital strategy and business models, digital platforms, sharing economy, IT innovations, the impact of technologies on decisions, interactions and lives of individuals, among others. Based on their interests, students are assigned to a specific topic to examine. The structure of the seminar is as follows: 1. Introduction to the principles of academic research and scientific writing, 2. Examination of the topic and the research question - Investigation of the theoretical and methodological foundations - Structured analysis of the current state of research - Problem solving - Analysis and structuring of the results - Reflection, 3. Preparation of the term paper, 4. Presentation and discussion of the results.	2 WLH

Examination: Term paper (max. 8000 words) and presentation (approx. 30 minutes)	12 C

Examination requirements:	
• Demonstration of in-depth knowledge on the assigned topic, • proof of an understanding of scientific work, writing, and presenting in general and the application of their selected research method in particular, • evidence of the ability to abstract and reflect the results of the analysis.	

Admission requirements:	Recommended previous knowledge:
none	none
Language:	Person responsible for module:
English	Prof. Dr. Manuel Trenz

Course frequency: each summer semester	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: 2 - 3
Maximum number of students: 10	

Georg-August-Universität Göttingen **Module M.WIWI-WIN.0033: Digital Platforms**	6 C 4 WLH

Learning outcome, core skills: The objective of this course is to convey a basic understanding of the paradigms and intricacies of digital platforms and platform business models. Students will be able to apply this knowledge to critically analyze and evaluate digital platform approaches. Moreover, it equips them with the necessary theories and models to develop strategies for digital platforms and to assess current issues in the topic area quantitatively and qualitatively. In the exercise part of the course, students apply their acquired knowledge and thereby advance their problem solving skills.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Digital Platforms (Lecture) *Contents*: Digital platforms are becoming increasingly important. Two-sided markets complement, extend, and replace traditional modes of transacting in many domains. Examples include B2B and B2C e-commerce platforms, platforms for interorganizational integration, resale and auction platforms, crowd work, delivery services as well as P2P services, such as short-term accommodation sharing and ride sharing markets. Importantly, the platform principle bears several particularities which will be examined in this course. Central to the design and operation of digital platforms and associated business models is the existence of network effects, different user types and motives, and the paramount importance of reputation systems and management. Case studies and guest lectures can complement the course. Topics covered in this course include: • The economics of platforms and multi-sided markets • Platform business models • Strategies for starting digital platforms • Competition among and within digital platforms • Platform governance • User motives, types, and representations on digital platforms • Pricing strategies for and on digital platforms • Trust and reputation systems • Network analysis	2 WLH
Course: Digital Platforms (Exercise) *Contents*: Within the accompanying exercise, the students deepen and extend the knowledge and skills acquired in the lecture by means of application tasks and examples.	2 WLH
Examination: Written examination (90 minutes)	6 C

Examination requirements: • Demonstration of in-depth knowledge on the paradigms and intricacies of digital platforms and platform business models, • evidence of the ability to quantitively and qualitatively address current issues on digital platforms.	

Admission requirements:	Recommended previous knowledge:
none	basic Excel skills
Language:	**Person responsible for module:**

Georg-August-Universität Göttingen	6 C
Module M.iPAB.0003: Statistical genetics, breeding informatics and experimental design	4 WLH

Learning outcome, core skills:	**Workload:**
Novel biotechnological methods allow the production of very large data sets (gene sequences, genotypes, transcriptomes) at decreasing costs. Students learn about statistical and computational methods to use these records for breeding issues. Furthermore, the main experimental designs to plan, implement, and evaluate targeted and efficient experiments for data generation will be treated.	Attendance time: 56 h Self-study time: 124 h

Course: Statistical genetics, breeding informatics and experimental design	4 WLH
(Lecture, Exercise) *Contents*: - Gene Expression Analysis - Genome-wide association analysis - QTL mapping - Statistical hypothesis testing - Regression methods - Analysis of variance - Multiple testing - Experimental designs (block designs, randomized designs, Latin squares) - Sample size estimation - Introduction to programming - Fundamentals of databases Literature: Andrea Foulkes: Applied Statistical Genetics with R; Francis O'Donnel: Statistical Experiment Design and Interpretation; An Introduction with Agricultural Examples	
Examination: Written examination (60 minutes) **Examination requirements:** Profound knowledge of statistic and informatics methods to use them for breeding issues.	6 C

Admission requirements: none	Recommended previous knowledge: Basics in statistics and genetics
Language: English	Person responsible for module: Prof. Dr. Armin Schmitt
Course frequency: each winter semester	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester:
Maximum number of students: 20	

Georg-August-Universität Göttingen **Module M.iPAB.0014: Data Analysis with R**	3 C 2 WLH

Learning outcome, core skills: The students will be able to use methods provided by the statistical package R to perform the analysis of data sets that are typical in the life sciences. A core skill is the identification, usage and evaluation of online resources (e.g. packages and data sets).	**Workload:** Attendance time: 28 h Self-study time: 62 h

Course: Data Analysis with R (Block course, Lecture, Exercise) *Contents*: The fundamental concepts of the programming package R will be presented and deepened during practical exercises. Statistical methods will be recapitulated if necessary. Special emphasis is put on visualization methods. Literature: Wiki-book "R programming" https://en.wikibooks.org/wiki/R_Programming "R for Beginners" by Emanuel Paradis https://cran.r-project.org/doc/contrib/Paradis-rdebuts_en.pdf "R tips" by Paul E. Johnson http://pj.freefaculty.org/R/Rtips.pdf	2 WLH
Examination: Oral examination (approx. 20 minutes) **Examination requirements:** Ability to analyze typical data sets with the statistical package R and interpretation of the results.	3 C

Admission requirements: none	Recommended previous knowledge: Knowledge of basic statistics concepts
Language: English	**Person responsible for module:** Prof. Dr. Armin Schmitt
Course frequency: each semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** Master: 4
Maximum number of students: 24	

Georg-August-Universität Göttingen **Module M.iPAB.0015: Applied Machine Learning in Agriculture with R**	6 C 4 WLH

Learning outcome, core skills: Modern agricultural research involves more and more the analysis of large datasets comprising mesaurements of several variables. This module aims to teach interested students fundamental analysis skills that permit them to cope with such data sets. In more detail, the techniques that will be treated include: • clustering • artificial neural networks • support vector machine • decision trees • random forests • feature selection Involved mathematical formalism will be avoided. The focus is rather on: • gaining an intuitive understanding of the techniques • to develop an understanding about which type of problem can be treated with which technique • the application of the techniques using machine learning-functions under R • the graphical visualisation of the results • and the interpretation of the results The teaching will be based on the analysis of published real data sets from agricultural research projects as far as possible.	**Workload:** Attendance time: 56 h Self-study time: 124 h

Course: Applied Machine Learning in Agriculture with R (Block course) *Contents*: The course consists of lectures, exercises and project work. After the lectures and the exercises the students will have to carry out a project work that must be finished within eight weeks after the end of the lectures. The students as well as the other research groups are welcome to suggest topics, possibly questions related to their master thesis can be treated. The project work should be a concise written report of about ten pages in which one or several of the techniques that were treated in the course are applied.	4 WLH
Examination: Oral examination (approx. 20 minutes, 60%) and term paper (max. 10 pages, 40%) **Examination requirements:** • Knowledge about the analysis of big-data sets with the statistical package R and interpretation of the results. • Knowledge about different clustering algorithms • Analysis of real agricultural data sets by applying different machine learning-functions under R • Knowledge about feature selection approaches	6 C

Admission requirements: Recommended previous knowledge: Basic knowledge of R	**Recommended previous knowledge:** none
Language: English	**Person responsible for module:** Prof. Dr. Armin Schmitt
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: 25	

Georg-August-Universität Göttingen	6 C
Module M.iPAB.0017: Applied Bioinformatics with R	4 WLH

Learning outcome, core skills:	**Workload:**
This module will cover the fundamental concepts of bioinformatics. Topics will include usage of relevant/modern biological databases and tools that are required to perform different analyses. Further, an introduction to multi-omics-data will be given, including genome, trancriptome and proteome analysis. This module aims to teach interested students fundamental analysis skills to evaluate biological data using bioinformatic techniques, and to become proficient in performing such analyses.	Attendance time: 56 h Self-study time: 124 h

In more detail, following topics will be treated:

- Analysis of multi-omics data
- Standard databases in bioinformatics
- DNA sequence and genome analysis
- Variant calling techniques
- Sequence alignment
- Gene regulatory network analysis
- Clustering

The lecture will be based on the analysis of real data sets from agricultural research projects as far as possible.

Course: Applied Bioinformatics with R (Lecture, Exercise)	4 WLH
Contents: The course consists of lectures, exercises and a project work. After the lectures and the exercises the students will have to carry out a project work that must be finished within ten weeks after the end of the lectures. The students as well as the other research groups are welcome to suggest topics, possibly questions related to their master thesis can be treated. The project work should be a concise written report of about ten pages in which one or several of the techniques that were treated in the course are applied.	

Examination: Oral examination (approx. 20 minutes, 75%) and term paper (max. 10 pages, 25%)	6 C
Examination requirements:	

- Knowledge about the fundamental concepts of bioinformatics
- Knowledge about different databases in bioinformatics
- Analysis of biological data, interpretation and modeling og biological information and applying this to the solution of biological problems in any area involving molecular data.

Maximum number of students: not limited	

Georg-August-Universität Göttingen **Module S.RW.1233: Telecommunications Law**	6 C 2 WLH

Learning outcome, core skills: Nach erfolgreichem Absolvieren des Moduls „Telekommunikationsrecht" • haben die Studierenden grundlegende Kenntnisse des Telekommunikationsrechts (wirtschaftliche und verfassungsrechtliche Grundlagen, Zugangs- und Entgeltregulierung sowie weitere Regelungsgehalte des Telekommunikationsgesetzes) erlangt, • haben die Studierenden gelernt, die verschiedenen Phasen der Zugangsregulierung und die Arten der Entgeltregulierung zu differenzieren, • kennen die Studierenden die verfassungsrechtlichen Grundlagen des Telekommunikationsrechts, Grundzüge der Organisation der Bundesnetzagentur und des regulierungsbehördlichen Verfahrens, Grundzüge der besonderen Missbrauchsaufsicht, des Kundenschutzes sowie der Nummern- und Frequenzordnung, • kennen die Studierenden die dogmatischen Konzeptionen des Telekommunikationsrechts in ihrer systematischen, ideellen und praktischen Bedeutung, • kennen die Studierenden die Methoden der Gesetzesauslegung (Wortlaut, systematische, historische, teleologische Auslegung) und können diese anwenden, • können die Studierenden die spezifische regulierungsrechtliche Technik der Falllösung anwenden, • sind die Studierenden in der Lage, die erworbenen Kenntnisse bei der Lösung einschlägiger Fälle umzusetzen und sich mit den aufgeworfenen Rechtsfragen kritisch auseinanderzusetzen.	**Workload:** Attendance time: 28 h Self-study time: 152 h

Course: Telekommunikationsrecht (Lecture)	2 WLH
Examination: Mündlich (ca. 15 Min.) oder Klausur (90 Min.) oder Hausarbeit (max. 10 Seiten).	6 C

Examination requirements: Durch die Modulprüfung weisen die Studierenden nach, dass sie, • grundlegende Kenntnisse im Telekommunikationsrecht aufweisen, • ausgewählte Tatbestände der Zugangs- und Entgeltregulierung sowie sonstiger Regelungsgegenstände des Telekommunikationsrechts beherrschen, • die zugehörigen methodischen Grundlagen beherrschen und • systematisch an einen telekommunikationsrechtlichen Fall herangehen und diesen in vertretbarer Weise lösen können.	

Admission requirements: none	**Recommended previous knowledge:** Kenntnisse des Allgemeinen Verwaltungsrechts im Umfang des Stoffs der Vorlesung Verwaltungsrecht I
Language: German	**Person responsible for module:** Prof. Dr. Marcel Kaufmann

Course frequency:	Duration:
each winter semester	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**
cf. examination regulations	
Maximum number of students:	
not limited	

Georg-August-Universität Göttingen	6 C
Module S.RW.1317: Criminology I	2 WLH

Learning outcome, core skills:	Workload:
Nach erfolgreichem Absolvieren des Moduls „Kriminologie I" • haben die Studierenden grundlegende Kenntnisse über den Gegenstand und die Aufgaben der Kriminologie erlangt; • haben die Studierenden gelernt, kriminalstatistische Daten zu interpretieren und deren Aussagegehalt zu verstehen; • haben die Studierenden Hintergründe und Auswirkungen der strafrechtlichen Selektion kennengelernt; • kennen die Studierenden die wichtigsten Theorien zur Entstehung von Kriminalität und ihre praktische Bedeutung für die Kriminalprävention; • kennen die Studierenden empirisch-kriminologische Forschungsmethoden und haben Grundkenntnisse über Persönlichkeitsmerkmale und Sozialdaten registrierter Straftäter erlangt; • sind die Studierenden in der Lage, die erworbenen Kenntnisse für eine Analyse von Kriminalitätsstruktur und –entwicklung sowie für kriminalpräventive Überlegungen fruchtbar zu machen.	Attendance time: 28 h Self-study time: 152 h

Course: **Kriminologie I** (Lecture)	2 WLH
Examination: Mündlich (ca. 15 Min.) oder Klausur (90 Min.) oder Hausarbeit (max. 10 Seiten).	6 C

Examination requirements:	
Durch die Modulprüfung weisen die Studierenden nach, dass sie • grundlegende Kenntnisse im Bereich der Kriminologie aufweisen, • ausgewählte Kriminalitätstheorien beherrschen und in der Lage sind, deren Reichweite und Aussagekraft zu bewerten und auf einen konkreten Sachverhalt zu übertragen, • die Interpretation kriminalstatistischer Daten beherrschen und • Grundlagen der empirisch-kriminologische Forschungsmethoden mit ihren jeweilige Stärken und Schwächen kennen und Forschungsergebnisse entsprechend interpretieren können.	

Admission requirements: none	Recommended previous knowledge: none
Language: German	**Person responsible for module:** Prof. Dr. Katrin Höffler
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:**
Maximum number of students:	

not limited	

Georg-August-Universität Göttingen **Module S.RW.1318: Applied Criminology (Criminology II)**	6 C 2 WLH

Learning outcome, core skills: Nach erfolgreichem Absolvieren des Moduls „Angewandte Kriminologie" • haben die Studierenden grundlegende Kenntnisse über die Anwendung kriminologischer Erkenntnisse im Strafrecht erlangt; • haben die Studierenden strafrechtlichen Sanktionen einschl. der Maßregeln der Besserung und Sicherung in ihrer Bedeutung und Wirkung kennengelernt; • kennen die Studierenden empirisch-kriminologische Forschungs-methoden und haben Grundkenntnisse über Persönlichkeitsmerkmale und Sozialdaten registrierter Straftäter erlangt; • kennen die Studierenden Grundlagen der Kriminalprognose; • besitzen die Studierenden Grundkenntnisse im Bereich der Viktimologie und des Umgangs mit Opfern im Strafverfahren; • Beherrschen die Studierenden die Grundlagen der Strafzumessung, Schuldfähigkeit und Schuldfähigkeitsbegutachtung und sind in der Lage, dieses Wissen bei der Lösung einschlägiger Fälle umzusetzen und sich mit den aufgeworfenen kriminologischen Fragen kritisch auseinanderzusetzen.	**Workload:** Attendance time: 28 h Self-study time: 152 h

Course: Angewandte Kriminologie (Lecture)	2 WLH
Examination: Mündlich (ca. 15 Min.) oder Klausur (90 Min.) oder Hausarbeit (max. 10 Seiten).	6 C

Examination requirements: Durch die Modulprüfung weisen die Studierenden nach, dass sie • grundlegende Kenntnisse im Bereich der angewandten Kriminologie aufweisen, • die methodischen Grundlagen der Strafzumessung und der Beurteilung der Schuldfähigkeit beherrschen und damit • systematisch an einen konkreten Sachverhalt herangehen und rechtlich zulässige Sanktionen ermitteln sowie in Einzelfällen eine angezeigte Sanktion vorschlagen können.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: German	**Person responsible for module:** Prof. Dr. Katrin Höffler
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:**
Maximum number of students: not limited	

Georg-August-Universität Göttingen **Module S.RW.1416K: Constitutional Theory**	4 C 2 WLH

Learning outcome, core skills: Nach erfolgreichem Absolvieren des Moduls „Allgemeine Staatslehre" • haben die Studierenden grundlegende Kenntnisse in der Allgemeinen Staatslehre und Vergleichenden Regierungslehre erlangt; • haben die Studierenden gelernt, vergleichende Analysen politischer Systeme vorzunehmen; • kennen die Studierenden die Konzepte der Staatstheorie und die unterschiedlichen politischen Systeme (historisch und vergleichend); kennen die Studierenden die theoretischen Konzeptionen der Allgemeinen Staatslehre in ihrer systematischen, ideellen und praktischen Bedeutung.	**Workload:** Attendance time: 28 h Self-study time: 92 h

Course: Allgemeine Staatslehre (Lecture)	2 WLH
Examination: Written examination (120 minutes)	4 C

Examination requirements: Durch die Modulprüfung weisen die Studierenden nach, dass sie, • grundlegende Kenntnisse in der Allgemeinen Staatslehre aufweisen, • ausgewählte Theoriediskurse auf dem Gebiet der Allgemeinen Staatslehre beherrschen, • die zugehörigen methodischen Grundlagen beherrschen.	

Admission requirements: keine	**Recommended previous knowledge:** keine
Language: German	**Person responsible for module:** Prof. Dr. Thomas Mann
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:**
Maximum number of students: not limited	

Georg-August-Universität Göttingen	4 C
Module S.RW.1418K: Introduction to Legal and Social Philosophy	2 WLH

Learning outcome, core skills:	**Workload:**
Nach erfolgreichem Absolvieren des Moduls „Einführung in die Rechts- und Sozialphilosophie"	Attendance time: 28 h
- haben die Studierenden grundlegende Kenntnisse in der Rechtsphilosophie erlangt; - haben die Studierenden gelernt, verschiedene Bereiche der Rechtsphilosophie zu differenzieren: Rechtstheorie und Rechtsethik; - kennen die Studierenden die grundlegenden Theorien der Rechtstheorie und der Rechtsethik; - kennen die Studierenden die wesentlichen Theorien und Prinzipien der Gerechtigkeit; - kennen die Studierenden die Differenzierung von Positivismus und Nichtpositivismus/Naturrecht; - kennen die Studierenden die Radbruchsche Formel und ihre Anwendungen; - haben die Studierenden wesentliche klassische Autoren der Rechtsphilosophie wie Platon, Aristoteles, Thomas von Aquin, Hobbes, Locke, Kant, Hegel zumindest in Ansätzen kennengelernt.	Self-study time: 92 h

Course: Einführung in die Rechts- und Sozialphilosophie (Lecture)	2 WLH
Examination: Written examination (120 minutes)	4 C

Examination requirements:	
Durch die Modulprüfung weisen die Studierenden nach, dass sie,	
grundlegende Kenntnisse in der Rechtsphilosophie erworben haben.	

Admission requirements:	**Recommended previous knowledge:**
keine	keine
Language:	**Person responsible for module:**
German	Prof. Dr. Dr. Dietmar von der Pfordten
Course frequency:	**Duration:**
each winter semester	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**

Maximum number of students:	
not limited	

Georg-August-Universität Göttingen **Module S.RW.1432K: Sociology of Law**	4 C 2 WLH

Learning outcome, core skills: Nach erfolgreichem Absolvieren des Moduls „Rechtssoziologie" • haben die Studierenden grundlegende Kenntnisse über das interdisziplinäre Fach „Rechtsoziologie" sowie dessen Grundlagen aus den Bezugswissenschaften; • haben die Studierenden gelernt, grundlegende Begriffe wie bspw. „Recht", „Gerechtigkeit" methodisch aufzuarbeiten; • kennen die Studierenden die methodischen Grundlagen der Rechtssoziologie; • sind die Studierenden in der Lage, die erworbenen Kenntnisse systematisch darzustellen, Entwicklungslinien nachzuziehen, Grundlagentexte einzuordnen und kritisch auszuwerten ¿ • sind die Studierenden in der Lage, die erworbenen Kenntnisse bei der Lösung aktueller Probleme umzusetzen und sich mit den aufgeworfenen Rechtsfragen kritisch auseinanderzusetzen.	**Workload:** Attendance time: 28 h Self-study time: 92 h

Course: Rechtssoziologie (Lecture)	2 WLH
Examination: Mündlich (ca. 15 Min.) oder Klausur (120 Min.) oder Hausarbeit (mind. 10 Seiten)	4 C

Examination requirements: Durch die Modulprüfung weisen die Studierenden nach, dass sie, • grundlegende Kenntnisse in der Rechtssoziologie aufweisen, • Grundlagentexte systematisch analysieren können, • die zugehörigen methodischen (auch soziologischen) Grundlagen beherrschen und • systematisch an einen Text oder eine Fragestellung herangehen können und diese/n durch Anwendung der erlernten Methoden fundiert diskutieren können.	

Admission requirements: keine	**Recommended previous knowledge:** keine
Language: German	**Person responsible for module:** Prof. Dr. Katrin Höffler
Course frequency: each summer semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:**
Maximum number of students: not limited	

Georg-August-Universität Göttingen **Module S.RW.2410: Seminar on E-Commerce-Law and Regulation**	12 C 3 WLH

Learning outcome, core skills: Nach erfolgreichem Absolvieren des Moduls „Seminare E-Commerce-Recht und Regulierung" • haben die Studierenden grundlegende Kenntnisse im E-Commerce- und den verschiedenen Bereichen des Regulierungsrechts (insbes. Rundfunkrecht, Wirtschaftsrecht der Medien, Telekommunikationsrecht, Jugendmedienschutzrecht, Datenschutzrecht, Presserecht, E-Commerce and Cyberspace Law, European ICT and Media Law, Europäisches und internationales Wirtschaftsrecht) erlangt; • kennen die Studierenden die Grundlagen von E-Commerce- und Regulierungsrecht und ihre Bedeutung für die digitale Gesellschaft, • kennen die Studierenden die dogmatischen Konzeptionen des E-Commerce- und Regulierungsrechts in ihrer systematischen, ideellen und praktischen Bedeutung, • kennen die Studierenden die Methoden der Gesetzesauslegung (Wortlaut, systematische, historische, teleologische Auslegung) und können diese anwenden; • sind die Studierenden in der Lage, die erworbenen Kenntnisse bei der Lösung einschlägiger Fälle umzusetzen und sich mit den aufgeworfenen Rechtsfragen kritisch auseinanderzusetzen.	**Workload:** Attendance time: 42 h Self-study time: 318 h

Course: Seminare Rechtsgestaltung und Durchsetzung (Lecture)	3 WLH
Examination: Vortrag mit schriftlicher Ausarbeitung (max. 30 Seiten) und Diskussion	12 C

Examination requirements: Durch die Modulprüfung weisen die Studierenden nach, dass sie, • grundlegende Kenntnisse im gewählten Teilgebiet des E-Commerce- und Regulierungsrechts (insbes. Rundfunkrecht, Wirtschaftsrecht der Medien, Telekommunikationsrecht, Jugendmedienschutzrecht, Datenschutzrecht, Presserecht, E-Commerce and Cyberspace Law, European ICT and Media Law, Europäisches und internationales Wirtschaftsrecht) aufweisen, • ausgewählte Tatbestände des gewählten Teilgebiets des Öffentlichen Rechts beherrschen, • die zugehörigen methodischen und theoretischen Grundlagen beherrschen, • die Grundlagen des wissenschaftlichen Arbeitens beherrschen, • eine Fragestellung bearbeiten und in Form eines wissenschaftlichen Textes darstellen können und • ein erarbeitetes Thema vorzutragen und im Rahmen einer Diskussion zu verteidigen wissen.	

Admission requirements: keine	**Recommended previous knowledge:**

	Kenntnisse des E-Commerce- bzw. einzelner Bereiche des Regulierungsrechts im Umfang des Stoffs der jeweiligen Vorlesung
Language: German	**Person responsible for module:** Prof. Dr. Christine Langenfeld Prof. Dr. Gerald Spindler, Prof. Dr. Andreas Wiebe, Prof. Dr. Torsten Körber
Course frequency: each semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: cf. examination regulations	**Recommended semester:**
Maximum number of students: not limited	

Georg-August-Universität Göttingen **Module S.RW.4105: Legal Tech: with digital competence to method competence**	6 C 2 WLH

Learning outcome, core skills: Nach erfolgreichem Absolvieren des Moduls „MdKzMk" • haben die Studierenden grundlegende Kenntnisse über digitale Kompetenzen, wie sie von der Kultusministerkonferenz in der Strategie „Bildung in der digitalen Welt" klassifiziert werden; • haben die Studierenden gelernt, die verschiedenen Typen von juristischen Methoden (Subsumtion, Auslegung, Gutachtenstil, Urteilsstil) zu differenzieren und können sie anwenden; • können die Studierenden in juristischen Kontexten Algorithmen erkennen und können sie formulieren; • können die Studierenden nach individueller Schulung zu den Anwendungen des Legal-Tech-Tools BRYTER auf Basis der vorstehenden Zielerreichung selbst ein Modul zum Wissenschafts- und Praxiseinsatz entwickeln; • können die Studierenden mit digitaler und Methodenkompetenz strukturierte Sequenzen zu Lösung eines juristischen Problems/ einer juristischen Aufgabenstellung planen und verwenden; • sind die Studierenden in der Lage, diese Resultate zu präsentieren und kommunizieren; • haben die Studierenden einen Einblick gewonnen in die digitale Entwicklung des Rechtsmarkts und die bestehende Möglichkeiten; • sind die Studierenden sensibilisiert für die Belange des Datenschutzes.	**Workload:** Attendance time: 28 h Self-study time: 152 h

Course: Legal Tech: mit digitaler Kompetenz zur Methodenkompetenz (Course)	2 WLH
Examination: Mündlich (ca. 15 Min.) oder Klausur (120 Min.) oder Hausarbeit (mind. 10 Seiten)	6 C

Examination requirements: Durch die Modulprüfung weisen die Studierenden nach, dass sie, • grundlegende Kenntnisse in digitaler und juristischer Methodenkompetenz haben, • und daher ein ausgewähltes juristisches Problem oder eine juristische Aufgabenstellung in Work-Flows mit allen Varianzen und/ oder zielführenden Ergänzungen mit einem Legal-Tech-Tool abbilden können, • kreativ und systematisch an die Erstellung eines Moduls zur bearbeiteten Thematik herangehen und dieses umsetzen und präsentieren können.	

Admission requirements: none	**Recommended previous knowledge:** none
Language: German	**Person responsible for module:** Katja Isabell Kohler
Course frequency: each semester	**Duration:** 1 semester[s]

Number of repeat examinations permitted:	Recommended semester:
cf. examination regulations	
Maximum number of students:	
not limited	

Georg-August-Universität Göttingen	3 C
Module SK.Bio-NF.7001: Neurobiology	2 WLH

Learning outcome, core skills:	**Workload:**
The students should acquire comprehension in form and function of neurons and their anatomical and physiological features (genetics, subcellular organization, resting membrane potential, action potential generation, stimulus conduction, transmitter release, ion channels, receptors, second messenger cascades, axonal transport). The students acquire knowledge of the physiological basics of sensory systems (olfactory, gustatory, acoustic, mechanosensory and visual perception) as well as motor control. Based on this the students educe understanding for the relation between neuronal circuits and simple modes of behavior (central pattern generators, reflexes, and taxis movements). The students should conceptually learn how neuronal connections are modified by experience (cellular mechanisms of learning and memory) and should learn different types of modification of behavior based on experience and neuronal substrates. The students should acquire fundamental insight into the organization and function of brains and autonomous nervous systems of mammals and invertebrates. The neurobiological basis of behavioral control (orientation, communication, circadian rhythm and sleep as well as motivation and metabolism) is explained. The students will learn physiological and cellular mechanisms of aging and of neurodegenerative diseases.	Attendance time: 30 h Self-study time: 60 h

Course: Neurobiology (Lecture)	2 WLH
Examination: Written examination (90 minutes)	3 C

Examination requirements:	
The students should have the ability to assess coherence and facts of statements from the field of neurobiology; they should be able to answer questions on the structure and function of neurons and neuronal circuits. Furthermore they should be able to describe and compare neuronal basics of behavioral control, their experience-dependent modification and conceptual mechanisms of complex behavior; they should be able to describe and compare physiological mechanisms of sensory perception and different sensory modalities; they should be able to describe physiological and cellular mechanisms of aging and of neurodegenerative diseases.	

Admission requirements:	**Recommended previous knowledge:**
none	Basic knowledge in Biology
Language:	**Person responsible for module:**
English	Prof. Dr. Andre Fiala
Course frequency:	**Duration:**
each summer semester	1 semester[s]
Number of repeat examinations permitted:	**Recommended semester:**
twice	4 - 6
Maximum number of students:	
30	

Additional notes and regulations:
The combination of this module with module SK.Bio.7001 is not possible.

Georg-August-Universität Göttingen **Module SK.Bio.305: Biostatistics with R**	3 C 2 WLH

Learning outcome, core skills: After successful completion of the module, the students are able to deal with the open statistics programming language R and to apply this language to biological data. They gained the ability to apply statistical methods like descriptive statistics, parametric and non-parametric two-random-sample tests, Chi-Quadrat test, correlation analysis, linear regression analysis and ANOVA.	**Workload:** Attendance time: 30 h Self-study time: 60 h

Course: Einführung in die Biostatistik mit R (Seminar)	2 WLH
Examination: Written examination (90 minutes) **Examination prerequisites:** continuous participation in the course; solved exercises **Examination requirements:** Independent analysis of biological data with the help of the programming language R; evaluation and practical application of basic statistical testing methods.	3 C

Admission requirements: none	**Recommended previous knowledge:** basic knowledge in mathematics and statistics
Language: German	**Person responsible for module:** Prof. Dr. Burkhard Morgenstern
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 5 - 6
Maximum number of students: 23	

Georg-August-Universität Göttingen	3 C
Module SK.Bio.356: Biological psychology II	2 WLH

Learning outcome, core skills:	**Workload:**
After passing the module, the students have a general understanding for the central processing of sensory information and the generation of motor-driven behavior. They acquired knowledge in the fields learning, memory, hormones, stress, concentration, chronobiology and homeostasis.	Attendance time: 28 h Self-study time: 62 h

Course: Biologische Psychologie II (Lecture)	2 WLH
Examination: Written examination (30 minutes) **Examination requirements:** The students should master the basics in biopsychology as taught in the lecture. They should have the ability to understand and describe connections between acquisition of cognitive skills, behavioral patterns and biological basics in neurobiology beyond the application of the learned facts and to apply their knowledge to new situations.	3 C

Admission requirements: 2FBA: at least 20 C from the biological introductory modules	**Recommended previous knowledge:** SK.Bio.355 Lecture "Biopsychologie I", basic knowledge in neuroscience
Language: German	**Person responsible for module:** Prof. Dr. Stefan Treue
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 3 - 5
Maximum number of students: 100	

Additional notes and regulations:
The combination of this module with module B.Bio.130 is not possible.

Georg-August-Universität Göttingen	3 C
Module SK.Bio.357: Biological psychology III	2 WLH

Learning outcome, core skills:	**Workload:**
The students acquire knowledge of advanced principles and concepts of neuroscientific biopsychology in the fields of the development of the nervous system, neuroplasticity, pain, multisensory integration, sensomotorics, sensory information processing, decision making, executive functions, attention, psychopharmacology, psychopathology.	Attendance time: 28 h Self-study time: 62 h

Course: Biologische Psychologie III (Lecture)	2 WLH
Examination: Written examination (60 minutes) **Examination requirements:** The students prove that they have achieved the above-mentioned learning objectives.	3 C

Admission requirements: none	**Recommended previous knowledge:** SK.Bio.355, SK.Bio.356
Language: German	**Person responsible for module:** Prof. Dr. Alexander Gail
Course frequency: each winter semester	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 3 - 5
Maximum number of students: 20	

Georg-August-Universität Göttingen **Module SK.DH.21: E-Learning**	3 C 2 WLH

Learning outcome, core skills: The students • are familiar with the common technologies used in the creation of e-learning components; • can apply their knowledge exemplarily to a specific e-learning unit; • demonstrate basic competence in the digital mediation of knowledge content and research questions in the humanities; • are able to break down complex problems of digital mediation into subtasks and process them in a solution-oriented manner; • are able to evaluate the results of fellow students and enrich them with their own ideas.	**Workload:** Attendance time: 28 h Self-study time: 62 h

Course: E-Learning (exercise or workshop)	2 WLH
Examination: Creation of an e-learning unit with written elaboration (max. 10 pages) **Examination requirements:** The students create a concept for a digital learning unit and implement it practically by applying selected tools of digital teaching (such as ILIAS) and reflecting on them in approaches. In doing so, they demonstrate advanced knowledge of the specific requirements of digital teaching in the humanities.	3 C

Admission requirements: none	**Recommended previous knowledge:** none
Language: German, English	**Person responsible for module:** Prof. Dr. Martin Langner
Course frequency: irregular	**Duration:** 1 semester[s]
Number of repeat examinations permitted: twice	**Recommended semester:** 3 - 5
Maximum number of students: 25
